**Contents**

**BREAKING ADVANCES**

4595 Highlights from Recent Cancer Literature

**OBITUARY**

4597 Emil Frei III, MD: In Memoriam (1924–2013)

**REVIEWS**

4599 A Road Map to Comprehensive Androgen Receptor Axis Targeting for Castration-Resistant Prostate Cancer
   Nicholas Mitsiades
4606 Myeloid-Derived Suppressor Cells as Osteoclast Progenitors: A Novel Target for Controlling Osteolytic Bone Metastasis
   Anandi Sawant and Selvarangan Ponnazhagan

**PERSPECTIVE**

4611 Cancer Research Advocacy: Past, Present, and Future
   Jane Perlmutter, Shannon K. Bell, and Gwen Darien

**INTEGRATED SYSTEMS AND TECHNOLOGIES**

4616 Quantitative In Vivo Characterization of Intracellular and Extracellular pH Profiles in Heterogeneous Tumors: A Novel Method Enabling Multiparametric pH Analysis
   Norbert W. Lutz, Yann Le Fur, Johanna Chiche, Jacques Pouyssegur, and Patrick J. Cozzone

**MICROENVIRONMENT AND IMMUNOLOGY**

4629 Tumor Promotion by Intratumoral Plasmacytoid Dendritic Cells Is Reversed by TLR7 Ligand Treatment
   Isabelle Le Mercier, Dominique Poujol, Amélie Sanlaville, Vanja Sisirak, Michael Gobert, Isabelle Durand, Bertrand Dubois, Isabelle Treilleux, Jacqueline Marvel, Jaromir Vlach, Jean-Yves Blay, Nathalie Bendriess-Vermare, Christophe Caux, Isabelle Puisieux, and Nadège Goutagny
   *Précis*: This study suggests a new use in breast cancer treatment for synthetic ligands of TLR7 like imiquimod that are used widely as immunomodulators in clinic.

4641 Vaccine-Instructed Intratumoral IFN-γ Enables Regression of Autochthonous Mouse Prostate Cancer in Allogeneic T-Cell Transplantation
   Rodrigo Hess Michelini, Teresa Manzo, Tabea Sturmheit, Veronica Basso, Martina Rocchi, Massimo Freschi, Joanna Listopad, Thomas Blankenstein, Matteo Bellone, and Anna Mondino
   *Précis*: Findings argue that cancer vaccines that improve antitumor T-cell responses can cooperate strongly with allogeneic bone marrow transplants to convert them into effective treatments for solid tumors.

4653 IL-18–Primed Helper NK Cells Collaborate with Dendritic Cells to Promote Recruitment of Effector CD8⁺ T Cells to the Tumor Microenvironment
   Jeffrey L. Wong, Erik Berk, Robert P. Edwards, and Pawel Kalinski
   *Précis*: Results advance understanding of how NK cells can provide an initial stimulus to orchestrate the attraction of dendritic cells and additional effector cells into the cancer microenvironment.

4663 Potent Immunomodulatory Effects of the Trifunctional Antibody Catumaxomab
   Diane Goëri, Caroline Flament, Sylvie Busakiewicz, Vichnou Poitier-Colame, Oliver Kepp, Isabelle Martins, Julien Pesquet, Alexander Eggermont, Dominique Elias, Nathalie Chaput, and Laurence Zitvogel
   *Précis*: This study reports a comprehensive dissection of the immunomodulatory effects of a bispecific mAb specific for a widely expressed tumor cell adhesion molecule and the T-cell molecule CD3, which is one of the first bispecific mAbs to be explored in clinic.
Histone Demethylase RBP2 Promotes Lung Tumorigenesis and Cancer Metastasis

Yu-Ching Teng, Cheng-Feng Lee, Ying-Shiau Li, Yi-Ren Chen, Pei-Wen Hsiao, Meng-Yu Chan, Meng-Daw Tsai, and Li-Jung Juan

Precis: Findings establish an oncogenic function in lungs for an Rb binding protein that modifies chromatin, with implications for malignant progression in this tissue.

Proteomic and Lipidomic Signatures of Lipid Metabolism in NASH-Associated Hepatocellular Carcinoma

Kyle Muir, Antoni兹m Hazim, Ying He, Marlon Peyressatre, Do-Young Kim, Xiaoling Song, and Laura Beretta

Precis: This study reveals a role for lipid-modifying enzymes in liver cancer, identifying in particular a specific type of long-chain polyunsaturated fatty acid participating in nonalcoholic steatohepatitis and liver cancer risk.

Intravital FLIM-FRET Imaging Reveals Dasatinib-Induced Spatial Control of Src in Pancreatic Cancer

Precis: Defining the spatial and temporal factors that limit drug targeting in live tumors could help optimize the preclinical development of new therapeutic agents.

PLZF Confers Effector Functions to Donor T Cells That Preserve Graft-versus-Tumor Effects while Attenuating GVHD

Arnav Ghosh, Amanda M. Holland, Yildirim Dogan, Nury L. Yim, Uttam K. Rao, Lauren F. Young, Mallory L. West, Natalie V. Singer, Hae Lee, Il-Kang Na, Jennifer J. Tsai, Robert R. Jeng, Olaf Penack, Alan M. Hanash, Cecilia Lezcano, George F. Murphy, Chen Liu, Michel Sadelaïn, Martin G. Sauer, Derek Sant’Angelo, and Marcel R.M. van den Brink

Precis: This study describes a strategy to improve the qualities of adoptive cell therapies that are allogeneic T cells for immune treatment of cancer, focusing particularly on the reduction of undesirable graft-versus-host side effects.

Progesterone Receptor Signaling in the Microenvironment of Endometrial Cancer Influences Its Response to Hormonal Therapy

Deanna M. Janzen, Miguel A. Rosales, Daniel Y. Paik, Daniel S. Lee, Daniel A. Smith, Owen N. Witte, M. Luisa Iruela-Arispe, and Sanaz Memarzadeh

Precis: Striking findings show that the efficacy of hormonal therapy in endometrial cancer is not related to effects on cancer cells, but rather to effects on stromal cells where the progesterone receptor is necessary and sufficient to mediate antitumor effects in the microenvironment.

Posttranscriptional Regulation of PER1 Underlies the Oncogenic Function of IRE1α

Precis: Circadian rhythms that may affect chemotherapeutic efficacy are linked here for the first time to the unfolded protein response, a signaling pathway widely activated in cancer that plays an important role in tumor aggressiveness.

Peroxiredoxin-2 Represses Melanoma Metastasis by Increasing E-Cadherin/ß-Catenin Complexes in Adherens Junctions

Doo Jae Lee, Dong Hoon Kang, Mina Choi, Yang Ji Choi, Joo Young Lee, Joo Hyun Park, Yoon Jung Park, Kyung Wha Lee, and Sang Won Kang

Precis: In discovering a specific antioxidant enzyme that can repress melanoma metastasis, this study also suggests a tractable new direction to treat this deadly disease.

TR3 Modulates Platinum Resistance in Ovarian Cancer

Andrew J. Wilson, Annie Y. Liu, Joseph Roland, Oluwafunmilayo A. Adebayo, Sarah A. Fletcher, James C. Slaughter, Jeanette Saskowski, Marta A. Crispens, Howard W. Jones III, Samuel James, Oluwafunmilayo B. Adebayo, Sarah A. Fletcher, Andrew J. Wilson, Annie Y. Liu, Joseph Roland, James C. Slaughter, Jeanette Saskowski, Marta A. Crispens, Howard W. Jones III, Samuel James, Oluwafunmilayo B. Adebayo, Sarah A. Fletcher, and Michael W. Jones

Precis: There remains great interest in determining general strategies to overcome resistance to platinum compounds that are used very widely to treat cancer, including ovarian cancer.
Genetic Ablation of the Fatty Acid-Binding Protein FABP5 Suppresses HER2-Induced Mammary Tumorigenesis

Liraz Levi, Glenn Lobo, Mary Kathryn Doud, Johannes von Lintig, Darcie Seachrist, Gregory P. Tochrop, and Noa Noy

Precise: A protein that delivers fatty acids to the transcription factor PPARY is critical for mammary tumor development, rationalizing the development of FABP5 inhibitors to prevent or treat breast cancer.

PanIN-Specific Regulation of Wnt Signaling by HIF2α during Early Pancreatic Tumorigenesis

Angela Criscimanna, Li-Juan Duan, Julie A. Rhodes, Volker Fendrich, Emily Wickline, Douglas J. Hartman, Satdarshan P.S. Monga, Michael T. Lotze, George K. Gittes, Guo-Hua Fong, and Farzad Esni

Precise: This study identifies root signaling connections between hypoxia control and the Wnt and Smad4 pathways in early development of pancreatic cancer.

Enhanced Radiation Sensitivity in HPV-Positive Head and Neck Cancer

Precise: Activation of residual p53 in HPV+ head and neck cancers may explain why this type of disease has a relatively better outcome in patients.

Pathway-Based Serum microRNA Profiling and Survival in Patients with Advanced Stage Non–Small Cell Lung Cancer

Yan Wang, Jian Gu, Jack A. Roth, Michelle A.T. Hildebrandt, Scott M. Lippman, Yuanqing Ye, John D. Minna, and Xifeng Wu

Precise: Accumulating evidence argues that microRNA signatures derived from blood serum may offer simple quantitative tools for clinical prognosis and therapeutic development in many settings.

A 20-Year Prospective Study of Plasma Prolactin as a Risk Marker of Breast Cancer Development

Shelley S. Tworoger, A. Heather Eliassen, Xuehong Zhang, Jing Qian, Patrick M. Slass, Bernard A. Rosner, and Susan E. Hankinson

Precise: Elevated levels of plasma prolactin are associated with an increased risk of breast cancer, but only for 10 years after assessment of this risk marker, supporting a role for prolactin at later stages in breast carcinogenesis.
Aptamer Identification of Brain Tumor–Initiating Cells
Youngmi Kim, Qulian Wu, Petra Hamerlik, Masahiro Hitomi, Andrew E. Sloan, Gene H. Barnett, Robert J. Weil, Patrick Leahy, Anita B. Hjelmeland, and Jeremy N. Rich

Precis: This work illustrates a general method to prospectively isolate tumor-initiating cells, the imaging and targeting of which may be important for improving therapeutic outcomes in individual patients.

Loss of p120-Catenin Induces Metastatic Progression of Breast Cancer by Inducing Anoikis Resistance and Augmenting Growth Factor Receptor Signaling
Ron C.J. Schackmann, Sjoerd Klarenbeek, Eva J. Vlug, Suzan Stelloo, Miranda van Amersfoort, Milou Tenhagen, Tanya M. Braumuller, Jeroen F. Vermeulen, Petra van der Groep, Ton Peeters, Elsken van der Wall, Paul J. van Diest, Jos Jonkers, and Patrick W.B. Derksen

Precis: Based on conditional mouse models of metastatic breast cancer that are immunocompetent and clinically relevant, the current study provides an alternate rationale for therapeutic intervention of p120-catenin negative invasive breast cancer.

TRAF6 Upregulates Expression of HIF-1α and Promotes Tumor Angiogenesis
Heng Sun, Xue-Bing Li, Ya Meng, Li Fan, Min Li, and Jing Fang

Precis: A factor well studied in the TNF response and implicated in innate and adaptive immune control is established in this study to control tumor angiogenesis.
ABOUT THE COVER

Schematic representation of the IRE1α-dependent activation loop that controls tumor cell adaptation. Tumor cell is presented in light gray, stromal cells in dark gray. Proteins are represented by circles, with upregulation in green and downregulation in red. Connections following stress-mediated activation of IRE1α are presented in green for activation and red for inhibition. For details, see article by Pluquet and colleagues on page 4732.
