BREAKING ADVANCES
5607
Highlights from Recent Cancer Literature

REVIEWS
5609
Circular RNA and miR-7 in Cancer
Thomas B. Hansen, Jørgen Kjems, and Christian K. Damgaard

5613
Antitumor Immunity: Easy as 1, 2, 3 with Monoclonal Bispecific Trifunctional Antibodies?
John Maher and Antonella A. Adami

PERSPECTIVE
5618
The Relationship between Tumor Blood Flow, Angiogenesis, Tumor Hypoxia, and Aerobic Glycolysis
Leif Østergaard, Anna Tietze, Thomas Nielsen, Kim Ryun Drasbek, Kim Mouridsen, Sune Norhøj Jespersen, and Michael R. Horsman

PRIORITY REPORT
5625
A Novel Algorithm for Simplification of Complex Gene Classifiers in Cancer

PRÉCIS: This study presents a computational tool capable of distilling metagenes and other complex classifiers down to as few as two genes, facilitating the use of molecular signatures in clinical testing.

MOLECULAR AND CELLULAR PATHOBIOLOGY
5682
Reg3β Deficiency Impairs Pancreatic Tumor Growth by Skewing Macrophage Polarization
Meritxell Gironella, Carlos Calvo, Anna Fernández, Daniel Closa, Juan L. Iovanna, Joan Rosello-Catafau, and Emma Folch-Puy

PRÉCIS: The findings reported in this article may guide further clinical research based on the inhibition of the Reg3β in the treatment pancreatic cancer.

MICROENVIRONMENT AND IMMUNOLOGY
5633
Infiltrating Macrophages Promote Prostate Tumorigenesis via Modulating Androgen Receptor-Mediated CCL4–STAT3 Signaling
Lei-Ya Fang, Kouji Iizumi, Kuo-Pao Lai, Liang Liang, Lei Li, Hiroshi Miyamoto, Wen-Jye Lin, and Chawshaung Chang

PRÉCIS: These important findings establish that androgen receptor signaling drives the development of early prostate tumors by modulating the function of infiltrating macrophages in the microenvironment, with attendant effects on downstream inflammatory signaling.

<td>5695</td>
<td>Oncogenic Herpesvirus HHV-8 Promotes Androgen-Independent Prostate Cancer Growth</td>
<td>Justin G. Mygatt, Adit Singhal, Gauthaman Sukumar, Clifton L. Dalgard, and Johnan A.R. Kaleeba</td>
<td>Précis: This provocative study prompts deeper investigations of the relationship between infection with human herpesvirus 8 (HHV-8) and risks of advanced prostate cancer, given findings that HHV-8 infection of primary prostate epithelial cells can drive several features of androgen-independent metastatic disease.</td>
</tr>
<tr>
<td>5719</td>
<td>Epimorphin Is a Novel Regulator of the Progesterone Receptor Isoform-A</td>
<td>Jamie L. Bascom, Derek C. Radisky, Eileen Koh, Jimmie E. Fata, Alvin Lo, Hitoyoshi Mori, Neda Roosta, Yohei Hirai, and Mina J. Bissell</td>
<td>Précis: This study offers new insights into control of the expression of the progesterone receptor, a key driver and prognostic determinant in hormone-dependent breast cancers.</td>
</tr>
<tr>
<td>5730</td>
<td>Rapid Induction of Lung Adenocarcinoma by Fibroblast Growth Factor 9 Signaling through FGFR</td>
<td>Yongjun Yin, Tomoko Betsuyaku, Joel R. Garbow, Jinbai Miao, Ramaswamy Govindan, and David M. Ornitz</td>
<td>Précis: These findings highlight a mouse model of lung adenocarcinomas that form near the bronchioalveolar duct junction that may be useful to evaluate a growing number of experimental anticancer drugs that interfere with FGFR signaling.</td>
</tr>
<tr>
<td>5742</td>
<td>Akt SUMOylation Regulates Cell Proliferation and Tumorigenesis</td>
<td>Rong Li, Jie Wei, Cong Jiang, Dongmei Liu, Lu Deng, Kai Zhang, and Ping Wang</td>
<td>Précis: This important study reveals a fundamental feature for controlling the function of Akt, which is broadly activated in many human cancers where it contributes to survival, invasion, and therapeutic resistance.</td>
</tr>
<tr>
<td>5754</td>
<td>c-Kit Is Suppressed in Human Colon Cancer Tissue and Contributes to L1-Mediated Metastasis</td>
<td>Nancy Gavert, Anna Shvab, Michal Sheffer, Amir Ben-Shmuel, Gal Haase, Eszter Bakos, Eytan Domany, and Avri Ben-Ze'ev</td>
<td>Précis: This report challenges the paradigm of c-Kit as an oncogene in demonstrating the importance of its suppression in colorectal cancer for its metastasis to liver, the most common site for dissemination of this disease.</td>
</tr>
<tr>
<td>5764</td>
<td>Src Family Kinases as Novel Therapeutic Targets to Treat Breast Cancer Brain Metastases</td>
<td>Siyuan Zhang, Wen-Chien Huang, Lin Zhang, Chenyu Zhang, Frank J. Lowery, Zhaoxi Ding, Hua Guo, Hai Wang, Suyun Huang, Aysegul A. Sahin, Kenneth D. Aldape, Patricia S. Steeg, and Dihua Yu</td>
<td>Précis: Inhibitors of Src family tyrosine kinases that have been examined clinically might have excellent prospects for treatment of brain metastases of breast cancer, a deadly and untreatable step in disease progression occurring in many patients with advanced disease.</td>
</tr>
<tr>
<td>5775</td>
<td>KIT Signaling Governs Differential Sensitivity of Mature and Primitive CML Progenitors to Tyrosine Kinase Inhibitors</td>
<td>Annie S. Corbin, Thomas O’Hare, Zhimin Gu, Ira L. Kraft, Anna M. Eiring, Jamshid S. Khorashad, Anthony D. Pomicter, Tian Y. Zhang, Christopher A. Eide, Paul W. Manley, Jorge E. Cortes, Brian J. Druker, and Michael W. Deininger</td>
<td>Précis: These findings may explain the limited effects that imatinib (Gleevec) has on CML progenitors, a long-standing question that appears to relate to KIT as a core element for understanding therapeutic responses to this iconic drug.</td>
</tr>
<tr>
<td>5787</td>
<td>Targeting ERBB Receptors Shifts Their Partners and Triggers Persistent ERK Signaling through a Novel ERBB/EFNB1 Complex</td>
<td>Paolo D. Vermeer, Paul L. Colbert, Bryant G. Wiekling, Daniel W. Vermeer, and John H. Lee</td>
<td>Précis: This study provides a mechanistic explanation for why EGFR targeting drugs work poorly in head and neck carcinoma despite common involvement of EGFR in this cancer.</td>

THERAPEUTICS, TARGETS, AND CHEMICAL BIOLOGY
Stem Cell Differentiation and Lumen Formation in Colorectal Cancer Cell Lines and Primary Tumors
Neil Ashley, Trevor M. Yeung, and Walter F. Bodmer

Precisé: An in vitro model for functional characterization of colorectal stem-like cells and their differentiation also offers applications to enable high-throughput screening for novel anticancer compounds.

Breast Tumor Kinase (Brk/PTK6) Is a Mediator of Hypoxia-Associated Breast Cancer Progression
Tarah M. Regan Anderson, Danielle L. Peacock, Andrea R. Daniel, Gregory K. Hubhard, Kristopher A. Lofgren, Brian J. Girard, Alexandra Schörg, David Hoogewijs, Roland H. Wenger, Tiffany N. Seagroves, and Carol A. Lange

Precisé: These findings define a kinase-based mechanism that drives the aggressive behavior of triple-negative breast cancers, which may offer a tractable target for therapy in this challenging disease.

ANTXR1, a Stem Cell-Enriched Functional Biomarker, Connects Collagen Signaling to Cancer Stem-like Cells and Metastasis in Breast Cancer
Daohong Chen, Poornima Bhat-Nakshatri, Chirayu Goswami, Sunil Badve, and Harikrishna Nakshatri

Precisé: These findings illuminate functional links between the tumor microenvironment and stemness functions that contribute to metastatic progression, with potential implications for understanding breast cancer pathophysiology and therapy.

Comparative Expression Analysis Reveals Lineage Relationships between Human and Murine Gliomas and a Dominance of Glial Signatures during Tumor Propagation In Vitro

Precisé: The brain tumor microenvironment strongly modifies tumor genetics that initiate disease, ultimately directing the pathway for growth dynamics, histology, and therapeutic responsiveness of brain tumors, with implications for understanding how to properly model and treat disease more effectively.

Correction: Quantitative In Vivo Characterization of Intracellular and Extracellular pH Profiles in Heterogeneous Tumors: A Novel Method Enabling Multiparametric pH Analysis

ABOUT THE COVER

The importance of natural killer (NK) cells for eradicating cancer cannot be overemphasized. It was found that the tumor environment impairs the development and function of NK cells and even diminishes the number of NK cells in patients with chronic myelogenous leukemia. Here, Park and colleagues show that a part of CD11b<sup>high</sup>CD27<sup>high</sup> NK cells obtained from tumor-bearing mice were converted into CD11b<sup>+</sup>Gr1<sup>+</sup> MDSC phenotype by GM-CSF, while the phenotype of NK cells was retained in the presence of IL-2. For details, see article by Park and colleagues on page 5669.
