BREAKING ADVANCES

2023 | Highlights from Recent Cancer Literature

REVIEWS

2025 | Genetic Susceptibility to Triple-Negative Breast Cancer
Kristen N. Stevens, Celine M. Vachon, and Fergus J. Couch

2031 | The Multifaceted Role of the Microenvironment in Liver Metastasis: Biology and Clinical Implications

PRIORITY REPORTS

2044 | CUL3 and NRF2 Mutations Confer an NRF2 Activation Phenotype in a Sporadic Form of Papillary Renal Cell Carcinoma
Aikseng Ooi, Karl Dykema, Asif Ansari, David Petillo, John Snider, Richard Kahkoski, John Anema, David Craig, John Carpten, Bin-Tean Teh, and Kyle A. Furge

2052 | Differential Contributions of STAT5A and STAT5B to Stress Protection and Tyrosine Kinase Inhibitor Resistance of Chronic Myeloid Leukemia Stem/Progenitor Cells

CLINICAL STUDIES

2059 | Plastin3 Is a Novel Marker for Circulating Tumor Cells Undergoing the Epithelial–Mesenchymal Transition and Is Associated with Colorectal Cancer Prognosis

2064 | Targeting uPAR with Antagonistic Recombinant Human Antibodies in Aggressive Breast Cancer
Aaron M. LeBeau, SaiDuriseti, Stephanie T. Murphy, Francois Pepin, Byron Hann, Joe W. Gray, Henry F. VanBrocklin, and Charles S. Craik

2082 | Enhanced Sonographic Imaging to Diagnose Lymph Node Metastasis: Importance of Blood Vessel Volume and Density
Li Li, Shiro Mori, Mizuho Kodama, Maya Sakamoto, Shoki Takahashi, and Tetsuya Kodama

| A Multifunctional Chimeric Chaperone Serves as a Novel Immune Modulator Inducing Therapeutic Antitumor Immunity  
Xiaofei Yu, Chunqing Guo, Huanfa Yi, Jie Qian,  
Paul B. Fisher, John R. Subjeck, and  
Xiang-Yang Wang  
Précis: A novel strategy targets the immunosuppressive tumor environment using a chimeric immune chaperone, leading to systemic T cell-mediated tumor inhibition. |
| Distinct Effects of Ligand-Induced PDGFRα and PDGFRβ Signaling in the Human Rhabdomyosarcoma Tumor Cell and Stroma Cell Compartments  
Monika Ehman, Edorado Missaglia,  
Erika Folestad, Joanna Selle, Carina Strell,  
Khin Thway, Bertha Brodin, Kristian Pietras,  
Janet Shipley, Arne Ostman, and Ulf Eriksson  
Précis: Distinct patterns of ligand-dependent activity for the two major forms of PDGF signaling were found in either the stromal or tumor cell compartments of aggressive muscle cell tumors, both of clinical relevance. |
| Aire Deficiency Promotes TRP-1–Specific Immune Rejection of Melanoma  
Meng-Lei Zhu, Anil Nagavalli, and  
Maureen A. Su  
Précis: Findings define a pathway of autoimmune control in thymic epithelial cells that can modulate immune responses against melanoma in otherwise healthy individuals, with implications for enhancing immune responses to this deadly skin cancer. |
| Cooperative Activation of Tissue-Specific Genes by pRB and E2F1  
Stephen Flowers, Fuhua Xu, and  
Elizabeth Moran  
Précis: This study offers novel mechanistic insights into why Rb deficiency is so closely associated with the development of osteosarcoma. |
| Autoimmune Gastritis Mediated by CD4+ T Cells Promotes the Development of Gastric Cancer  
Thanh-Long M. Nguyen, Shradha S. Khurana,  
Clifford J. Bellone, Benjamin J. Capoccia,  
John E. Sagartz, Russell A. Kesman Jr,  
Jason C. Mills, and Richard J. DiPaolo  
Précis: Findings provide the first direct evidence that autoimmune gastritis supports the development of stomach cancer and also offer a useful new model to deepen knowledge of how inflammation drives malignancy in this setting. |
| Loss of TGF-β Adaptor β2SP Activates Notch Signaling and SOX9 Expression in Esophageal Adenocarcinoma  
Shumer Song, Dipen M. Maru, Jaffer A. Ajani,  
Chia-Hsin Chan, Soichiro Honjo, Hui-Kuan Lin,  
Arlene Correa, Wayne L. Hofstetter,  
Marta Davila, John Stroehlein, and Lopa Mishra  
Précis: Intriguing findings suggest one mechanism through which TGF-β signaling switches from tumor suppressing to tumor promoting during malignant progression. |
| Anti-CD20 Antibody Promotes Cancer Escape via Enrichment of Tumor-Evoked Regulatory B Cells Expressing Low Levels of CD20 and CD137L  
Monica Bodogai, Catalina Lee Chang,  
Katarzyna Wejksza, Jinping Lai, Maria Merino,  
Robert P. Wertz, Ronald E. Gress,  
Andrew C. Chan, Charles Hesdorffer, and  
Arya Biragyn  
Précis: Findings speak to the importance of tumor-evoked B-regulatory cells in driving immune escape and cancer progression, also suggesting a basis for understanding the procarcinogenic risks of B cell-depleting therapies like rituximab. |
| FOXP3 Regulates Sensitivity of Cancer Cells to Irradiation by Transcriptional Repression of BRCA1  
Weiquan Li, Hiroto Katoh, Lizhong Wang,  
Xiaochun Yu, Zhanwen Du, Xiaoli Yan,  
Pan Zheng, and Yang Liu  
Précis: A transcription factor implicated in immune tolerance and mutated in prostate and breast cancer cells is reported here to regulate DNA repair through the BRCA1 pathway, possibly directly linking DNA repair processes to immune escape in cancer. |
| Sunlight UV-Induced Skin Cancer Relies upon Activation of the p38α Signaling Pathway  
Kangdong Liu, Donghoon Yu, Yong Yo Choe,  
Ann M. Bode, Weiya Ma, Ke Yao, Shengqing Li,  
Jixia Li, G. Tim Bowden, Ziming Dong, and  
Zigang Dong  
Précis: Solar UV, which includes UVA and UVB wavelengths contributing to skin cancers, must activate a MAPK-related stress pathway, with implications for prevention and treatment of these common malignancies. |
FOXO3a Is a Major Target of Inactivation by PI3K/AKT Signaling in Aggressive Neuroblastoma
Evan E. Santo, Peter Stroeken, Peter V. Sluis, Jan Koster, Rogier Versteeg, and Ellen M. Westerhout

Précis: This study highlights a pivotal role for FOXO3a in understanding the pathobiology of neuroblastoma and suggests its utility as a biomarker for prognosis and therapeutic responses to PI3K/AKT inhibitors being developed clinically.

Proteomic Analysis of Ubiquitin Ligase KEAP1 Reveals Associated Proteins That Inhibit NRF2 Ubiquitination
Bridgid E. Hast, Dennis Goldfarb, Kathleen M. Mulvaney, Michael A. Hast, Priscilla F. Siesser, Feng Yan, D. Neil Hayes, and Michael B. Major

Précis: Findings offer mechanistic insight into the broad cytoprotection afforded cancer cells that activate the NRF2 transcription factor, as a route to escape killing by cytotoxic therapeutic treatments.

PREVENTION AND EPIDEMIOLOGY

2211 Common Genetic Polymorphisms Modify the Effect of Smoking on Absolute Risk of Bladder Cancer

Précis: Smoking prevention strategies may have more public health impact on subsets of the population that are at elevated genetic risk.

THERAPEUTICS, TARGETS, AND CHEMICAL BIOLOGY

Erlotinib Prolongs Survival in Pancreatic Cancer by Blocking Gemcitabine-Induced MAPK Signals
Koji Miyabayashi, Hideaki Ijichi, Dai Mohri, Motohisa Tada, Keiske Yamamoto, Yoshinari Asao, Tsuneo Ikemura, Keisuke Tateishi, Yousuke Nakai, Hiroyuki Isayama, Yasuyuki Morishita, Masao Onata, Harold L. Moses, and Kazuhiko Koike

Précis: Findings address clinical questions concerning why the EGFR inhibitor erlotinib benefits KRAS-mutant pancreatic cancer patients when combined with gemcitabine.

mTOR Inhibitors Block Kaposi Sarcoma Growth by Inhibiting Essential Autocrine Growth Factors and Tumor Angiogenesis

Précis: Findings offer a new disease model and preclinical proof-of-concept for the use of mTOR inhibitors to treat a major HIV-associated cancer as well as related tumors that are also derived from endothelial cells.

Targeting the Deregulated Spliceosome Core Machinery in Cancer Cells Triggers mTOR Blockade and Autophagy
Virginie Quidiville, Samar Alsaifadi, Aicha Goubar, Frédéric Commo, Véronique Scott, Catherine Pioche-Durieu, Isabelle Girault, Sonia Baconnais, Eric Le Cam, Vladimir Lazar, Suzette Delalorge, Mahasti Saghatchian, Patricia Pautier, Philippe Morice, Philippe Dessen, Stéphan Vagner, and Fabrice André

Précis: Certain Sm components of snRNPs involved in RNA splicing may constitute appealing therapeutic targets for a generalized strategy to treat cancer.

HDAC6 Inhibition Restores Ciliary Expression and Decreases Tumor Growth
Sergio A. Gradilone, Brynn N. Radtke, Pamela S. Bogert, Bing Q. Huang, Gabriella B. Gajdos, and Nicholas F. LaRusso

Précis: HDAC6 is essential in epithelial cells for formation of the primary cilia, organelles that are essential and sufficient to organize normal cell structure, growth, and function but that are disrupted during neoplastic transformation.

Sirtuin-1 Regulates Acinar-to-Ductal Metaplasia and Supports Cancer Cell Viability in Pancreatic Cancer

Précis: This study addresses a key factor in the disruption of acinar cell differentiation in the pancreas, a situation that predisposes to the development of pancreatic cancer.

ST6Gal-I Protein Expression Is Upregulated in Human Epithelial Tumors and Correlates with Stem Cell Markers in Normal Tissues and Colon Cancer Cell Lines
Amanda F. Swindall, Angelina I. Londoño-Joshi, Matthew J. Schultz, Naomi Fineberg, Donald J. Buchsbaum, and Susan L. Bellis

Précis: Results identify a sialyltransferase that may serve as a regulator of the stem-like phenotype in both normal and cancer cell populations.

ABOUT THE COVER
Antibodies against epithelial cell adhesion molecule (EpCAM) and cytokeratins are commonly used to capture and detect circulating tumor cells (CTC). However, these approaches are potentially hampered by the fact that migratory cancer cells may undergo a process called the epithelial-mesenchymal transition that is characterized by downregulation of epithelial markers, including cytokeratins and EpCAM. Images are of EpCAM(−)/CD45(−) circulating tumor cells immunostained with antibodies against cytokeratin (red, top), PLS3 (green, middle), and vimentin (orange, bottom). All sections were counterstained with DAPI (blue). PLS3 was expressed on EpCAM(−) CTCs that displayed reduced cytokeratin staining, accompanied by strong staining for vimentin. For details, see article by Yokobori and colleagues on page 2059.
