**BREAKING ADVANCES**

5607  
*Highlights from Recent Cancer Literature*

**REVIEWS**

5609  
*Circular RNA and miR-7 in Cancer*
Thomas B. Hansen, Jørgen Kjems, and Christian K. Damgaard

5613  
*Antitumor Immunity: Easy as 1, 2, 3 with Monoclonal Bispecific Trifunctional Antibodies?*
John Maher and Antonella A. Adami

**PERSPECTIVE**

5618  
*The Relationship between Tumor Blood Flow, Angiogenesis, Tumor Hypoxia, and Aerobic Glycolysis*
Leif Østergaard, Anna Tietze, Thomas Nielsen, Kim Ryun Drasbek, Kim Mouridsen, Sune Nørhøj Jespersen, and Michael R. Horsman

**PRIORITY REPORT**

5625  
*A Novel Algorithm for Simplification of Complex Gene Classifiers in Cancer*

**MICROENVIRONMENT AND IMMUNOLOGY**

5633  
*Infiltrating Macrophages Promote Prostate Tumorigenesis via Modulating Androgen Receptor-Mediated CCL4–STAT3 Signaling*
Lei-Ya Fang, Kouji Izumi, Kuo-Pao Lai, Liang Liang, Lei Li, Hiroshi Miyamoto, Wen-Jye Lin, and Chawan-Sang Chang

**MOLECULAR AND CELLULAR PATHOBIOLOGY**

5682  
*Reg3β Deficiency Impairs Pancreatic Tumor Growth by Skewing Macrophage Polarization*
Meritxell Gironella, Carlos Calvo, Anna Fernández, Daniel Closa, Juan L. Iovanna, Joan Rosello-Catafau, and Emma Folch-Puy

---

**Interferon-c Suppresses cAMP to Disarm Human Regulatory T Cells**

**Précis:** These findings suggest a new application for IFN-α in cancer treatment by using it to inactivate T-regulatory cells in combination with vaccines as a means to degrade immune escape barriers that limit therapeutic responses.

**Adipocyte-Derived Fibroblasts Promote Tumor Progression and Contribute to the Desmoplastic Reaction in Breast Cancer**
Ludivine Bochet, Camille Lehuédé, Stéphanie Dauviller, Yuan Yuan Wang, Béatrice Dirat, Victor Laurent, Cédric Dray, Romain Guit, Isabelle Marikonneau-Parini, Sophie Le Gonidec, Bettina Couderc, Ghislaine Escourrou, Philippe Valet, and Catherine Muller

**Précis:** This article reports the discovery of a new stromal cell population in the breast tumor microenvironment that may offer unique new opportunities for targeted therapy in breast cancer.

**Tumor Microenvironmental Conversion of Natural Killer Cells into Myeloid-Derived Suppressor Cells**
Young-Jun Park, Boyeong Song, Yun-Sun Kim, Eun-Kyung Kim, Jung-Mi Lee, Ga-Eun Lee, Jae-Ouk Kim, Yeon-Jeong Kim, Woo-Sung Chang, and Chang-Yuil Kang

**Précis:** Striking findings in this study reveal new insights into how tumor cells hijack their local immune microenvironment to escape immune surveillance.
Oncogenic Herpesvirus HHV-8 Promotes Androgen-Independent Prostate Cancer Growth

Justin G. Mygatt, Adit Singhal, Gauthaman Sukumar, Clifton L. Dalgar, and Johnan A.R. Kaleeba

Précis: This provocative study prompts deeper investigations of the relationship between infection with human herpesvirus 8 (HHV-8) and risks of advanced prostate cancer, given findings that HHV-8 infection of primary prostate epithelial cells can drive several features of androgen-independent metastatic disease.

SOX10 Ablation Arrests Cell Cycle, Induces Senescence, and Suppresses Melanomagenesis

Précis: Definition of a core determining factor for cell-cycle control in melanoma suggests a rational new direction for targeted treatment or prevention of this disease.

Epimorphin Is a Novel Regulator of the Progesterone Receptor Isoform-A

Jamie L. Bascom, Derek C. Radisky, Eileen Koh, Jimmie E. Fata, Alvin Lo, Hidetoshi Mori, Neda Roosta, Yohei Hirai, and Mina J. Bissell

Précis: This study offers new insights into control of the expression of the progesterone receptor, a key driver and prognostic determinant in hormone-dependent breast cancers.

Rapid Induction of Lung Adenocarcinoma by Fibroblast Growth Factor 9 Signaling through FGF Receptor 3

Yongjun Yin, Tomoko Betsuyaku, Joel R. Garbow, Jinbai Miao, Ramaswamy Govindan, and David M. Ornitz

Précis: These findings highlight a mouse model of lung adenocarcinomas that form near the bronchioalveolar duct junction that may be useful to evaluate a growing number of experimental anticancer drugs that interfere with FGF signaling.

Akt SUMOylation Regulates Cell Proliferation and Tumorigenesis

Bong Li, Jie Wei, Cong Jiang, Dongmei Liu, Lu Deng, Kai Zhang, and Ping Wang

Précis: This important study reveals a fundamental feature for controlling the function of Akt, which is broadly activated in many human cancers where it contributes to survival, invasion, and therapeutic resistance.

c-Kit Is Suppressed in Human Colon Cancer Tissue and Contributes to L1-Mediated Metastasis

Nancy Gavert, Anna Shvab, Michal Sheffer, Amir Ben-Shmuel, Gal Haase, Ezster Bakos, Eytan Domany, and Avri Ben-Ze’ev

Précis: This report challenges the paradigm of c-Kit as an oncogene in demonstrating the importance of its suppression in colorectal cancer for its metastasis to liver, the most common site for dissemination of this disease.

Src Family Kinases as Novel Therapeutic Targets to Treat Breast Cancer Brain Metastases

Siyuan Zhang, Wen-Chien Huang, Lin Zhang, Chenyu Zhang, Frank J. Lowery, Zhaoxi Ding, Hua Guo, Hai Wang, Suyun Huang, Aysegul A. Sahin, Kenneth D. Aldape, Patricia S. Steeg, and Dihua Yu

Précis: Inhibitors of Src family tyrosine kinases that have been examined clinically might have excellent prospects for treatment of brain metastases of breast cancer, a deadly and untreatable step in disease progression occurring in many patients with advanced disease.

KIT Signaling Governs Differential Sensitivity of Mature and Primitive CML Progenitors to Tyrosine Kinase Inhibitors

Amie S. Corbin, Thomas O’Hare, Zhimin Gu, Ira L. Kraft, Anna M. Eiring, Jamshid S. Khorashad, Anthony D. Pomicter, Tian Y. Zhang, Christopher A. Eide, Paul W. Manley, Jorge E. Cortes, Brian J. Druker, and Michael W. Deininger

Précis: These findings may explain the limited effects that imatinib (Gleevec) has on CML progenitors, a long-standing question that appears to relate to KIT as a core element for understanding therapeutic responses to this iconic drug.

Targeting ERBB Receptors Shifts Their Partners and Triggers Persistent ERK Signaling through a Novel ERBB/EFNB1 Complex

Paola D. Vermeer, Paul L. Colbert, Bryant G. Wieking, Daniel W. Vermeer, and John H. Lee

Précis: This study provides a mechanistic explanation for why EGFR targeting drugs work poorly in head and neck carcinoma despite common involvement of EGFR in this cancer.

ABOUT THE COVER

The importance of natural killer (NK) cells for eradicating cancer cannot be overemphasized. It was found that the tumor environment impairs the development and function of NK cells and even diminishes the number of NK cells in patients with chronic myelogenous leukemia. Here, Park and colleagues show that a part of CD11b<sup>high</sup>CD27<sup>high</sup> NK cells obtained from tumor-bearing mice were converted into CD11b<sup>+</sup>Gr1<sup>+</sup> MDSC phenotype by GM-CSF, while the phenotype of NK cells was retained in the presence of IL-2. For details, see article by Park and colleagues on page 5669.
