BREACKING ADVANCES
3809 Highlights from Recent Cancer Literature

REVIEWS
3811 The Dormancy Dilemma: Quiescence versus Balanced Proliferation
Alan Wells, Linda Griffith, Jakob Z. Wells, and Donald P. Taylor

3817 Optimal Targeting of HER2–PI3K Signaling in Breast Cancer: Mechanistic Insights and Clinical Implications
Brent N. Rexer and Carlos L. Arteaga

CLINICAL STUDIES
3821 Combination of Protein Coding and Noncoding Gene Expression as a Robust Prognostic Classifier in Stage I Lung Adenocarcinoma
Ichiro Akagi, Hirokazu Okayama, Aaron J. Schetter, Ana I. Robles, Takashi Kohno, Elise D. Bowman, Dickran Kazandjian, Judith A. Welsh, Naohide Oue, Motonobu Saito, Masao Miyashita, Eiji Uchida, Toshihiro Takizawa, Seiichiro Takemoto, Aage Mollerup, Aage Haugen, Jun Yokota, and Curtis C. Harris

INTEGRATED SYSTEMS AND TECHNOLOGIES
3833 Coevolution of Solid Stress and Interstitial Fluid Pressure in Tumors During Progression: Implications for Vascular Collapse
Triantafyllis Stylianopoulos, John D. Martin, Matija Smuder, Fotios Mpekris, Saloni R. Jain, and Rakesh K. Jain

MICROENVIRONMENT AND IMMUNOLOGY
3842 Avirulent Toxoplasma gondii Generates Therapeutic Antitumor Immunity by Reversing Immunosuppression in the Ovarian Cancer Microenvironment
Jason R. Baird, Barbara A. Fox, Kiah L. Sanders, Patrick H. Lizotte, Juan R. Cubillos-Ruiz, Uciane K. Scarlett, Melanie R. Rutkowski, Jose R. Conejo-Garcia, Steven Fiering, and David J. Bzik

Precise: Beginning with Coley’s investigations a century ago, the immunotherapeutic properties of bacterial infections in cancer have been widely studied, but there has been virtually no study yet of the same potential in protist (parasite) infections, a first glimpse of which are illustrated in this seminal report.

3852 Critical Role of STAT3 in IL-6–Mediated Drug Resistance in Human Neuroblastoma
Tasnim Ara, Rie Nakata, Michael A. Sheard, Hiroyuki Shimada, Ralf Buettner, Susan G. Grosen, Liqyung Ji, Hua Yu, Richard Jove, Robert C. Seeger, and Yves A. DeClerck

Precise: Drug resistance pathways in cancer are not necessarily confined to the cancer cell itself but may often also involve critical contributions of the pro-inflammatory tumor microenvironment, as shown in this study.

3865 Synergistic Induction of Adaptive Antitumor Immunity by Codelivery of Antigen with α-Galactosylceramide on Exosomes
Ulf Gehrmann, Stefanie Hiltbrunner, Anna-Maria Georgoudaki, Mikael C. Karlsson, Tanja I. Näsland, and Susanne Gabrielsi

Precise: Loading exosomes with tumor antigens and immune stimulatory glycolipids can create a highly efficacious vaccine preparation for cancer therapy.

3877 Melanoma-Educated CD14+ Cells Acquire a Myeloid-Derived Suppressor Cell Phenotype through COX-2–Dependent Mechanisms
Yuneng Mao, Isabel Poschke, Erik Wennerberg, Yago Pico de Coaña, Suzanne Eghyazi Brage, Inkeri Schultz, Johan Hansson, Giuseppe Masucci, Andreas Lundqvist, and Rolf Kiessling

Precise: These results reveal how immune suppression by myeloid-derived suppressor cells can be initiated in the tumor microenvironment of human melanoma.
Identification of Two Distinct Carcinoma-Associated Fibroblast Subtypes with Differential Tumor-Promoting Abilities in Oral Squamous Cell Carcinoma

Daniela Elena Costea, Allison Hills, Amani H. Osman, Johanna Thurlow, Gabriela Kalna, Xiaoqiong Huang, Claudia Penn Murillo, Himalaya Parajuli, Salwa Suliman, Keerthi K. Kulasekara, Anne Chr. Johannessen, and Max Partridge

Précis: Cancer-associated fibroblasts sustain the tumor microenvironment, and unraveling their heterogeneity may point to targetable weaknesses.

Myeloid Cell Receptor LRP1/CD91 Regulates Monocyte Recruitment and Angiogenesis in Tumors

Nicole D. Staudt, Minji Jo, Jingjing Hu, Jeanne M. Bristow, Donald P. Pizzo, Alban Gaultier, Scott R. VandenBerg, and Steven L. Gonias

Précis: A signaling system that controls recruitment of tumor-associated macrophages may have a very important role in determining the amount of VEGF that is secreted into the tumor microenvironment.

miR-124 Inhibits STAT3 Signaling to Enhance T Cell–Mediated Immune Clearance of Glioma

Jun Wei, Fei Wang, Ling-Yuan Kong, Shao Xu, Tiffany Doucette, Sherise D. Ferguson, Yuhui Yang, Kayla McEnery, Krishan Jethwa, Olsi Gjyshi, Wei Qiao, Nicholas B. Levine, Frederick F. Lang, Ganesh Rao, Gregory N. Fuller, George A. Calin, and Amy B. Heimberger

Précis: This study highlights approaches to plumb the untapped potential of microRNA in generalized immunotherapeutic strategies to treat cancer.

Dynamic Mast Cell–Stromal Cell Interactions Promote Growth of Pancreatic Cancer

Ying Ma, Rosa F. Hwang, Craig D. Logsdon, and Stephen E. Ullrich

Précis: Mast cells are being ascribed unexpected but important roles in the cancer microenvironment, increasing interest in targeting them for therapeutic purposes.

Membrane versus Soluble Isoforms of TNF-α Exert Opposing Effects on Tumor Growth and Survival of Tumor-Associated Myeloid Cells

Shidrokh Ardestani, Bin Li, Desiree L. Deskins, Huiyun Wu, Pierre L. Massion, and Pampee P. Young

Précis: Controversies about the role of TNF-α in cancer progression may be explained by the findings from this study, which offer a basis to understand its contradictory effects on tumor progression.

SEN1 deSUMOylates and Regulates Pin1 Protein Activity and Cellular Function

Chun-Hau Chen, Che-Chang Chang, Tae Ho Lee, ManLj Luo, Pengyu Huang, Pei-Hsin Liao, Shao Wei, Fu-An Li, Ruey-Hwa Chen, Xiao Zhen Zhou, Hsiu-Ming Shih, and Kun Ping Lu

Précis: Unraveling Pin1 regulation may improve strategies to attack cancer, given that Pin1 controls the function of numerous oncogenes and tumor suppressor genes.

Endothelial Cell Protein C Receptor Opposes Mesothelioma Growth Driven by Tissue Factor

Shiva Keshava, Sanghamitra Sahoo, Torry A. Tucker, Steven Idell, L. Vijaya Mohan Rao, and Usha R. Pendurthi

Précis: This study enhances our understanding of how the procoagulant protein tissue factor drives the growth of many human cancers.

Mitogenic Insulin Receptor-A Is Overexpressed in Human Hepatocellular Carcinoma due to EGFR-Mediated Dysregulation of RNA Splicing Factors

Hamza Chettouh, Laetitia Fartoux, Lynda Aoudjehane, Dominique Wendum, Audrey Clapéron, Yves Chrétien, Colette Rey, Olivier Scatton, Olivier Soubrane, Filomena Conti, Françoise Praz, Chantal Housset, Olivier Rosmorduc, and Christèle Desbois-Mouthon

Précis: Increased expression of a specific insulin receptor isoform may mediate adverse effects of hyperinsulinemia on liver cancer development.

Dysregulated Expression of FOXM1 Isoforms Drives Progression of Pancreatic Cancer

Xiangyu Kong, Lei Li, Zhaoshen Li, Xiangdong Le, Chen Huang, Zhiliang Jia, Jiujie Cui, Suyun Huang, Liwei Wang, and Keping Xie

Précis: This study identifies a class of FOXO family transcription factors as key effectors in a program of pancreatic cancer development driven by the transcription factors Sp1 and KLH4, with potential implications for understanding the pathophysiology of other cancers in which these FOXO isoforms have been implicated.

ABOUT THE COVER

CD44, a cancer stem-like cell marker, has been implicated in cancer cell migration, invasion, and metastasis. This study shows that CD44 expression in cancer cells promotes bone metastases by enhancing tumorigenicity, cell migration and invasion, and production of hyaluronan, the primary ligand for CD44. Using a mouse model of bone metastasis, it was found that 4-methylumbelliferone, an inhibitor of hyaluronan synthesis, inhibited bone metastases of MDA-MB-231 human breast cancer cells with reduced number of osteoclasts. For details, see article by Hiraga and colleagues on page 4112.
