BREAKING ADVANCES

4667 Highlights from Recent Cancer Literature

REVIEWS

4669 Understanding the Unique Attributes of MUC16 (CA125): Potential Implications in Targeted Therapy
Srustin Das and Surinder K. Batra

4675 Application of Evolutionary Principles to Cancer Therapy
Pedro M. Enriquez-Navas, Jonathan W. Wojtkowiak, and Robert A. Gatenby

PRIORITY REPORT

4681 Identification of Cancer-Associated Fibroblasts in Circulating Blood from Patients with Metastatic Breast Cancer
Précis: Potentially seminal findings show how circulating cancer-associated fibroblasts can be specifically and uniformly detected in the peripheral blood of patients with metastatic breast cancer, suggesting utility as a blood-borne biomarker for metastatic disease.

CLINICAL STUDIES

4688 Androgen Receptor Upregulation Mediates Radioresistance after Ionizing Radiation
Daniel E. Spratt, Michael J. Evans, Brian J. Davis, Michael G. Doran, Man Xia Lee, Noel Shah, John Wongvipat, Kathryn E. Carnazza, George G. Klee, William Polkinghorn, Donald J. Tindall, Jason S. Lewis, and Charles L. Sawyers
Précis: In prostate cancer patients who receive radiotherapy, monitoring the levels of androgen receptor signaling may identify those most likely to benefit from an androgen-blocking adjuvant therapy in the long term.

INTEGRATED SYSTEMS AND TECHNOLOGIES

4697 Predicting the Response of Breast Cancer to Neoadjuvant Therapy Using a Mechanically Coupled Reaction–Diffusion Model
Jared A. Weis, Michael I. Miga, Lori R. Arlinghaus, Xia Li, Vandana Abramson, A. Bapsi Chakravarthy, Praveen Pendyala, and Thomas E. Yankeelov
Précis: Patient-specific imaging data were used to develop a biomechanical mathematical model that can predict clinical responses of breast cancer to neoadjuvant therapy, a type of care given before tumor resection, which appears to improve survival outcomes.

4699 Kinetic Modeling and Constrained Reconstruction of Hyperpolarized [1-13C]-Pyruvate Offers Improved Metabolic Imaging of Tumors
Précis: A biophysical model was generated to help understand how hyperpolarized pyruvate can be used for metabolic MRI and how this tool can better measure the metabolic state of tumor tissue under baseline or perturbed conditions.

4708 Early Prediction of Cancer Progression by Depth-Resolved Nanoscale Mapping of Nuclear Architecture from Unstained Tissue Specimens
Shikhar Uttam, Hoa V. Pharm, Justin LaFace, Brian Leibowitz, Jian Yu, Randall E. Brand, Douglas J. Hartman, and Yang Liu
Précis: These results introduce a new tool to predict progression of early-stage cancers based on the density of nuclear architecture, addressing unmet clinical needs to more effectively manage the many patients at risk of developing invasive cancers.
MICROENVIRONMENT AND IMMUNOLOGY

4728 Multivalent Forms of the Notch Ligand DLL-1 Enhance Antitumor T-cell Immunity in Lung Cancer and Improve Efficacy of EGFR-Targeted Therapy
Asel K. Biktasova, Duafalia F. Dudimah, Roman V. Uzhachenko, Kyungho Park, Anwari Akhter, Rajeswara R. Arasada, Jason V. Evans, Sergey V. Novitskiy, Elena E. Tchekneva, David P. Carbone, Anil Shanker, and Mikhail M. Dikov

4742 Macrophage Blockade Using CSF1R Inhibitors Reverses the Vascular Leakage Underlying Malignant Ascites in Late-Stage Epithelial Ovarian Cancer
Diana L. Moughon, Huanhuan He, Shiruyeh Schokrpur, Ziyue Karen Jiang, Madeeha Yaqoob, John David, Crystal Lin, M. Luisa Iruela-Arispe, Oliver Dorigo, and Lily Wu

4753 Osteogenic Potential of Mesenchymal Stromal Cells Contributes to Primary Myelofibrosis
Christophe Martinaud, Christophe Desterke, Johanna Konopacki, Lisa Pieri, Frédéric Torossian, Rachel Golub, Sandrine Schmutz, Adrienne Anginot, Bernadette Guerton, Nathalie Rochet, Patricia Albanese, Emilia Henault, Olivier Pierre-Louis, Jean-Baptiste Souraud, Thierry de Revel, Brigitte Dupriez, Jean-Christophe Ianotto, Marie-Françoise Bourgrade, Alessandro M. Vannucchi, Jean-Jacques Lataillade, and Marie-Caroline Le Bousse-Kerdiles

MOLECULAR AND CELLULAR PATHOBIOLOGY

4766 Multiple Myeloma Impairs Bone Marrow Localization of Effector Natural Killer Cells by Altering the Chemokine Microenvironment
Andrea Ponzetta, Giorgia Benigni, Fabrizio Antonangeli, Giuseppe Sciumè, Emilio Sanseviero, Alessandra Zingoni, Maria Rosaria Ricciardi, Maria Teresa Petrucci, Angela Santoni, and Giovanni Bernardini

4778 Merlin/NF2 Suppresses Pancreatic Tumor Growth and Metastasis by Attenuating the FOXM1-Mediated Wnt/β-Catenin Signaling
Ming Quan, Jiujie Cui, Tian Xia, Zhihong Jia, Dacheng Xie, Daoyan Wei, Suyun Huang, Qian Huang, Shaojilang Zheng, and Keping Xie

4790 Radioprotection of IDH1-Mutated Cancer Cells by the IDH1-Mutant Inhibitor AGI-5198
Remco J. Molenaar, Dennis Botman, Myrthe A. Smits, Vashendriya V. Hira, Sanne A. van Lith, Jan Stap, Peter Henneman, Mohammed Khursheed, Krissie Lenting, Adri N. Mul, Dionysia Dimitrakopoulou, Cornelis M. van Drunen, Ron A. Hoebe, Tomas Radivoyevitch, Johanna W. Wilming, Jaroslav P. Maciejewski, W. Peter Vandertop, William P. Leenders, Femmet E. Bleeker, and Cornelis J. van Noorden

Précis: These findings develop mechanistic insight and demonstrate the anticancer prowess in a preclinical model of lung cancer for multivalent forms of the Notch receptor ligand Delta-like-1 as a potential biologic for use in combination immunochemotherapy.

Précis: These striking findings show how blocking macrophage infiltration in late-stage epithelial ovarian cancers can normalize their dysfunctional vasculature, thereby reducing malignant ascites that are responsible for poor treatment outcomes.

Précis: These striking findings show how blocking macrophage infiltration in late-stage epithelial ovarian cancers can normalize their dysfunctional vasculature, thereby reducing malignant ascites that are responsible for poor treatment outcomes.

Précis: These findings strengthen the importance of the bone marrow microenvironment in the development of hematopoietic malignancies, such as primary myelofibrosis, and suggest that therapeutic strategies for this disease should aim to target malignant stromal cells in addition to hematopoietic cells.
Histone Deacetylase HDAC8 Promotes Insulin Resistance and β-Catenin Activation in NAFLD-Associated Hepatocellular Carcinoma

Nrf2 Activation Promotes Keratinocyte Survival during Early Skin Carcinogenesis via Metabolic Alterations
Frank Rolfs, Marcel Huber, Andreas Kurzhe, Stefan Kramer, Eric Haertel, Sukalp Muzumdar, Johanna Wagner, Yasmine Tanner, Friederike Bohm, Sigrun Smola, Nicola Zamboni, Mitchell P. Levesque, Reinhard Dummer, Hans-Dietmar Beer, Daniel Hohl, Sabine Werner, and Matthias Schäfer

Amphiregulin Is a Critical Downstream Effector of Estrogen Signaling in ERα-Positive Breast Cancer

Hypoxia-Induced WSB1 Promotes the Metastatic Potential of Osteosarcoma Cells
Ji Cao, Yijie Wang, Rong Dong, Guanyu Lin, Ning Zhang, Jing Wang, Nengming Lin, Yonghuan Gu, Ling Ding, Meidan Ying, Qiaojun He, and Bo Yang

Src Inhibition Blocks c-Myc Translation and Glucose Metabolism to Prevent the Development of Breast Cancer
Shalini Jain, Xiao Wang, Chia-Chi Chang, Catherine Ibarra-Drendall, Hai Wang, Qingling Zhang, Samuel W. Brady, Ping Li, Hong Zhao, Jessica Dobbs, Matt Kysh, Tomasz S. Tkaczuk, Adrian Ambrose, Christopher Sistrunk, Banu K. Arun, Rebecca Richards-Kortum, Wei Jia, Victoria I. Seewaldt, and Dihua Yu

Multiplex H. pylori Serology and Risk of Gastric Cardia and Noncardia Adenocarcinomas
Ramin Shakeri, Reza Malekzadeh, Dariush Nasrollahzadeh, Michael Pawlita, Gwen Murphy, Farhad Ismaili, Masoud Sotoudeh, Angelika Michel, Arash Etemadi, Lim Waterboer, Hossein Poustchi, Paul Brennan, Paolo Boffetta, Sanford M. Dawsey, Farin Kamangar, and Christian C. Abnet
A Heritable Missense Polymorphism in CDKN2A Confers Strong Risk of Childhood Acute Lymphoblastic Leukemia and Is Preferentially Selected during Clonal Evolution

Kyle M. Walsh, Adam J. de Smith, Helen M. Hansen, Ivan V. Smirnov, Semrita Gorneth, Alyson A. Endicott, Jianqiao Xiao, Terri Rice, Cecilia H. Fu, Lucie S. McCoy, Daniel H. Lachance, Jeanette E. Eckel-Passow, John K. Wientke, Robert B. Jenkins, Margaret R. Wiemels

Précis: A newly identified heritable missense polymorphism in chromosome 9p21.3 that increases risk of childhood leukemia and is preferentially retained within the leukemic blast during tumor cell evolution sheds light on genomic events underlying the emergence of this disease.

Urokinase Receptor Promotes Skin Tumor Formation by Preventing Epithelial Cell Activation of Notch1

Roberta Mazzieri, Giovanni Pietrogrande, Laura Gerasi, Alessandro Gandelli, Piergiuseppe Colombo, Davide Moi, Chiara Brombin, Alessandro Ambrosi, Silvio Danese, Paolo Mignatti, Francesco Blasi, and Silvia D’Alessio

Précis: These findings provide a strong rationale to target a cell surface receptor implicated previously in malignant progression in skin carcinomas as a valid strategy to prevent this disease.

Heightening Energetic Stress Selectively Targets LKB1-Deficient Non–Small Cell Lung Cancers

Milica Momcilovic, Robert McMickle, Evan Abt, Atsuko Seki, Sarah A. Simko, Clara Magyar, David B. Stout, Michael C. Fishbein, Tonya C. Walser, Steven M. Dubinett, and David B. Shackelford

Précis: This biomarker-guided study offers preclinical proof of concept for a personalized and readily translatable clinical strategy to eradicate a common subset of lung adenocarcinomas and squamous cell carcinomas bearing LKB1 and KRAS mutations.

JX06 Selectively Inhibits Pyruvate Dehydrogenase Kinase PDK1 by a Covalent Cysteine Modification

WenYi Sun, Zuoquan Xie, Yifu Liu, Dan Zhao, Zhixiang Wu, Dadong Zhang, Hao Lv, Shuai Tang, Nan Jin, Huailiang Jiang, Minxia Tan, Jian Ding, Cheng Luo, Jian Li, Min Huang, and Meiyu Geng

Précis: These results report a small molecule that targets the enzyme responsible for switching glucose metabolism from mitochondrial oxidation to aerobic glycolysis in cancer cells, a general hallmark of neoplastic transformation termed the Warberg effect, with potentially broad implications for the general treatment of human malignancy.

Inhibition of Casein Kinase 1 Alpha Prevents Acquired Drug Resistance to Erlotinib in EGFR-Mutant Non–Small Cell Lung Cancer

Alexandra B. Lantermann, Dongshu Chen, Kaitlin McCatchoe, Greg Hoffman, Elizabeth Frias, David Ruddy, Daniel Rakic, Joshua Korn, Gregory McAllister, Frank Stegmeier, Matthew J. Meyer, and Sreenath V. Sharma

Précis: These findings suggest that acquired resistance to the EGF receptor kinase inhibitor erlotinib can be prevented by co-inhibiting CK1, a serine/threonine kinase that may be broadly involved in resistance mechanisms to EGF receptor inhibitors used in the clinic.

Identification of Bone-Derived Factors Conferring De Novo Therapeutic Resistance in Metastatic Prostate Cancer

Yu-Chen Lee, Song-Chang Lin, Guoyu Yu, Chien-Jui Cheng, Bin Liu, Hsuan-Chen Liu, David H. Hawke, Nila U. Parikh, Andreas Varkaris, Paul Corn, Christopher L. Logothetis, Robert L. Satcher, Li-Yuan Yu-Lee, Gary E. Gallick, and Sue-Hwa Lin

Précis: These findings deepen the evidence that the tumor stroma contributes significantly to the development of drug resistance in cancer, with specific clinical implications from this study for cancers that spread to bone.

Ras Signaling Is a Key Determinant for Metastatic Dissemination and Poor Survival of Luminal Breast Cancer Patients

Katherine L. Wright, Jessica R. Adams, Jeff C. Liu, Amanda J. Loch, Ruth G. Wong, Christine E.B. Jo, Lauren A. Beck, Divya R. Santhanam, Laura Weiss, Xue Mei, Timothy F. Lane, Sergei B. Koralov, Susan J. Done, James R. Woodgett, Eldad Zacksenhaus, Pingzhang Hu, and Sean E. Egan

Précis: Breast cancers do not tend to involve Ras pathway mutations, but the findings of this study provide preclinical evidence that Ras-targeting therapeutics may offer a supplemental strategy for improving hormone therapy in the treatment of luminal subtypes of this disease.
Mitochondrial Superoxide Dismutase Has a Protumorigenic Role in Ovarian Clear Cell Carcinoma
L.P. Madhubhani P. Hemachandra, Dong-Hui Shin, Usawadee Dier, James N. Iuliano, Sarah A. Engelberth, Larissa M. Uusitalo, Susan K. Murphy, and Nadine Hempel

Précis: This study identifies that enhanced expression of the antioxidant Sod2 is a distinguishing feature of ovarian clear cell carcinoma, which is imperative in maintaining high mitochondrial function and in shifting steady-state ROS balance to enhance tumor progression.

An Imbalance in TAZ and YAP Expression in Hepatocellular Carcinoma Confers Cancer Stem Cell–like Behaviors Contributing to Disease Progression
Hiromitsu Hayashi, Takaaki Higashi, Naomi Yokoyama, Takayoshi Kaida, Keita Sakamoto, Yukiko Fukushima, Takatsugu Ishimoto, Hideyuki Kuroki, Hidetoshi Nitta, Daisuke Hashimoto, Akira Chikamoto, Eiji Oki, Toru Beppu, and Hideo Baba

Précis: These findings describe a compensatory mechanism that allows Hippo signaling to continue to operate during HCC progression, highlighting the need for multitargeted therapies in this setting to achieve complete antitumor responses.

ABOUT THE COVER
Malignant ascites is a common and devastating complication of late stage epithelial ovarian cancer (EOC) that features dysregulated, leaky blood vasculature. Moughon and colleagues show that tumor-associated macrophages (TAM) contribute dominantly to the vascular pathology of EOC malignant ascites. Consequently, blocking TAMs' functions by a selective CSF1R kinase inhibitor (GW2580) reversed the vascular leakage and improved vascular perfusion as indicated by the increased number of perfused, blood carrying (lectin, red) capillaries (CD31+, green). For details, see article by Moughon and colleagues on page 4742.
