**Breaking Advances**

5607 Highlights from Recent Cancer Literature

**Reviews**

5609 Circular RNA and miR-7 in Cancer
Thomas B. Hansen, Jørgen Kjems, and Christian K. Damgaard

5613 Antitumor Immunity: Easy as 1, 2, 3 with Monoclonal Bispecific Trifunctional Antibodies?
John Maher and Antonella A. Adami

**Perspective**

5618 The Relationship between Tumor Blood Flow, Angiogenesis, Tumor Hypoxia, and Aerobic Glycolysis
Leif Østergaard, Anna Tietze, Thomas Nielsen, Kim Ryun Drasbek, Kim Mouridsen, Sune Nurhaj Jespersen, and Michael R. Horsman

**Priority Report**

5625 A Novel Algorithm for Simplification of Complex Gene Classifiers in Cancer

**Microenvironment and Immunology**

5633 Infiltrating Macrophages Promote Prostate Tumorigenesis via Modulating Androgen Receptor-Mediated CCL4–STAT3 Signaling
Lei-Ya Fang, Kouji Izumi, Kuo-Pao Lai, Liang Liang, Lei Li, Hiroshi Miyamoto, Wen-Jye Lin, and Chawshen Chang

**MOLECULAR AND CELLULAR PATHOBIOLOGY**

5682 Reg3β Deficiency Impairs Pancreatic Tumor Growth by Skewing Macrophage Polarization
Meritxell Gironella, Carlos Calvo, Anna Fernández, Daniel Closa, Juan L. Iovanna, Joan Rosello-Catafau, and Emma Folch-Puy

**Contents**

Cancer Research

September 15, 2013 • Volume 73 • Number 18
Oncogenic Herpesvirus HHV-8 Promotes Androgen-Independent Prostate Cancer Growth
Justin G. Mygatt, Adit Singhal, Gauthaman Sukumar, Clifton L. Dalgar, and Johnan A.R. Kaleeba
Précis: This provocative study prompts deeper investigations of the relationship between infection with human herpesvirus 8 (HHV-8) and risks of advanced prostate cancer, given findings that HHV-8 infection of primary prostate epithelial cells can drive several features of androgen-independent metastatic disease.

SOX10 Ablation Arrests Cell Cycle,Induces Senescence, and Suppresses Melanomagenesis
Julia C. Cronin, Dawn E. Watkins-Chow, Art Incaco, Joanne H. Hasskamp, Nicola Schonewolf, Lauren G. Aoude, Nicholas K. Hayward, Boris C. Bastian, Reinhard Dummer, Stacie K. Loftus, and William J. Pavan
Précis: Definition of a core determining factor for cell-cycle control in melanoma suggests a rational new direction for targeted treatment or prevention of this disease.

Epimorphin Is a Novel Regulator of the Progesterone Receptor Isoform-A
Jamie L. Bascom, Derek C. Radisky, Eileen Koh, Jimmie E. Fata, Alvin Lo, Hidetoshi Mori, Neda Roosta, Yohei Hirai, and Mina J. Bissell
Précis: This study offers new insights into control of the expression of the progesterone receptor, a key driver and prognostic determinant in hormone-dependent breast cancers.

Rapid Induction of Lung Adenocarcinoma by Fibroblast Growth Factor 9 Signaling through FGF Receptor 3
Yongjun Yin, Tomoko Betsuyaku, Joel R. Garbow, Jinbai Miao, Ramaswamy Govindan, and David M. Ornitz
Précis: These findings highlight a mouse model of lung adenocarcinomas that form near the bronchioalveolar duct junction that may be useful to evaluate a growing number of experimental anticancer drugs that interfere with FGF signaling.

Akt SUMOylation Regulates Cell Proliferation and Tumorigenesis
Rong Li, Jie Wei, Cong Jiang, Dongmei Liu, Lu Deng, Kai Zhang, and Ping Wang
Précis: This important study reveals a fundamental feature for controlling the function of Akt, which is broadly activated in many human cancers where it contributes to survival, invasion, and therapeutic resistance.

c-Kit Is Suppressed in Human Colon Cancer Tissue and Contributes to IL-1-Mediated Metastasis
Nancy Gavert, Anna Shvab, Michal Sheffer, Amir Ben-Shmuel, Gal Haase, Ezster Bakos, Eytan Domany, and Avri Ben-Ze’ev
Précis: This report challenges the paradigm of c-Kit as an oncogene in demonstrating the importance of its suppression in colorectal cancer for its metastasis to liver, the most common site for dissemination of this disease.

Src Family Kinases as Novel Therapeutic Targets to Treat Breast Cancer Brain Metastases
Siyuan Zhang, Wen-Chien Huang, Lin Zhang, Chenyu Zhang, Frank J. Lowery, Zhaoxu Ding, Hua Guo, Hai Wang, Suyun Huang, Aysegul A. Sahin, Kenneth D. Aldape, Patricia S. Steeg, and Dihua Yu
Précis: Inhibitors of Src family tyrosine kinases that have been examined clinically might have excellent prospects for treatment of brain metastases of breast cancer, a deadly and untreatable step in disease progression occurring in many patients with advanced disease.

KIT Signaling Governs Differential Sensitivity of Mature and Primitive CML Progenitors to Tyrosine Kinase Inhibitors
Amie S. Corbin, Thomas O’Hare, Zhimin Gu, Ira L. Kraft, Anna M. Eiring, Jamshid S. Khorashad, Anthony D. Pomicter, Tian Y. Zhang, Christopher A. Eide, Paul W. Manley, Jorge E. Cortes, Brian J. Druker, and Michael W. Deininger
Précis: These findings may explain the limited effects that imatinib (Gleevec) has on CML progenitors, a long-standing question that appears to relate to KIT as a core element for understanding therapeutic responses to this iconic drug.

Targeting ERBB Receptors Shifts Their Partners and Triggers Persistent ERK Signaling through a Novel ERBB/EFNB1 Complex
Paola D. Vermeer, Paul L. Colbert, Bryant G. Wieking, Daniel W. Vermeer, and John H. Lee
Précis: This study provides a mechanistic explanation for why EGFR targeting drugs work poorly in head and neck carcinoma despite common involvement of EGFR in this cancer.
Stem Cell Differentiation and Lumen Formation in Colorectal Cancer Cell Lines and Primary Tumors

Neil Ashley, Trevor M. Yeung, and Walter F. Bodmer

Précis: An in vitro model for functional characterization of colorectal stem-like cells and their differentiation also offers applications to enable high-throughput screening for novel anticancer compounds.

Breast Tumor Kinase (Brk/PTK6) Is a Mediator of Hypoxia-Associated Breast Cancer Progression

Tarah M. Regan Anderson, Danielle L. Peacock, Andrea R. Daniel, Gregory K. Hubbard, Kristopher A. Lofgren, Brian J. Girard, Alexandra Schorg, David Hoogewijs, Roland H. Wenger, Tiffany N. Seagroves, and Carol A. Lange

Précis: These findings define a kinase-based mechanism that drives the aggressive behavior of triple-negative breast cancers, which may offer a tractable target for therapy in this challenging disease.

ANTXR1, a Stem Cell-Enriched Functional Biomarker, Connects Collagen Signaling to Cancer Stem-like Cells and Metastasis in Breast Cancer

Daohong Chen, Poornima Bhat-Nakshatri, Chirayu Goswami, Sunil Badve, and Harikrishna Nakshatri

Précis: These findings illuminate functional links between the tumor microenvironment and stemness functions that contribute to metastatic progression, with potential implications for understanding breast cancer pathophysiology and therapy.

Comparative Expression Analysis Reveals Lineage Relationships between Human and Murine Gliomas and a Dominance of Glial Signatures during Tumor Propagation In Vitro

Précis: The brain tumor microenvironment strongly modifies tumor genetics that initiate disease, ultimately directing the pathway for growth dynamics, histology, and therapeutic responsiveness of brain tumors, with implications for understanding how to properly model and treat disease more effectively.

Correction: Quantitative In Vivo Characterization of Intracellular and Extracellular pH Profiles in Heterogeneous Tumors: A Novel Method Enabling Multiparametric pH Analysis

ABOUT THE COVER

The importance of natural killer (NK) cells for eradicating cancer cannot be overemphasized. It was found that the tumor environment impairs the development and function of NK cells and even diminishes the number of NK cells in patients with chronic myelogenous leukemia. Here, Park and colleagues show that a part of CD11b<sup>hi</sup>CD27<sup>hi</sup> NK cells obtained from tumor-bearing mice were converted into CD11b<sup>+</sup>Gr1<sup>+</sup> MDSC phenotype by GM-CSF, while the phenotype of NK cells was retained in the presence of IL-2. For details, see article by Park and colleagues on page 5669.
