### BREAKING ADVANCES

2023

- Highlights from Recent Cancer Literature

### REVIEWS

2025

- Genetic Susceptibility to Triple-Negative Breast Cancer
  Kristen N. Stevens, Celine M. Vachon, and Fergus J. Couch

2031

- The Multifaceted Role of the Microenvironment in Liver Metastasis: Biology and Clinical Implications

### PRIORITY REPORTS

2044

- CUL3 and NRF2 Mutations Confer an NRF2 Activation Phenotype in a Sporadic Form of Papillary Renal Cell Carcinoma
  Aikseng Ooi, Karl Dykema, Asif Ansari, David Petillo, John Snider, Richard Kahnoski, John Anema, David Craig, John Carpten, Bin-Tean Teh, and Kyle A. Furge

2052

- Differential Contributions of STAT5A and STAT5B to Stress Protection and Tyrosine Kinase Inhibitor Resistance of Chronic Myeloid Leukemia Stem/ Progenitor Cells

### CLINICAL STUDIES

2059

- Plastin3 Is a Novel Marker for Circulating Tumor Cells Undergoing the Epithelial–Mesenchymal Transition and Is Associated with Colorectal Cancer Prognosis

### INTEGRATED SYSTEMS AND TECHNOLOGIES

2070

- Targeting uPAR with Antagonistic Recombinant Human Antibodies in Aggressive Breast Cancer
  Aaron M. LeBeau, Sai Duriseti, Stephanie T. Murphy, Francois Pepin, Byron Hann, Joe W. Gray, Henry F. VanBrocklin, and Charles S. Craik

2082

- Enhanced Sonographic Imaging to Diagnose Lymph Node Metastasis: Importance of Blood Vessel Volume and Density
  Li Li, Shiro Mori, Mizuho Kodama, Maya Sakamoto, Shoki Takahashi, and Tetsuya Kodama

Précis: This study establishes a superior blood-based prognostic marker to gauge the risk of relapse in metastatic colorectal cancer, surpassing existing clinicopathologic factors.

Précis: Findings provide preclinical proof-of-concept that antagonistic human uPAR antibodies can provide useful diagnostic and therapeutic properties to improve treatment of aggressive triple-negative breast cancers.

Précis: Ultrasoundography methods to detect early changes in blood vessel volume and density in lymph nodes containing metastatic cells may offer earlier and more accurate criteria for diagnosis of lymph node metastasis, a critical staging and prognostic marker in many cancers.
A Multifunctional Chimeric Chaperone Serves as a Novel Immune Modulator Inducing Therapeutic Antitumor Immunity

Xiaofei Yu, Chunqing Guo, Huanfa Yi, Jie Qian, Paul B. Fisher, John R. Subjeck, and Xiang-Yang Wang

Precis: A novel strategy targets the immunosuppressive tumor environment using a chimeric immune chaperone, leading to systemic T cell-mediated tumor inhibition.

Aire Deficiency Promotes TRP-1–Specific Immune Rejection of Melanoma

Meng-Lei Zhu, Anil Nagavalli, and Maureen A. Su

Precis: Findings define a pathway of autoimmune control in thymic epithelial cells that can modulate immune responses against melanoma in otherwise healthy individuals, with implications for enhancing immune responses to this deadly skin cancer.

Autoimmune Gastritis Mediated by CD4+ T Cells Promotes the Development of Gastric Cancer

Precis: Findings provide the first direct evidence that autoimmune gastritis supports the development of stomach cancer and also offer a useful new model to deepen knowledge of how inflammation drives malignancy in this setting.

Anti-CD20 Antibody Promotes Cancer Escape via Enrichment of Tumor-Evoked Regulatory B Cells Expressing Low Levels of CD20 and CD137L

Monika Ehnman, Edoardo Missiaglia, Erika Folestad, Joanna Selle, Carina Strell, Khin Thway, Bertha Brodin, Kristian Pietras, Janet Shipley, Arne Ostman, and Ulf Eriksson

Precis: Distinct patterns of ligand-dependent activity for the two major forms of PDGF signaling were found in either the stromal or tumor cell compartments of aggressive muscle cell tumors, both of clinical relevance.

Distinct Effects of Ligand-Induced PDGFRα and PDGFRβ Signaling in the Human Rhabdomyosarcoma Tumor Cell and Stroma Cell Compartments

Monika Ehnman, Edoardo Missiaglia, Erika Folestad, Joanna Selle, Carina Strell, Khin Thway, Bertha Brodin, Kristian Pietras, Janet Shipley, Arne Ostman, and Ulf Eriksson

Precis: This study offers novel mechanistic insights into why Rb deficiency is so closely associated with the development of osteosarcoma.

Cooperative Activation of Tissue-Specific Genes by pRB and E2F1

Stephen Flowers, Fuhua Xu, and Elizabeth Moran

Precis: Findings speak to the importance of tumor-evoked B-cell regulatory cells in driving immune escape and cancer progression, also suggesting a basis for understanding the oncogenic risks of B cell-depleting therapies like rituximab.
FOXO3a Is a Major Target of Inactivation by PI3K/AKT Signaling in Aggressive Neuroblastoma

Evan E. Santo, Peter Stroeken, Peter V. Sluis, Jan Koster, Rogier Versteeg, and Ellen M. Westerhout

Precis: This study highlights a pivotal role for FOXO3a in understanding the pathobiology of neuroblastoma and suggests its utility as a biomarker for prognosis and therapeutic responses to PI3K/AKT inhibitors being developed clinically.

Proteomic Analysis of Ubiquitin Ligase KEAP1 Reveals Associated Proteins That Inhibit NRF2 Ubiquitination

Bridgid E. Hast, Dennis Goldfarb, Kathleen M. Mulvaney, Michael A. Hast, Priscilla F. Siesser, Feng Yan, D. Neil Hayes, and Michael B. Major

Precis: Findings offer mechanistic insight into the broad cytoprotection afforded cancer cells that activate the NRF2 transcription factor, as a route to escape killing by cytotoxic therapeutic treatments.

Common Genetic Polymorphisms Modify the Effect of Smoking on Absolute Risk of Bladder Cancer

Precis: Smoking prevention strategies may have more public health impact on subsets of the population that are at elevated genetic risk.

Erlotinib Prolongs Survival in Pancreatic Cancer by Blocking Gemcitabine-Induced MAPK Signals

Koji Miyabayashi, Hideaki Ijichi, Dai Mohri, Motohisa Tada, Keisuke Yamamoto, Yoshinari Asaoka, Tsuneo Ikenoue, Keisuke Tateishi, Yousuke Nakai, Hiroyuki Isayama, Yasuyuki Morishita, Masao Omata, Harold L. Moses, and Kazuhiko Koike

Precis: Findings address clinical questions concerning why the EGFR inhibitor erlotinib benefits KRAS-mutant pancreatic cancer patients when combined with gemcitabine.

mTOR Inhibitors Block Kaposi Sarcoma Growth by Inhibiting Essential Autocrine Growth Factors and Tumor Angiogenesis

Precis: Findings offer a new disease model and preclinical proof-of-concept for the use of mTOR inhibitors to treat a major HIV-associated cancer as well as related tumors that are also derived from endothelial cells.

Targeting the Deregulated Spliceosome Core Machinery in Cancer Cells Triggers mTOR Blockade and Autophagy

Virginie Quidvile, Samir Alsafadi, Aicha Goubar, Frédéric Commo, Véronique Scott, Catherine Pioche-Durieu, Isabelle Girault, Sonia Bacomans, Eric Le Cam, Vladimir Lazar, Suzette Delaloge, Mahasti Saghatchian, Patricia Pautier, Philippe Morice, Philippe Dessen, Stéphan Vagner, and Fabrice André

Precis: Certain Sm components of snRNPs involved in RNA splicing may constitute appealing therapeutic targets for a generalized strategy to treat cancer.

HDAC6 Inhibition Restores Ciliary Expression and Decreases Tumor Growth

Sergio A. Gradilone, Brynn N. Radtke, Pamela S. Bogert, Bing Q. Huang, Gabriella B. Gajdos, and Nicholas F. LaRusso

Precis: HDAC6 is essential in epithelial cells for formation of the primary cilia, organelles that are essential and sufficient to organize normal cell structure, growth, and function but that are disrupted during neoplastic transformation.

Sirtuin-1 Regulates Acinar-to-Ductal Metaplasia and Supports Cancer Cell Viability in Pancreatic Cancer

Précis: This study addresses a key factor in the disruption of acinar cell differentiation in the pancreas, a situation that predisposes to the development of pancreatic cancer.

ST6Gal-I Protein Expression Is Upregulated in Human Epithelial Tumors and Correlates with Stem Cell Markers in Normal Tissues and Colon Cancer Cell Lines

Amanda F. Swindall, Angelina I. Londoño-Joshi, Matthew J. Schultz, Naomi Fineberg, Donald J. Buchsbaum, and Susan L. Bellis

Précis: Results identify a sialyltransferase that may serve as a regulator of the stem-like phenotype in both normal and cancer cell populations.

ABOUT THE COVER

Antibodies against epithelial cell adhesion molecule (EpCAM) and cytokeratins are commonly used to capture and detect circulating tumor cells (CTC). However, these approaches are potentially hampered by the fact that migratory cancer cells may undergo a process called the epithelial-mesenchymal transition that is characterized by downregulation of epithelial markers, including cytokeratins and EpCAM. Images are of EpCAM(−)/CD45(−) circulating tumor cells immunostained with antibodies against cytokeratin (red, top), PLS3 (green, middle), and vimentin (orange, bottom). All sections were counterstained with DAPI (blue). PLS3 was expressed on EpCAM(−) CTCs that displayed reduced cytokeratin staining, accompanied by strong staining for vimentin. For details, see article by Yokobori and colleagues on page 2059.
