### Table of Contents

**June 15, 2014 • Volume 74 • Number 12**

**BREAKING ADVANCES**

3197  Highlights from Recent Cancer Literature

**REVIEW**

3199  Sialic Acids Sweeten a Tumor’s Life
      Christian Büll, Marieke A. Stoe, Martijn H. den Brok, and Gosse J. Adema

**MICROENVIRONMENT AND IMMUNOLOGY**

3205  Immune-Based Antitumor Effects of BRAF Inhibitors Rely on Signaling by CD40L and IFNγ
      Ping-Chih Ho, Katrina M. Meeth, Yao-Chen Tsui, Bhaskar Srivastava, Marcus W. Rosenberg, and
      Susan M. Kaech
      **Précis:** The robust antitumor properties of B-Raf kinase inhibitors appear to relate to an ability to correct immune escape, suggesting new uses for these drugs in cancer treatment through combination with active immunotherapies.

**MOLECULAR AND CELLULAR PATHOBIOLOGY**

3218  p53 Is Positively Regulated by miR-542-3p
      Yemin Wang, Jen-Wei Huang, Maria Castella, David George Huntsman, and Toshiyasu Taniguchi
      **Précis:** These findings define a microRNA that potently activates p53 and suppresses ribosome biogenesis, defining a novel core regulatory pathway in cell proliferation and survival.

3228  Global Transcriptome Analysis of Formalin-Fixed Prostate Cancer Specimens Identifies Biomarkers of Disease Recurrence
      **Précis:** This study defines a novel biomarker panel that outperforms existing technology, with the potential to improve the clinical management of prostate cancer by predicting patients who are likely to progress to advanced metastatic disease.

3238  Colorectal Cancer Cell Lines Are Representative Models of the Main Molecular Subtypes of Primary Cancer
      Dmitri Mouradov, Clare Sloggett, Robert N. Jorissen, Christopher G. Love, Shan Li, Antony W. Burgess, Diego Arango, Robert L. Strausberg, Daniel Buchanan, Samuel Wormald, Liam O’Connor, Jennifer L. Wilding, David Bicknell, Ian P.M. Tomlinson, Walter F. Bodmer, John M. Mariadason, and Oliver M. Sieber
      **Précis:** This study positively addresses the question of how well in vitro-established colorectal cancer cell lines represent primary human tumors, in the absence of any stromal or organismal context, providing a genome-level validation that supports their continued use as tools to investigate colorectal cancer biology and drug responses.

**PREVENTION AND EPIDEMIOLOGY**

3248  Insulin, Estrogen, Inflammatory Markers, and Risk of Benign Proliferative Breast Disease
      Chelsea Catsburg, Marc J. Gunter, Chu Chen, Michele L. Cote, Geoffrey C. Kabat, Rami Nassir, Lesley Tinker, Jean Wactawski-Wende, David L. Page, and Thomas E. Rohan
      **Précis:** This study identifies independent risk factors for benign proliferative breast disease, suggesting that these factors directly influence the early stages of breast cancer development.

3259  Noninvasive Urinary Metabolomic Profiling Identifies Diagnostic and Prognostic Markers in Lung Cancer
      Ewy A. Mathé, Andrew D. Patterson, Majda Hazanadar, Soumen K. Manna, Kristopher W. Krausz, Elise D. Bowman, Peter G. Shields, Jeffrey R. Idle, Philip B. Smith, Katsuhiro Anami, Dickran G. Kazandjian, Emmanuel Hatzakis, Frank J. Gonzalez, and Curtis C. Harris
      **Précis:** Global metabolomics can be used to uncover novel metabolites detected in urine and lung tumor tissue, which have diagnostic and prognostic utility.
THERAPEUTICS, TARGETS, AND CHEMICAL BIOLOGY

3271 Novel Polymeric Nanoparticles for Intracellular Delivery of Peptide Cargos: Antitumor Efficacy of the BCL-2 Conversion Peptide NuBCP-9
Manoj Kumar, Dikshi Gupta, Gurpal Singh, Sapna Sharma, Madhusudan Bhat, C.K. Prashant, A.K. Dinda, Surender Kharbanda, Donald Kufe, and Harpal Singh

Précis: Striking demonstrations of in vivo efficacy are a highlight of this study, which reports an effective nanoparticle formulation for sustained delivery of anticancer peptides to target intracellular oncoproteins.

3282 Notch3 Pathway Alterations in Ovarian Cancer
Wei Hu, Tao Liu, Cristina Ivan, Yunjie Sun, Jie Huang, Lingegowda S. Mangala, Takahito Miyake, Heather J. Dalton, Sunila Pradeep, Rajesh Rupaimoole, Rebecca A. Previs, Hee Dong Han, Justin Bottsford-Miller, Behrouz Zand, Yu Kang, Chad V. Pecot, Alpa M. Nick, Sherry Y. Wu, Je-Seog Lee, Vasudha Sehgal, Prahlad Ram, Jinsong Liu, Susan L. Tucker, Gabriel Lopez-Berestein, Keith A. Baggerly, Robert L. Coleman, and Anil K. Sood

Précis: These findings identify previously unknown mechanisms underlying an important signaling pathway in serous ovarian cancers, identifying new biomarker-driven approaches for therapy.

3294 Inhibiting Tankyrases Sensitizes KRAS-Mutant Cancer Cells to MEK Inhibitors via FGFR2 Feedback Signaling
Marie Schoumacher, Kristen E. Hurov, Joseph Lehár, Yan Yan-Neale, Yuji Mishina, Dmitriy Sonkin, Joshua M. Korn, Daisy Fleming, Michael D. Jones, Brandon Antonakos, Vesselin G. Cooke, Janine Steiger, Jebediah Ledell, Mark D. Stump, William R. Sellers, Nika N. Danial, and Wenlin Shao

Précis: This study addresses the long-standing challenge of developing highly effective therapeutics against KRAS-mutant cancers, also identifying a strategy to suppress a newly discovered resistance mechanism.

3306 Separating Tumorigenicity from Bile Acid Regulatory Activity for Endocrine Hormone FGF19
Mei Zhou, Xueyan Wang, Van Phung, Darrin A. Lindhout, Kalyani Mondal, Jer-Yuan Hsu, Hong Yang, Mark Humphrey, Xunshan Ding, Taruna Arora, R. Marc Learned, Alex M. DePaoli, Hui Tian, and Lei Ling

Précis: These results conclusively link the cancerous properties of the FGF19–FGFR4 pathway in liver to STAT3 activation, with potential implications for how to improve the treatment of chronic liver disease and cancer.

3317 IDH1 Mutations Alter Citric Acid Cycle Metabolism and Increase Dependence on Oxidative Mitochondrial Metabolism
Alexandra R. Grassian, Seth J. Parker, Shawn M. Davidson, Aji S. Divakaruni, Courtney R. Green, Xiamei Zhang, Kelly L. Slocum, Minying Pu, Fallon Lin, Chad Vickers, Carol Joud-Caldwell, Franklin Chung, Hong Yin, Erika D. Handly, Christopher Straub, Joseph D. Growney, Matthew G. Vander Heiden, Anne N. Murphy, Raymond Pagliarini, and Christian M. Metallo

Précis: These results suggest therapeutic opportunities to exploit a set of metabolic vulnerabilities specific to IDH1 mutation in cancer cells.

TUMOR AND STEM CELL BIOLOGY

3322 Activation of SOX2 Expression by BRD4-NUT Oncogenic Fusion Drives Neoplastic Transformation in NUT Midline Carcinoma
Ranran Wang, Wei Liu, Christine M. Helier, James E. Bradner, Jason L. Hornick, Susan M. Janicki, Christopher A. French, and Jianxin You

Précis: The discovery of an aberrant stem-like cell proliferation associated with dysregulation of a factor that binds chromosomes during mitosis has general implications in cancers in which that factor is dysregulated.

3344 Impaired JNK Signaling Cooperates with KrasG12D Expression to Accelerate Pancreatic Ductal Adenocarcinoma
Clare C. Davies, Emma Harvey, Raymond F.T. McMahon, Katherine G. Finegan, Frances Connor, Roger J. Davis, David A. Tuveson, and Cathy Tournier

Précis: Evidence gleaned from a preclinical model of pancreatic cancer suggests that JNK activation limits K-ras-induced tumor development, identifying a suppressor pathway in this system.
This study identifies a pivotal signaling node that may explain why MYC and PTEN inactivation cooperate in prostate tumorigenesis.

**E2F1 Responds to Ultraviolet Radiation by Directly Stimulating DNA Repair and Suppressing Carcinogenesis**

Anup Kumar Biswas, David L. Mitchell, and David G. Johnson

**Précis:** This article defines a nontranscriptional function in DNA repair for the core cell-cycle regulatory transcription factor E2F1.
