BREAKING ADVANCES

3197  Highlights from Recent Cancer Literature

REVIEW

3199  Sialic Acids Sweeten a Tumor’s Life
Christian Bül, Marieke A. Stoel, Martijn H. den Brok, and Gosse J. Adema

MICROENVIRONMENT AND IMMUNOLOGY

3205  Immune-Based Antitumor Effects of BRAF Inhibitors Rely on Signaling by CD40L and IFNγ
Ping-Chih Ho, Katrina M. Meeth, Yao-Chen Tsui, Bhaskar Srivastava, Marcus W. Bosenberg, and Susan M. Kaech
Précis: The robust antitumor properties of B-Raf kinase inhibitors appear to relate to an ability to correct immune escape, suggesting new uses for these drugs in cancer treatment through combination with active immunotherapies.

MOLECULAR AND CELLULAR PATHOBIOLOGY

3218  p53 Is Positively Regulated by miR-542-3p
Yemin Wang, Jen-Wei Huang, Maria Castella, David George Huntsman, and Toshiyasu Taniguchi
Précis: These findings define a microRNA that potently activates p53 and suppresses ribosome biogenesis, defining a novel core regulatory pathway in cell proliferation and survival.

3228  Global Transcriptome Analysis of Formalin-Fixed Prostate Cancer Specimens Identifies Biomarkers of Disease Recurrence
Précis: This study defines a novel biomarker panel that outperforms existing technology, with the potential to improve the clinical management of prostate cancer by predicting patients who are likely to progress to advanced metastatic disease.

PREVENTION AND EPIDEMIOLOGY

3248  Insulin, Estrogen, Inflammatory Markers, and Risk of Benign Proliferative Breast Disease
Chelsea Catsburg, Marc J. Gunter, Chu Chen, Michele L. Cote, Geoffrey C. Kabat, Rami Nassir, Lesley Tinker, Jean Wactawski-Wende, David L. Page, and Thomas E. Rohan
Précis: This study identifies independent risk factors for benign proliferative breast disease, suggesting that these factors directly influence the early stages of breast cancer development.

3259  Noninvasive Urinary Metabolomic Profiling Identifies Diagnostic and Prognostic Markers in Lung Cancer
Ewy A. Mathé, Andrew D. Patterson, Majda Hazanadar, Soumen K. Manna, Kristopher W. Krausz, Elise D. Bowman, Peter G. Shields, Jeffrey R. Idle, Philip B. Smith, Katsuhiro Anami, Dickran G. Kazandjian, Emmanuel Hatzakis, Frank J. Gonzalez, and Curtis C. Harris
Précis: Global metabolomics can be used to uncover novel metabolites detected in urine and lung tumor tissue, which have diagnostic and prognostic utility.
Novel Polymeric Nanoparticles for Intracellular Delivery of Peptide Cargos: Antitumor Efficacy of the BCL-2 Conversion Peptide NuBCP-9

Manoj Kumar, Dikshi Gupta, Gurpal Singh, Sapna Sharma, Madhusudan Bhat, C.K. Prashant, A.K. Dinda, Surender Kharbanda, Donald Kufe, and Harpal Singh

**Precis:** Striking demonstrations of in vivo efficacy are a highlight of this study, which reports an effective nanoparticle formulation for sustained delivery of anticancer peptides to target intracellular oncoproteins.

Notch3 Pathway Alterations in Ovarian Cancer

Wei Hu, Tao Liu, Cristina Ivan, Yunjie Sun, Jie Huang, Lingegowda S. Mangala, Takahito Miyake, Heather J. Dalton, Sunila Pradeep, Rajesh Rupaimoole, Rebecca A. Previs, Hee Dong Han, Justin Bottsford-Miller, Behrouz Ram, Yu Kang, Chad V. Pecot, Alpa M. Nick, Sherry Y. Wu, Je-Soong Lee, Vasudha Sehgal, Prahlad Ram, Jinsong Liu, Susan L. Tucker, Gabriel Lopez-Berestein, Keith A. Baggerly, Robert L. Coleman, and Anil K. Sood

**Precis:** These findings identify previously unknown mechanisms underlying an important signaling pathway in serous ovarian cancers, identifying new biomarker-driven approaches for therapy.

Inhibiting Tankyrases Sensitizes KRAS-Mutant Cancer Cells to MEK Inhibitors via FGFFR2 Feedback Signaling

Marie Schoumacher, Kristen E. Hurov, Joseph Lehrer, Yan Yan-Neale, Yuji Mishina, Dmytro Sonkin, Joshua M. Korn, Daisy Flemming, Michael D. Jones, Brandon Antonakos, Vesselina G. Cooke, Janine Steiger, Jebediah Ledell, Mark D. Stump, William R. Sellers, Nika N. Danial, and Wenlin Shao

**Precis:** This study addresses the long-standing challenge of developing highly effective therapeutics against KRAS-mutant cancers, also identifying a strategy to suppress a newly discovered resistance mechanism.

Separating Tumorigenicity from Bile Acid Regulatory Activity for Endocrine Hormone FGF19

Mei Zhou, Xuyan Wang, Van Phung, Darrin A. Lindhout, Kalyani Mondal, Jer-Yuan Hsu, Hong Yang, Mark Humphrey, Xunshan Ding, Taruna Arora, R. Marc Learned, Alex M. DePaoli, Hui Tian, and Lei Ling

**Precis:** These results conclusively link the cancerous properties of the FGF19–FGFR4 pathway in liver to STAT3 activation, with potential implications for how to improve the treatment of chronic liver disease and cancer.

IDH1 Mutations Alter Citric Acid Cycle Metabolism and Increase Dependence on Oxidative Mitochondrial Metabolism

Alexandra R. Grassian, Seth J. Parker, Shawna M. Davidson, Ajit S. Divakaruni, Courtney R. Green, Xiaomei Zhang, Kelly L. Slocum, Minying Pu, Fallon Lin, Chad Vickers, Carol Joud-Caldwell, Franklin Chung, Hong Yin, Erika D. Handly, Christopher Straub, Joseph D. Gownley, Matthew G. Vander Heiden, Anne N. Murphy, Raymond Pagliarini, and Christian M. Metollo

**Precis:** These results suggest therapeutic opportunities to exploit a set of metabolic vulnerabilities specific to IDH1 mutation in cancer cells.

Activation of SOX2 Expression by BRD4-NUT Oncogenic Fusion Drives Neoplastic Transformation in NUT Midline Carcinoma

Ranran Wang, Wei Liu, Christine M. Helier, James E. Bradner, Jason L. Hornick, Susan M. Janicki, Christopher A. French, and Jianxin You

**Precis:** The discovery of an aberrant stem-like cell proliferation associated with dysregulation of a factor that binds chromosomes during mitosis has general implications in cancers in which that factor is dysregulated.

Impaired JNK Signaling Cooperates with Kras<sup>G12D</sup> Expression to Accelerate Pancreatic Ductal Adenocarcinoma

Clare C. Davies, Emma Harvey, Raymond F.T. McMahon, Katherine G. Finegan, Frances Conover, Roger J. Davis, David A. Tuveson, and Cathy Tournier

**Precis:** Evidence gleaned from a preclinical model of pancreatic cancer suggests that JNK activation limits K-ras-induced tumor development, identifying a suppressor pathway in this system.
Transient Induction of ING4 by Myc Drives Prostate Epithelial Cell Differentiation and Its Disruption Drives Prostate Tumorigenesis

Penny L. Berger, Sander B. Frank, Veronique V. Schulz, Eric A. Nollet, Matthew J. Edick, Brittany Holly, Ting-Tung A. Chang, Galen Hostetter, Suwon Kim, and Cindy K. Miranti

Précis: This study identifies a pivotal signaling node that may explain why MYC and PTEN inactivation cooperate in prostate tumorigenesis.

E2F1 Responds to Ultraviolet Radiation by Directly Stimulating DNA Repair and Suppressing Carcinogenesis

Anup Kumar Biswas, David L. Mitchell, and David G. Johnson

Précis: This article defines a nontranscriptional function in DNA repair for the core cell-cycle regulatory transcription factor E2F1.
