MEETING REPORT

The Hippo Tumor Suppressor Network: From Organ Size Control to Stem Cells and Cancer
Georg Halder and Fernando D. Camargo

PRIORITY REPORT

Erythropoietin Activates Cell Survival Pathways in Breast Cancer Stem–like Cells to Protect Them from Chemotherapy
Matilde Todaro, Alice Turdo, Monica Bartucci, Flora Iovino, Rosanna Dattilo, Marco Biffoni, Giorgio Stassi, Giulia Federici, Ruggero De Maria, and Ann Zeuner

MOLECULAR AND CELLULAR PATHOBIOLOGY

miR-153 Supports Colorectal Cancer Progression via Pleiotropic Effects That Enhance Invasion and Chemotherapeutic Resistance
Lei Zhang, Karen Pickard, Veronika Jenei, Marc D. Bullock, Amanda Bruce, Richard Mitter, Gavin Kelly, Christos Paraskeva, John Stelford, John Primrose, Gareth J. Thomas, Graham Packham, and Alex H. Mirnezami

INTEGRATED SYSTEMS AND TECHNOLOGIES

A Transcriptional and Metabolic Signature of Primary Aneuploidy Is Present in Chromosomally Unstable Cancer Cells and Informs Clinical Prognosis
Jason M. Sheltzer

Precis: Chromosomal instability in cancer cells is associated with a transcriptional stress response that has prognostic significance in various types of human malignancy.
**Mutationally Activated PIK3CA**<sup>H1047R</sup> **Cooperates with BRAF**<sup>V600E</sup> **to Promote Lung Cancer Progression**

Christy L. Trejo, Shon Green, Victoria Marsh, Eric A. Collisson, Gioia Iezza, Wayne A. Phillips, and Martin McMahon

*Précis:* These findings deepen the in vivo evidence that MAPK and PI3K signaling cooperates in mediating the development and progression of KRAS-mutated lung cancer, suggesting combination therapies to treat this disease.

---

**Antitumor Efficacy of a Monoclonal Antibody That Inhibits the Activity of Cancer-Associated Carbonic Anhydrase XII**

Gabor Gondi, Josef Mysliwietz, Alzbeta Hulikova, Jian Ping Jen, Pawel Swietach, Elisabeth Kremmer, and Reinhard Zeidler

*Précis:* This study offers a preclinical proof-of-concept for immune targeting a cell surface carbonic anhydrase that is widely expressed in human cancer as a general therapeutic strategy.

---

**Photodynamic Therapy of Murine Mastocytoma Induces Specific Immune Responses against the Cancer/Testis Antigen P1A**

Pawel Mroz, Fatma Vatansever, Angelika Muchowicz, and Michael R. Hamblin

*Précis:* Effective photodynamic therapy used to treat certain cancers may act as antigen-specific immunotherapy.

---

**Bispecific Antibody to ErbB2 Overcomes Trastuzumab Resistance through Comprehensive Blockade of ErbB2 Heterodimerization**

Bohua Li, Yanchun Meng, Lei Zheng, Xumin Zhang, Qing Tong, Wenlong Tan, Shi Hu, Hai Li, Yang Chen, Jinqing Song, Ge Zhang, Lei Zhao, Dapeng Zhang, Sheng Hou, Weizhu Qian, and Yajun Guo

*Précis:* Using a bispecific antibody to block ErbB2/HER2 heterodimerization on the surface of breast cancer cells may provide a strategy to overcome resistance to Herceptin that remains a major clinical challenge in breast cancer patients.

---

**A Small-Molecule Blocking Ribonucleotide Reductase Holoenzyme Formation Inhibits Cancer Cell Growth and Overcomes Drug Resistance**

*Précis:* These findings address deficiencies in existing drugs that block ribonucleotide reductase, offering preclinical validation of a promising new class of inhibitors against this valid target that could find broad use to treat many human cancers.

---

**Correction**

Correction: Breast Tumor Kinase (Brk/PTK6) Is a Mediator of Hypoxia-Associated Breast Cancer Progression

**MYC Phosphorylation at Novel Regulatory Regions Suppresses Transforming Activity**

Amanda R. Wasylishen, Michelle Chan-Seng-Yue, Christina Rros, Dharmendra Dingar, William B. Tu, Manpreet Kalkat, Pak-Kei Chan, Peter J. Mullen, Ling Huang, Natalie Meyer, Brian Raught, Paul C. Boutros, and Linda Z. Penn

*Précis:* MYC phosphorylation mutants with super-transforming activity that were identified in this study point the way toward new therapeutic targets to attack MYC by a backdoor approach.

---

**TIG1 Promotes the Development and Progression of Inflammatory Breast Cancer through Activation of Axl Kinase**

Xiaoping Wang, Hitomi Saso, Takayuki Iwamoto, Weiya Xia, Yun Gong, Lajos Pusztai, Wendy A. Woodward, James M. Reuben, Steven L. Warner, David J. Bearss, Gabriel N. Hortobagyi, Mien-Chie Hung, and Naoto T. Ueno

*Précis:* These findings provide key new insights into the molecular pathobiology of the most aggressive form of breast cancer, rationalizing the Axl receptor signaling pathway as a therapeutic target for treatment of this lethal disease.

---

**Nitric Oxide Production Upregulates Wnt/β-Catenin Signaling by Inhibiting Dickkopf-1**

Qiang Du, Xinglu Zhang, Quan Liu, Xianghong Zhang, Christian E. Bartels, and David A. Geller

*Précis:* In addressing the complex role of nitric oxide in cancer, this study furthers evidence of an oncogenic contribution that is mediated by a mechanism that stimulates Wnt/β-catenin signaling, a central pathway for carcinogenesis.
ABOUT THE COVER

miR-153 leads to increased invasiveness in colorectal cancer. Using mouse tumor xenografts, it was found that colorectal tumors with inhibition of miR-153 show a clean edge of tumor spheroid and fewer invasive fronts into the surrounding stroma (magnification, ×400) in contrast to controls with a more locally invasive tumor phenotype. For details, see article by Zhang and colleagues on page 6435.
