BREAKING ADVANCES

5935 Highlights from Recent Cancer Literature

REVIEWS

5937 Phenotype Switching: Tumor Cell Plasticity as a Resistance Mechanism and Target for Therapy
Kristel Kemper, Pauline L. de Goeje, Daniel S. Peeper, and Renée van Amerongen

5942 αvβ6 Expression in Myoepithelial Cells: A Novel Marker for Predicting DCIS Progression with Therapeutic Potential
Michael D. Allen, John F. Marshall, and J. Louise Jones

PRIORITY REPORT

5948 Synergy between the NAMPT Inhibitor GMX1777(8) and Pemetrexed in Non–Small Cell Lung Cancer Cells Is Mediated by PARP Activation and Enhanced NAD Consumption
Manuel Chan, Michel Gravel, Alexandre Bramouillé, Gaëlle Bridon, Dina Avizonis, Gordon C. Shore, and Anne Roulston

5978 Modeling Lung Cancer Evolution and Preclinical Response by Orthotopic Mouse Allografts
Chiara Ambrogio, Francisco J. Carmona, August Vidal, Mattia Falcone, Patricia Nieto, Octavio A. Romero, Sara Puertas, Miguel Vizoso, Ernest Nadal, Teresa Poggio,Montserrat Sánchez-Cespedes, Manel Esteller, Francisca Mulero, Claudia Voena, Roberto Chiarle, Mariano Barbacid, David Santamaría, and Alberto Villanueva

CLINICAL STUDIES

5955 A Quantitative Sensory Analysis of Peripheral Neuropathy in Colorectal Cancer and Its Exacerbation by Oxaliplatin Chemotherapy
Mariana de Carvalho Barbosa, Alyssa K. Kosturakis, Cathy Eng, Gwen Wendelschafer-Crabb, William R. Kennedy, Donald A. Simone, Xin S. Wang, Charles S. Cleeland, and Patrick M. Dougherty

CLINICAL STUDIES

5989 The Alarmin HMGN1 Contributes to Antitumor Immunity and Is a Potent Immunoadjuvant
Feng Wei, De Yang, Poonam Tewary, Yana Li, Sandra Li, Xin Chen, O.M. Zack Howard, Michael Bustin, and Joost J. Oppenheim

INTEGRATED SYSTEMS AND TECHNOLOGIES

5963 Network Modeling of TGFβ Signaling in Hepatocellular Carcinoma Epithelial-to-Mesenchymal Transition Reveals Joint Sonic Hedgehog and Wnt Pathway Activation
Steven Nathaniel Steinway, Jorge G.T. Zañudo, Wei Ding, Carl Bart Rountree, David J. Feith, Thomas P. Loughran Jr, and Reka Albert

5977 Modeling Lung Cancer Evolution and Preclinical Response by Orthotopic Mouse Allografts
Chiara Ambrogio, Francisco J. Carmona, August Vidal, Mattia Falcone, Patricia Nieto, Octavio A. Romero, Sara Puertas, Miguel Vizoso, Ernest Nadal, Teresa Poggio, Montserrat Sánchez-Cespedes, Manel Esteller, Francisca Mulero, Claudia Voena, Roberto Chiarle, Mariano Barbacid, David Santamaría, and Alberto Villanueva

MICROENVIRONMENT AND IMMUNOLOGY

5989 The Alarmin HMGN1 Contributes to Antitumor Immunity and Is a Potent Immunoadjuvant
Feng Wei, De Yang, Poonam Tewary, Yana Li, Sandra Li, Xin Chen, O.M. Zack Howard, Michael Bustin, and Joost J. Oppenheim

Précis: An HMGB1-related protein that also functions as a danger signal/alarmin to promote T-cell immunity is found to contribute to T cell-dependent antitumor responses, with implications for its possible use as an adjuvant to heighten responses to cancer vaccines.

**MOLECULAR AND CELLULAR PATHOBIOLOGY**

| 6048 | Reducing CD73 Expression by IL1β-Programmed Th17 Cells Improves Immunotherapeutic Control of Tumors | Shilpak Chatterjee, Krishnamurthy Thyagarajan, Pravin Kesavani, Jin H. Song, Myrosiawa Soloshchenko, Jianing Fu, Stefanie M. Bailey, Chentharmarkshan Vasu, Andrew S. Kraft, Chrystal M. Paulos, Xue-Zhong Yu, and Shikhar Mehrotra |

**Précis:** These findings show that including TGFβ in ex vivo cultures used to program Th17 cells damages their immunotherapeutic potential, and they show how this potential can be more potently realized for adoptive T-cell immunotherapy in cancer patients.
HTLV-1 bZIP Factor HBZ Promotes Cell Proliferation and Genetic Instability by Activating OncomiRs

Céline Vernin, Morgan Thenoz, Christiane Pinatel, Antoine Gessain, Olivier Gout, Marie-Hélène Delfau-Larue, Nicolas Nazaret, Catherine Legras-Lachuer, Eric Wattel, and Franck Mortreux

Précis: As one of the few viruses definitively linked to cancer, HTLV-1 retains interest as a tool to gain insights into the pathogenic origins of cancer, hereby challenging the long-standing idea that the viral gene product Tax is most critical in directing early leukemogenesis.

ALK-Dependent Control of Hypoxia-Inducible Factors Mediates Tumor Growth and Metastasis

Cinzia Martinengo, Teresa Poggio, Matteo Menotti, Maria Stella Scalzo, Cristina Ambrogio, Elisa Pellegrino, Ludovica Riera, Roberto Piva, Domenico Ribatti, Fabio Pastorino, Patrizia Perri, Mirco Ponzoni, Qi Wang, Claudia Voena, and Roberto Chiarle

Précis: This study offers a rationale to explore ALK kinase inhibitors as effective treatments for certain lymphomas and non–small cell lung cancers, where ALK activity affects hypoxia responses and angiogenesis.

Metastatic Heterogeneity of Breast Cancer Cells Is Associated with Expression of a Heterogeneous TGFβ-Activating miR424–503 Gene Cluster

Yun Li, Wei Li, Zhe Ying, Han Tian, Xun Zhu, Jun Li, and Mengfeng Li

Précis: These findings define a microRNA cluster that controls the intensity of TGFβ signaling and metastatic response in breast cancer cells, with possible implications in cancer-associated deregulation of TGFβ signaling generally.

Stress Response Protein Cirp Links Inflammation and Tumorigenesis in Colitis-Associated Cancer

Toshiharu Sakurai, Hiroshi Kashida, Tomohiro Watanabe, Satoru Hagiwara, Tsunekazu Mizushima, Hideki Iijima, Naoshi Nishida, Hiroki Higashitsuji, Jun Fujita, and Masatoshi Kudo

Précis: A little-studied RNA binding protein is found to act as a positive modifier of inflammation-driven colon cancers, contributing to the development of inflammatory bowel disease as well as colitis-associated cancer in established preclinical models.
6173 A Recurrent Activating PLCG1 Mutation in Cardiac Angiosarcomas Increases Apoptosis Resistance and Invasiveness of Endothelial Cells
Kristin Kunze, Tilmann Spieker, Ulrike Gamerdinger, Kerstin Nau, Johannes Berger, Thomas Dreyer, Jürgen R. Sindermann, Andreas Hoffmeier, Stefan Gattenlöcher, and Andreas Bräuniger
*Précis:* Mutation of PLCG1 identified in rare tumor may provide insights into apoptosis resistance and invasion.

6184 Genetic Deletion of AEG-1 Prevents Hepatocarcinogenesis
*Précis:* This potentially seminal study unravels a novel role for the AEG-1 oncoprotein in shaping the tumor microenvironment in a manner that is essential for liver cancer development.

6194 Vitamin D Suppresses Leptin Stimulation of Cancer Growth through microRNA
Ravi Kasiappan, Yuefeng Sun, Panida Lungchukiet, Waise Quarni, Xiaohong Zhang, and Wenlong Bai
*Précis:* This study suggests that vitamin D supplements may help obese women reduce their risk of cancer.

**PREVENTION AND EPIDEMIOLOGY**

6205 Therapeutic Targeting of BRCA1-Mutated Breast Cancers with Agents That Activate DNA Repair
Elizabeth Alli, David Solow-Cordero, Stephanie C. Casey, and James M. Ford
*Précis:* This work offers a preclinical proof of concept for a wholly new approach to chemoprevention in carriers of BRCA1 mutations as a strategy to reduce the prevalence of BRCA1-associated malignancy.

**THERAPEUTICS, TARGETS, AND CHEMICAL BIOLOGY**

6216 Pretargeted Dual-Modality Immuno-SPECT and Near-Infrared Fluorescence Imaging for Image-Guided Surgery of Prostate Cancer
*Précis:* This study describes a major advancement to methods used in surgical resections of primary prostate cancer, where image-guided techniques are increasingly important and can extend time to progression in patients.

6224 Pancreatic Cancer—Specific Cell Death Induced In Vivo by Cytoplasmic-Delivered Polyinosine—Polycytidylic Acid
Praveen Bhoopathi, Bridget A. Quinn, Qin Gui, Xue-Ning Shen, Steven R. Grossman, Swadesh K. Das, Devanand Sarkar, Paul B. Fisher, and Luni Emdad
*Précis:* These findings offer a preclinical proof of concept for immediate evaluation of an immune adjuvant that also triggers apoptosis in pancreatic cancer cells, as a novel type of immunochemo-therapy to treat pancreatic cancer.

6236 A Small-Molecule Modulator of the Tumor-Suppressor miR34a Inhibits the Growth of Hepatocellular Carcinoma
Zhangang Xiao, Chi Han Li, Stephen L. Chan, Feiyue Xu, Lu Feng, Yan Wang, Jian-Dong Jiang, Joseph J.Y. Sung, Christopher H.K. Cheng, and Yangchao Chen
*Précis:* These findings offer preclinical proof of concept for a lead small molecule candidate as a new class of therapeutic for liver cancer, based on restoration of miR-34a tumor suppressor function.
Activated d16HER2 Homodimers and SRC Kinase Mediate Optimal Efficacy for Trastuzumab
Lorenzo Castagnoli, Manuela Iezzi, Gaia C. Ghedini, Valentina Ciravolo, Giulia Marzano, Alessia Lamolinara, Roberta Zappasodi, Patrizia Gasparini, Manuela Campiglio, Augusto Amici, Claudia Chiocioni, Arianna Palladini, Pier Luigi Lollini, Tiziana Triulzi, Sylvie Menard, Patrizia Nanni, Elda Tagliabue, and Serenella M. Pupa
Précis: Mouse genetic and clinical results establish the variant HER2 signaling axis as a marker for optimal responses to trastuzumab treatment, with immediate clinical implications.

Effective Cancer Vaccine Platform Based on Attenuated Salmonella and a Type III Secretion System
Précis: This study describes an orally administered Salmonella-based vector system that can present tumor antigens to the immune system in a manner that yields potent antitumor responses, offering a novel platform for the engineering of more effective cancer vaccines.

Targeted Noninvasive Imaging of EGFR-Expressing Orthotopic Pancreatic Cancer Using Multispectral Optoacoustic Tomography
Shanice V. Hudson, Justin S. Huang, Wenyuan Yin, Sabrin Albeituni, Jamie Rush, Anil Khanal, Jun Yan, Brian P. Cereso, Hermann B. Friebes, and Lacey R. McNally
Précis: The technology described in this report offers the potential to detect pancreatic tumors with higher specificity and sensitivity, in both the preclinical and clinical settings, than existing technology permits.

miR326 Maturation Is Crucial for VEGF-C-Driven Cortactin Expression and Esophageal Cancer Progression
Chih-Chen Hong, Pai-Sheng Chen, Jen Chio, Chung-Feng Chiu, Ching-Yao Yang, Michael Hsiao, Yi-Wen Chang, Yang-Hao Yu, Mien-Chie Hung, Nai-Wen Hsu, Shih-Gwo Shiah, Nan-Yung Hsu, and Jen-Liang Su
Précis: These findings offer insights into how a key driver of esophageal cancer enhances its robust invasive and metastatic properties, with potential implications for the development of new biomarkers or therapies in this setting.

Distinct Subpopulations of Head and Neck Cancer Cells with Different Levels of Intracellular Reactive Oxygen Species Exhibit Diverse Stemness, Proliferation, and Chemosensitivity
Ching-Wen Chang, Yu-Syuan Chen, Shi-Huey Chou, Chia-Li Han, Yu-Ju Chen, Cheng-Chieh Yang, Chih-Yang Huang, and Jeng-Fan Lo
Précis: These findings suggest that strategies to stimulate low intracellular ROS levels, found here to be associated with stemness and chemoresistance in head and neck squamous cancers, should be explored clinically in combination with conventional chemotherapy.

PAD2 Overexpression in Transgenic Mice Promotes Spontaneous Skin Neoplasia
Précis: These findings provide a mechanistic rationale to target a highly tractable enzyme to prevent or treat inflammation-associated skin carcinomas.

SCCA1/SerpinB3 Promotes Oncogenesis and Epithelial–Mesenchymal Transition via the Unfolded Protein Response and IL6 Signaling
Namratha Sheshadri, Joseph M. Catanzaro, Alex J. Bott, Yu Sun, Erica Ullman, Emily I. Chen, Ji-An Pan, Song Wu, Howard C. Crawford, Jianhua Zhang, and Wei-Xing Zong
Précis: A protease inhibitor that is overexpressed in many human cancers is found to promote tumorigenesis by upregulating IL6 signaling in the tumor microenvironment.
Table of Contents

6330  Transient SNAIL1 Expression Is Necessary for Metastatic Competence in Breast Cancer
Hung D. Tran, Krishna Luitel, Michael Kim, Kun Zhang, Gregory D. Longmore, and David D. Tran
Précis: These findings provide a compelling genetic rationale to target metastasis by impeding a major regulator of this process despite its transient requirement.

6341  Holo-Retinol–Binding Protein and Its Receptor STRA6 Drive Oncogenic Transformation
Daniel C. Berry, Liraz Levi, and Noa Noy
Précis: Results suggest that the blood carrier of vitamin A and its cell surface transporter and signaling receptor STRA6 may comprise novel targets for cancer therapy.

6352  Ceramide Kinase Promotes Tumor Cell Survival and Mammary Tumor Recurrence
Ania W. Payne, Dhruv K. Pant, Tien-Chi Pan, and Lewis A. Chodosh
Précis: Results identify an actionable pathway in breast cancer patients that might be blocked during chemotherapy to limit tumor recurrence and extend survival.

6364  Notch Signaling Drives Stemness and Tumorigenicity of Esophageal Adenocarcinoma
Zhiqiang Wang, Thiago G. Da Silva, Ke Jin, Xiaoxia Han, Prathibha Ranganathan, Xiaoxia Zhu, Avencia Sanchez-Mejias, Feng Bai, Bin Li, Dennis Liang Fei, Kelly Weaver, Rodrigo Vasquez-Del Carpio, Anna E. Moscowitz, Vadim P. Koshenkov, Lilly Sanchez, Lynne Sparling, Xin-Hai Pei, Dido Franceschi, Afonso Ribeiro, David J. Robbins, Alan S. Livingstone, and Anthony J. Capobianco
Précis: This study provides a preclinical proof of concept for the repositioning of gamma-secretase inhibitors, previously evaluated in clinical trials, as a new treatment for aggressive esophageal cancers.

ABOUT THE COVER

Astrocyte elevated gene-1 (AEG-1) is an oncogene that is overexpressed in all cancers. Although the oncogenic function of AEG-1 has been studied in tumor cells, as yet the role of AEG-1 in tumor microenvironment cells has not been analyzed. Using immunofluorescence it was documented that AEG-1 is expressed at a high level in macrophages, and functional studies documented that macrophage AEG-1 plays an important role in regulating NF-κB activation and thereby initiation of hepatocarcinogenesis. For details, see article by Robertson and colleagues on page 6184.
