**BREAKING ADVANCES**

471 Highlights from Recent Cancer Literature

**REVIEW**

473 Genome-Wide Epigenetic Regulation of miRNAs in Cancer
Constance Baer, Rainer Claus, and Christoph Plass

**PERSPECTIVE**

478 Overexpression of the Mitochondrial Folate and Glycine–Serine Pathway: A New Determinant of Methotrexate Selectivity in Tumors
Alexei Vazquez, Philip M. Tedeschi, and Joseph R. Bertino

**PRIORITY REPORTS**

483 Androgen Receptor Splice Variants Mediate Enzalutamide Resistance in Castration-Resistant Prostate Cancer Cell Lines
Yingming Li, Siu Chiu Chan, Lucas J. Brand, Tae Hyun Hwang, Kevin A.T. Silverstein, and Scott M. Dehm

**CLINICAL STUDIES**

508 Proinflammatory Homeobox Gene, ISX, Regulates Tumor Growth and Survival in Hepatocellular Carcinoma
Shih-Hsien Hsu, Li-Ting Wang, King-Teh Lee, Yao-Li Chen, Kwei-Yan Liu, Jau-Ling Suen, Chee-Yin Chai, and Shen-Nien Wang

**INTEGRATED SYSTEMS AND TECHNOLOGIES**

519 Systems Analysis of BCL2 Protein Family Interactions Establishes a Model to Predict Responses to Chemotherapy
Andreas U. Lindner, Caoimhín G. Concannon, Gerhardt J. Boukes, Mary D. Cannon, Fabien Llambi, Deborah Ryan, Karen Boland, Joan Kehoe, Deborah A. McNamara, Frank Murray, Elaine W. Kay, Suzanne Hector, Douglas R. Green, Heinrich J. Huber, and Jochen H.M. Prehn

**PRécis:** This study reports the development of a computational tool that can reliably predict colon cancer patient responses to chemotherapy and might also be useful for prognosis and patient stratification in the future.
Hyperpolarized \(^{13}\text{C}\)-Pyruvate Magnetic Resonance Reveals Rapid Lactate Export in Metastatic Renal Cell Carcinomas

Kayvan R. Kesari, Renuka Siriram, Bertram L. Koelsch, Mark Van Criekinge, David M. Wilson, John Kurhanewicz, and Zhen J. Wang

**Précis:** This preclinical study offers proof of concept for a noninvasive characterization of dynamic cellular metabolism and transporter expression in cancer, with the potential to determine tumor aggressiveness and treatment responses.

---

Microenvironment and Immunology

VEGFA-VEGFR Pathway Blockade Inhibits Tumor-Induced Regulatory T-cell Proliferation in Colorectal Cancer

Magali Terme, Simon Pernot, Elie Marcheteau, Federico Sandoval, Nadine Benhamouda, Orianne Colussi, Olivier Dubreuil, Antoine F. Carpentier, Eric Tartour, and Julien Taieb

**Précis:** A central pathway of tumor angiogenesis also has a pivotal role in driving immune escape, illustrating a tight integration of pathways driving malignant progression.

---

Cell Surface Receptor FPR2 Promotes Antitumor Host Defense by Limiting M2 Polarization of Macrophages

Ying Liu, Keqiang Chen, Chunyan Wang, Wanghua Gong, Teizo Yoshimura, Mingyong Liu, and Ji Ming Wang

**Précis:** A G protein-coupled receptor implicated in airway inflammation responses supports immune surveillance by restraining macrophages to the tumor cell-killing M1 phenotype.

---

CD40-Mediated Activation of Chronic Lymphocytic Leukemia Cells Promotes Their CD44-Dependent Adhesion to Hyaluronan and Restricts CCL21-Induced Motility

Tamarra Girbl, Elisabeth Hintenseer, Eva Melanie Grössinger, Daniela Asslaber, Karin Obersacher, Lukas Weiss, Cornelia Hauser-Kronberger, Daniel Neureiter, Hubert Kerschbaum, David Naor, Ronen Alon, Richard Greil, and Tanja Nicole Hartmann

**Précis:** The evolution of a specific adhesion event in the lymph node microenvironment where a particular leukemia arises is found to be a critical event in determining the outgrowth of these cancers.

---

CXCR2 Expression in Tumor Cells is a Poor Prognostic Factor and Promotes Invasion and Metastasis in Lung Adenocarcinoma

Pierre Saintigny, Ermina Massarelli, Steven Lin, Young-Ho Ahn, Yulon Chen, Sangeeta Goswami, Baruch Erez, Michael S. O'Reilly, Diane Liu, J. Jack Lee, Li Zhang, Yuan Ping, Carmen Behrens, Luisa M. Solis Soto, John V. Heymach, Edward S. Kim, Roy S. Herbst, Scott M. Lippman, Ignacio I. Wistuba, Waun Ki Hong, Jonathan M. Kurie, and Ja Seok Koo

**Précis:** A logical strategy to treat smoking-associated lung cancers is suggested by the definition of a proinflammatory signaling axis that cooperates with \(\text{Bx}\) mutations commonly found in this disease.

---

Lysyl Oxidase Plays a Critical Role in Endothelial Cell Stimulation to Drive Tumor Angiogenesis

Ann-Marie Baker, Demelza Bird, Jonathan C. Welti, Morgane Gourlaouen, Georgina Lang, Graeme I. Murray, Andrew R. Reynolds, Thomas R. Cox, and Janine T. Erler

**Précis:** Findings point to a new general mechanism for restricting VEGF-driven tumor angiogenesis, with important clinical and therapeutic implications in a wide variety of solid tumor types.

---

High-Avidity T Cells Are Preferentially Tolerized in the Tumor Microenvironment

**Précis:** T cells that are designed to be more potent for antitumor activity appear to lose their ability to control tumor growth when they persist in the tumor, offering new insights into why T-cell immunotherapies may fail.

---

Durable Adoptive Immunotherapy for Leukemia Produced by Manipulation of Multiple Regulatory Pathways of CD8\(^+\) T-Cell Tolerance

**Précis:** Simultaneous inhibition of the CTLA4, PD1, and LAG3 pathways of T-cell tolerance can relieve immune escape in leukemia and empower durable responses to adoptively transferred tumor-reactive T cells.
CD103 or LFA-1 Engagement at the Immune Synapse between Cytotoxic T Cells and Tumor Cells Promotes Maturation and Regulates T-cell Effector Functions
Katarzyna Franciszkiewicz, Audrey Le Floch, Marie Boutet, Isabelle Vergnon, Alain Schmitt, and Fathia Mami-Chouaib
Précis: This study shows how integrins that regulate the strength of the interaction between tumor cells and tumor-reactive T cells can alter their killing efficiency.

Tissue Damage–Associated "Danger Signals" Influence T-cell Responses That Promote the Progression of Preneoplasia to Cancer
Ying He, Jikun Zha, Yamin Wang, Wenhua Liu, Xuanming Yang, and Ping Yu
Précis: Release of the tissue damage-associated molecule HMGB1 by budding prostate tumors exerts an early impact on immune escape and malignant progression.

Homing of Human B Cells to Lymphoid Organs and B-Cell Lymphoma Engraftment Are Controlled by Cell Adhesion Molecule JAM-C
Carmen Doñate, Christiane Ody, Thomas McKee, Sylvie Ruault-Jungblut, Nicolas Fischer, Patricia Ropraz, Beat A. Imhof, and Thomas Matthes
Précis: Findings suggest an important new therapeutic target that may have general applications in the treatment of a variety of types of human lymphoma.

Expression of CD137 on Hodgkin and Reed–Sternberg Cells Inhibits T-cell Activation by Eliminating CD137 Ligand Expression
Weng Tong Ho, Wan Lu Pang, Siew Meng Chong, Antonio Castella, Suhaib Al-Salam, Teng Ee Tan, Mei Chung Moh, Liang Kai Koh, Shu Un Gan, Cheong Kin Cheng, and Herbert Schwarz
Précis: Findings show how Hodgkin lymphomas escape immune control, with implications for leveraging more effective immunotherapy to treat this disease.

Twist1 Induces CCL2 and Recruits Macrophages to Promote Angiogenesis
Janine M. Low-Marchelli, Veronica C. Ardi, Edward A. Vizcarra, Nico van Rooijen, James P. Quigley, and Jing Yang
Précis: Findings show how a gene implicated in EMT and metastasis also promotes angiogenesis by recruiting macrophages into the tumor microenvironment.

Myeloid-Derived Suppressor Cells Function as Novel Osteoclast Progenitors Enhancing Bone Loss in Breast Cancer
Anandi Sawant, Jessy Deshane, Joel Jules, Carnella M. Lee, Britney A. Harris, Xu Feng, and Selvarangan Ponnazhagan
Précis: Seminal findings define a novel crucial role for myeloid-derived suppressor cells in driving bone metastasis, with implications for how to block this deadly aspect of many cancers including breast cancer.

RANKL Expression, Function, and Therapeutic Targeting in Multiple Myeloma and Chronic Lymphocytic Leukemia
Benjamin Joachim Schmiedel, Carolin Andrea Scheible, Tina Nuebling, Hans-Georg Kopp, Stefan Wirths, Miyuki Azuma, Pascal Schneider, Gundram Jung, Ludger Grosse-Hovest, and Helmut Rainer Sally
Précis: Findings establish an immunotherapeutic means to neutralize the detrimental function of RANKL while potently stimulating the antitumor properties of NK cells against malignant hematopoietic cells.

MYC Acts via the PTEN Tumor Suppressor to Elicit Autoregulation and Genome-Wide Gene Repression by Activation of the Ezh2 Methyltransferase
Mandeep Kaur and Michael D. Cole
Précis: Results reveal a new model for MYC-mediated gene repression, which is linked to the PTEN tumor suppressor, possibly explaining the long-standing question of why MYC autoregulation is lost in cancers.

Nitric Oxide–Dependent Downregulation of BRCA1 Expression Promotes Genetic Instability
Vasily A. Yakovlev
Précis: This study offers an incisive new perspective on the complex role of reactive nitrogen species in cancer, revealing that they promote genetic instability not directly but indirectly by shifting DNA repair from high-fidelity to error-prone mechanisms.
Identification of an Aurora Kinase Inhibitor Specific for the Aurora B Isoform
Hua Xie, Mee-Hyun Lee, Feng Zhu, Kanamata Reddy, Cong Peng, Yan Li, Do Young Lim, Dong Joon Kim, Xiang Li, Soouk Kang, Haitao Li, Weiya Ma, Ronald A. Lubet, Jian Ding, Ann M. Bode, and Zigang Dong

Precise: Although a variety of Aurora kinase inhibitors have been described, with some now in clinical trials, this is the first study to identify an inhibitor specific for the Aurora B isoform that appears to exert special features in cancer.

SMAD2, SMAD3 and SMAD4 Mutations in Colorectal Cancer
Nicholas I. Fleming, Robert N. Jorissen, Dmitri Mouradov, Michael Christie, Anuratha Sakthianandeswaren, Michelle Palmieri, Fiona Day, Shan Li, Cary Tsui, Lara Lipton, Jayesh Desai, Ian T. Jones, Stephen McLaughlin, Robyn L. Ward, Nicholas J. Hawksins, Andrew R. Ruszkiewicz, James Moore, Hong-Jian Zhu, John M. Mariadason, Antony W. Burgess, Dana Busam, Qi Zhao, Robert L. Strausberg, Peter Gibbs, and Oliver M. Sieber

Precise: Through a combined analysis of SMAD gene mutations in colorectal cancer, this article shows a common pathogenic mechanism and a new way to understand how SMAD mutations compromise the TGF-β pathway.

Epigenetic Regulation by Z-DNA Silencer Function Controls Cancer-Associated ADAM-12 Expression in Breast Cancer: Cross-talk between MeCP2 and NF1 Transcription Factor Family

Precise: Findings highlight a novel epigenetic regulatory process involving Z-DNA and several epigenetic factors that contribute to overexpression of breast cancer-associated genes.

Bcl3 Selectively Promotes Metastasis of ERBB2-Driven Mammary Tumors
Alison Wakefield, Jitka Soukupova, Amelie Montagne, Jill Ranger, Rhiannon French, William J. Muller, and Richard W. E. Clarkson

Precise: The study reveals that the oncogene Bcl3 is critical for breast cancer metastasis by controlling tumor cell mobility.

miR-186 Downregulation Correlates with Poor Survival in Lung Adenocarcinoma Where It Interferes with Cell-Cycle Regulation
Junchao Cai, Jueheng Wu, Huizhong Zhang, Lishan Fang, Yongbo Huang, Yi Yang, Xun Zhu, Rong Li, and Mengfeng Li

Precise: Results define a tumor suppressor function for a microRNA that blocks cell-cycle progression by directly targeting the pivotal cell-cycle regulators cyclin D1, CDK2, and CDK6.

PREVENTION AND EPIDEMIOLOGY

Common Single-Nucleotide Polymorphisms in the Estrogen Receptor β Promoter Are Associated with Colorectal Cancer Survival in Postmenopausal Women

Precise: Estrogen receptor β is suspected to play a role in colorectal cancer progression by modifying pathways that influence malignant invasion and metastasis.

THERAPEUTICS, TARGETS, AND CHEMICAL BIOLOGY

Combination Therapy Targeting the Chk1 and Weel Kinases Shows Therapeutic Efficacy in Neuroblastoma

Precise: Findings offer preclinical proof of concept that inhibitors of a key mitotic regulator can be highly efficacious for treating neuroblastoma, one of the most aggressive pediatric tumors.

DNA Damage–Specific Control of Cell Death by Cryptochrome in p53-Mutant Ras–Transformed Cells
Jin Hyup Lee, Shobhan Gaddameedhi, Nuri Ozturk, Rui Ye, and Aziz Sancar

Precise: Findings show how different regulators of the circadian clock affect distinct pathways of intrinsic apoptosis in malignant cells.
Histone Deacetylase Inhibitor AR-42 Differentially Affects Cell-cycle Transit in Meningeal and Meningioma Cells, Potently Inhibiting V62-Deficient Meningioma Growth
Sarah S. Burns, Elena M. Akhmametyeva, Janet L. Oblinger, Matthew L. Bush, Jie Huang, Volker Senner, Ching-Shih Chen, Abraham Jacob, D. Bradley Welling, and Long-Sheng Chang
Précis: Preclinical investigations establish the potential utility of a pan-HDAC inhibitor in treatment of meningioma, a type of brain tumor.

De Novo Design of a Tumor-Penetrating Peptide
Luca Alberici, Lise Roth, Kazuki N. Sugahara, Lilach Agemy, Venkata R. Kotamraju, Tambet Teesalu, Claudio Bordignon, Catia Traversari, Gian-Paolo Rizzardi, and Eriki Ruoslahti
Précis: Nanotherapies incorporating effective tumor-penetrating peptides may improve drug delivery to tumor vessels and into the extravascular tumor tissue.

Polo-like Kinase 1: A Potential Therapeutic Option in Combination with Conventional Chemotherapy for the Management of Patients with Triple-Negative Breast Cancer
Virginie Maire, Fariba Nemati, Marion Richardson, Anne Vincent-Salomon, Bruno Tesson, Guillaume Rigail, Éléonore Gravier, Bérengère Marty-Prouvost, Leanne De Koning, Guillaume Lang, David Gentien, Aurélie Dumont, Emmanuel Barillot, Elisabetta Marangoni, Didier Decaudin, Guillaume Lang, David Gentien, and Thierry Dubois
Précis: This study suggests a promising therapeutic target for chemotherapy combination treatment of patients with triple-negative breast cancers, which tend to be more aggressive and less treatable than other types of breast cancer.

Dual Targeting of EGFR and HER3 with MEHD7945A Overcomes Acquired Resistance to EGFR Inhibitors and Radiation
Shyhmin Huang, Chunrong Li, Eric A. Armstrong, Chimera R. Peet, Jarob Saker, Lukas C. Amler, Mark X. Sliwkowski, and Paul M. Harari
Précis: By anticipating a common resistance mechanism to EGFR inhibitors, a new agent that can overcome HER3 signaling as well as target the EGFR has great potential to address a current therapeutic barrier in the field.

Resistance to Irreversible EGF Receptor Tyrosine Kinase Inhibitors through a Multistep Mechanism Involving the IGFR1 Pathway
Alexis B. Cortot, Claire E. Repelin, Takeshi Shimamura, Marzia Capelletti, Kreshnik Zejnulahu, Dalia Ercan, James G. Christensen, Kwok-Kin Wong, Nathanael S. Gray, and Pasi A. Janne
Précis: Prophylactic blockade of known mechanisms of drug resistance before they can emerge will be critical for generating more effective strategies of targeted combination therapy.

MDA-9/Syntenin and IGFBP-2 Promote Angiogenesis in Human Melanoma
Précis: This work highlights novel targets to reverse the production of new blood vessels by tumors.

Real-time In Vivo Molecular Detection of Primary Tumors and Metastases with Ratiometric Activatable Cell-Penetrating Peptides
Elamprakash N. Savariar, Csilla N. Felsen, Nadia Nashi, Tao Jiang, Lesley G. Ellies, Paul Steinbach, Roger Y. Tsien, and Quyen T. Nguyen
Précis: Improved methods to detect tumors and metastases in preclinical models are needed for longitudinal animal studies and are vital to move the field beyond increasingly irrelevant cell culture models of cancer.

Specific Elimination of CD133+ Tumor Cells with Targeted Oncolytic Measles Virus
Précis: Preclinical studies show how to improve the efficacy of oncolytic viruses by targeting them to CD133+ stem cells in multiple orthotopic and xenograft mouse models of cancer.
Targeting Folate Receptors to Treat Invasive Urinary Bladder Cancer

Hypomethylating Therapy in an Aggressive Stroma-Rich Model of Pancreatic Carcinoma

Therapeutic Effects of Deleting Cancer-Associated Fibroblasts in Cholangiocarcinoma

RNA Trafficking by Acute Myelogenous Leukemia Exosomes

Convergence of the ZMIZ1 and NOTCH1 Pathways at C-MYC in Acute T Lymphoblastic Leukemias

Definition of Molecular Determinants of Prostate Cancer Cell Bone Extravasation

Chromosome Instability Modulated by BMI1–AURKA Signaling Drives Progression in Head and Neck Cancer

DKK2 Mediates Osteolysis, Invasiveness, and Metastatic Spread in Ewing Sarcoma

Glutathione-Deficient Mice have Increased Sensitivity to Transplacental Benzo[a]pyrene-Induced Premature Ovarian Failure and Ovarian Tumorigenesis
**Novel Oncogene–Induced Metastatic Prostate Cancer Cell Lines Define Human Prostate Cancer Progression Signatures**

Xiaoming Ju, Adam Ertel, Mathew C. Casimiro, Zuoren Yu, Hui Meng, Peter A. McCue, Rhonda Walters, Paolo Fortina, Michael P. Lisanti, and Richard G. Pestell

**Précis:** Murine prostate cancer cell lines that can metastasize in immunocompetent hosts accurately reflect the genomic and transcriptomic changes that occur in human prostate cancer and provide an improved set of tools for the field to test new therapies.

**LETTERS TO THE EDITOR**

**Fibroblast-Derived CCL2 Induces Cancer Stem Cells—Letter**

Gurcan Gunaydin, Yusuf Dolen, and S. Altug Kesikli

**Fibroblast-Derived CCL2 Induces Cancer Stem Cells—Response**

Akihiro Tsuyada and Shizhen Emily Wang

**Retraction:** Initial Analyses of Colon Cancer–Specific Antigen (CCSA)-3 and CCSA-4 as Colorectal Cancer–Associated Serum Markers

A Journal of the American Association for Cancer Research www.aacrjournals.org
ABOUT THE COVER

Twist1 is a key inducer of epithelial-mesenchymal transition during tumor metastasis and is upregulated in aggressive human cancers. A new role for Twist1 in tumor progression was uncovered, showing that Twist1 is capable of stimulating angiogenesis via CCL2 production and subsequent recruitment of macrophages from the tumor stroma. Using a Matrigel plug assay, the images show that mouse mammary tumor cells endogenously expressing high levels of Twist1 stimulated a strong angiogenic response, seen as red blood vessels in the isolated plugs. When Twist1 expression was suppressed in these cells, the angiogenic response was diminished. For details, see the article by Low-Marchelli and colleagues on page 662.
