REVIEWS

4955 Emerging Potential of Therapeutic Targeting of Ubiquitin-Specific Proteases in the Treatment of Cancer
Anupama Pal, Matthew A. Young, and Nicholas J. Donato

4967 Sonic Hedgehog Signaling in Basal Cell Nevus Syndrome
Mohammad Athar, Changzhao Li, Arianna L. Kim, Vladimir S. Spiegelman, and David R. Bickers

PERSPECTIVE

4976 Obesity, Cholesterol Metabolism, and Breast Cancer Pathogenesis

INTEGRATED SYSTEMS AND TECHNOLOGIES

4983 High-Throughput Time-Resolved FRET Reveals Akt/PKB Activation as a Poor Prognostic Marker in Breast Cancer
Selvaraju Veeriah, Pierre Leboucher, Julien de Naurois, Nirmal Jethwa, Emma Nye, Tamara Bunting, Richard Stone, Gordon Stamp, Véronique Calleja, Stefanie S. Jeffrey, Peter J. Parker, and Banañshe Larijani

Précis: Using a novel quantitative imaging platform to determine the status of an activated biomarker in cancer patients may better identify high-risk patients who could benefit from a suitable targeted drug therapy.

MICROENVIRONMENT AND IMMUNOLOGY

4996 Neutralizing Murine TGFβR2 Promotes a Differentiated Tumor Cell Phenotype and Inhibits Pancreatic Cancer Metastasis
Katherine T. Ostatoff, Bercin Kutluk Cenik, Miao Wang, Risheng Ye, Xiaohong Xu, Desiree Nugent, Moriah M. Hagoopian, Mary Topalovski, Lee B. Rivera, Kyla D. Carroll, and Rolf A. Brekken

Précis: This study demonstrates that TGFβ signaling in stromal cells directly affects tumor cell plasticity and the metastatic capacity of pancreatic tumors.

5008 TLR7 Promotes Tumor Progression, Chemotherapy Resistance, and Poor Clinical Outcomes in Non–Small Cell Lung Cancer
Saradiya Chatterjee, Lucie Crozet, Diane Damotte, Kristina Iribarren, Catherine Schramm, Marco Alfano, Audrey Lupo, Julien Cherfils-Vicini, Jeremy Goc, Sandrine Katsahian, Mohammad Younes, Marie Caroline Dieu-Nosjean, Wolf Herman Fridman, Catherine Sautès-Fridman, and Isabelle Cremer

Précis: Activation of an immune stimulatory molecule, TLR7, studied mainly in immune cells but also highly expressed in human lung carcinoma cells, confers powerful tumor growth advantage that may be mediated in part by NF-κB, perhaps helping explain its contributions to cancer.

5019 Optimal Effector Functions in Human Natural Killer Cells Rely upon Autocrine Bone Morphogenetic Protein Signaling
Neil C. Robson, Laura Hidalgo, Tristan McAlpine, Heng Wei, Víctor G. Martínez, Ana Estrena, Gustavo J. Melen, Andrew S. MacDonald, Alexander Phythin-Adams, Rosa Sacedón, Eugene Maraskovsky, Jonathan Cebon, Manuel Ramírez, Angeles Vicente, and Alberto Varas

Précis: The TGFβ superfamily members BMP-2 and BMP-6 are produced by and are required to support the optimal functions of natural killer immune cells, suggesting new ways to enhance the powerful capability of these cells to eradicate tumors.

5032 Stress Signaling from Human Mammary Epithelial Cells Contributes to Phenotypes of Mammographic Density
Rosa Anna DeFilippis, Colleen Fordyce, Kelley Patten, Hang Chang, Jianxin Zhao, Gerald V. Fontenay, Karla Kerlikowske, Bahram Parvin, and Thea D. Tlsty

Précis: These findings provide new insights into how high mammographic density arises in the breast and why this condition is associated with breast cancer risk, with implications for the definition of novel invention targets to prevent breast cancer.

5045 Molecular Homology and Difference between Spontaneous Canine Mammary Cancer and Human Breast Cancer
Deli Liu, Huan Xiong, Angela E. Ellis, Nicole C. Northrup, Carlos O. Rodriguez Jr, Ruth M. O’Regan, Stephen Dalton, and Shaying Zhao

Précis: This study of spontaneous mammary cancers that arise in dogs offers a novel perspective on critical questions in breast cancer research.
CSF1/CSF1R Blockade Reprograms Tumor-Infiltrating Macrophages and Improves Response to T-cell Checkpoint Immunotherapy in Pancreatic Cancer Models

Yu Zhu, Brett L. Knolhoff, Melissa A. Meyer, Timothy M. Nywening, Brian L. West, Jingjin Luo, Andrea Wang-Gillam, S. Peter Goedegebuure, David C. Linehan, and David G. DeNardo

Précis: These preclinical findings offer a rationale to empower therapeutic effects of T-cell checkpoint-based immunotherapeutics that block PD-1 and CTLA-4 by reprogramming of immunosuppressive myeloid cells that are abundant in the tumor microenvironment.

Macrophage Inflammatory Protein Derivative ECI301 Enhances the Alarmin-Associated Abscopal Benefits of Tumor Radiotherapy

Shiro Kanegasaki, Kouji Matsushima, Kenshiro Shiraishi, Keiichi Nakagawa, and Tomoko Tsuchiya

Précis: This study suggests mechanistic insights into a long recognized but little understood phenomenon in radiotherapy, the abscopal effect, which refers to antitumor benefits outside the irradiated field.

Natural Killer Cells Eradicate Galectin-1–Deficient Glioma in the Absence of Adaptive Immunity

Gregory J. Baker, Peter Chockley, Viveka Nand Yadav, Robert Doherty, Michael Ritt, Sivara Jayaramanarsh, Maria G. Castro, and Pedro R. Lowenstein

Précis: Blocking an important mechanism of immune escape in glioma mediated by galectin-1 overexpression may be sufficient to restore the ability of natural killer cells to eradicate this type of brain cancer, without the need of adaptive immune functions.

BMP4 Inhibits Breast Cancer Metastasis by Blocking Myeloid-Derived Suppressor Cell Activity

Yuan Cao, Clare Y. Slaney, Bradley N. Bidwell, Belinda S. Parker, Cameron N. Johnstone, Jai Rautela, Bedrich L. Eckhardt, and Robin L. Anderson

Précis: This study demonstrates that BMP4 can inhibit metastasis by reducing NF-κB activity in tumor cells, leading to a suppression of G-CSF secretion and a consequential reduction in the number of metastases promoting myeloid-derived suppressor cells.

A Novel Wnt Regulatory Axis in Endometrioid Endometrial Cancer

Yu Zhao, Yihua Yang, Jone Trovik, Kun Sun, Liang Zhou, Peiyong Jiang, Tat-San Lau, Erling A. Hoivik, Helga B. Salvesen, Hao Sun, and Huating Wang

Précis: These findings establish a novel Wnt/b-catenin regulatory axis that involves a tumor suppressive member of the cadherin family, protocadherin-10, and a noncoding RNA, MALAT1, that supports the development of a subtype of endometrial cancer.

Natural Allelic Variations in Glutathione Peroxidase-1 Affect Its Subcellular Localization and Function

Soumen Bera, Frank Weinberg, Dede N. Ekoue, Kristine Ansenger-Fricano, Mao Mao, Marcelo G. Bonini, and Alan M. Diamond

Précis: Genetic variations in glutathione peroxidase-1 that affect the risk of several types of cancer are shown here to affect the function of this enzyme, with implications for understanding its fundamental roles in cancer pathophysiology.

TIGAR Has a Dual Role in Cancer Cell Survival through Regulating Apoptosis and Autophagy

Jia-Ming Xie, Bin Li, Hong-Pei Yu, Quan-Geng Gao, Wei Li, Hao-Rong Wu, and Zheng-Hong Qin

Précis: These results illuminate a new mechanism by which a key inhibitor of cell death helps regulate the response of cancer cells to chemotherapeutic drugs, with possible implications as a drug response biomarker.

Validation and Structural Characterization of the LEDGF/p75–MLL Interface as a New Target for the Treatment of MLL-Dependent Leukemia

Kateřina Cermáková, Petr Tesína, Jonas Deuentlemeester, Sara El Ashkar, Hélène Méreau, Juerg Schwaller, Pavlina Rezáčová, Vaclav Veverka, and Jan De Rijck

Précis: This study identifies a potential molecular foothold in epigenetic therapy aimed at altering transcriptional programs in cancer cells to selectively trigger their demise.
Armed Oncolytic Virus Enhances Immune Therapy
Toni M. Brand, Mari Iida, Andrew P. Stein, Kelsey L. Corrigan, Cara M. Braverman, Neha Luthar, Mahmoud Toulany, Parkash S. Gill, Ravi Salgia, Randall J. Kimple, and Deric L. Wheeler

 précis: This preclinical study provides a rationale to target the oncogenic receptor kinase AXL in cancers that exhibit intrinsic or acquired resistance to the anti-EGFR drug cetuximab, with immediate implications for the clinical evaluation of AXL inhibitors in cetuximab-resistant cancers.

RPA Inhibition Increases Replication Stress and Suppresses Tumor Growth
Jason G. Glanzer, Shengqin Liu, Ling Wang, Adam Mosel, Aimin Peng, and Greg S. Oakley

 précis: By targeting a lynchpin of DNA replication, a compound that heightens DNA replication stress in cancer cells may offer a broadly useful new strategy for treatment.

HSV-sr39TK Positron Emission Tomography and Suicide Gene Elimination of Human Hematopoietic Stem Cells and Their Progeny in Humanized Mice
Eric H. Gschwend, Melissa N. McCracken, Michael L. Kaufman, Michelle Ho, Roger P. Hollis, Xiaoyan Wang, Navdeep Saini, Richard C. Koya, Thine Chodon, Antoni Ribas, Owen N. Witte, and Donald B. Kohn

 précis: These results support the clinical development of a dual use imaging-suicide gene in immunotherapy and provide insights into the reversible engraftment of human hematopoietic stem cells.

Quantitative Optical Imaging of Primary Tumor Organoid Metabolism Predicts Drug Response in Breast Cancer
Alex J. Walsh, Rebecca S. Cook, Melinda E. Sanders, Luigi Aurisicchio, Gennaro Ciliberto, Carlos L. Arteaga, and Melissa C. Skala

 précis: This study demonstrates that cellular-level optical imaging of metabolic coenzymes resolves early, heterogeneous drug responses within primary tumor organoid cultures that are consistent with long-term in vivo tumor response.

Armed Oncolytic Virus Enhances Immune Functions of Chimeric Antigen Receptor–Modified T Cells in Solid Tumors
Nobuhiro Nishio, Jila Dtaconu, Hao Liu, Vincenzo Cerullo, Ignazio Caruana, Valentina Hoyos, Lisa Bouchier-Hayes, Barbara Savoldo, and Gianpietro Dotti

 précis: The cytokine/chemokine-armed virus described in this report may improve the effectiveness of CAR T-cell therapy in solid tumors, where this therapy has not been nearly as effective as in liquid tumors.

<tr>
<td>5256</td>
<td>miR149 Functions as a Tumor Suppressor by Controlling Breast Epithelial Cell Migration and Invasion</td>
<td>Annabell Bischoff, Bettina Huck, Bettina Keller, Michaela Strotbek, Simone Schmid, Melanie Boerries, Hauke Busch, Dafne Müller, and Monilola A. Olayioye</td>
<td><em>Précis:</em> These findings define the molecular function of miR-149, which is downregulated in aggressive and often untreatable basal-like breast cancers, with potential implications for the design of future miRNA-based therapeutics in this disease setting.</td>
</tr>
<tr>
<td>5266</td>
<td>RB Family Tumor Suppressor Activity May Not Relate to Active Silencing of E2F Target Genes</td>
<td>Tinke L. Vormer, Kamila Wojciechowicz, Marleen Dekker, Sandra de Vries, Anja van der Wal, Elly Delzemme-Goette, Sjalin H. Naik, Ji-Ying Song, Jan-Hermen Dannenberg, Jacob B. Hansen, and Hein te Riele</td>
<td><em>Précis:</em> These provocative findings suggest that RB tumor suppressor activity does not require interaction with LxCxE-containing proteins, implying it may not involve silencing of E2F target genes as previously thought.</td>
</tr>
<tr>
<td>5277</td>
<td>Runx2 Is a Novel Regulator of Mammary Epithelial Cell Fate in Development and Breast Cancer</td>
<td>Thomas W. Owens, Renee L. Rogers, Sarah A. Best, Anita Ledger, Anne-Marie Mooney, Alison Ferguson, Paul Shore, Alexander Swarbrick, Christopher J. Ormandy, Peter T. Simpson, Jason S. Carroll, Jane E. Visvader, and Matthew J. Naylor</td>
<td><em>Précis:</em> These results establish a novel function for Runx2 of mammary cell fate and breast cancer that may offer a novel generalized route for therapeutic interventions in this malignancy.</td>
</tr>
<tr>
<td>5287</td>
<td>Ubiquitin-like Protein FAT10 Promotes the Invasion and Metastasis of Hepatocellular Carcinoma by Modifying β-Catenin Degradation</td>
<td>Rongfa Yuan, Kai Wang, Junwen Hu, Chen Yan, Ming Li, Xin Yu, Xixue Liu, Jun Lei, Wuhua Guo, Linquan Wu, Kui Hong, and Jianghua Shao</td>
<td><em>Précis:</em> These findings link two drivers of invasion and metastasis in liver cancer and identify a novel pathway for β-catenin control that may have relevance in other cancers.</td>

ABOUT THE COVER

Non-invasive in vivo imaging of gene-modified human hematopoietic stem cells and their progeny can be achieved using positron image tomography (PET), shown here as coronal and sagittal plane overlays on X-ray computed tomography scans. Imaging after systemically administered $^{18}$F-FHBG reveals accumulation of probe localized to areas of hematopoietic engraftment such as the humerus, tibia, femur, vertebrae, sternum, and thymus. Background probe uptakes in the gastrointestinal tract and gall bladder, present in non-humanized NSG and mock-transduced humanized mice have been artificially masked for clarity. For details, see article by Gschwend on page 5173.
