Prostaglandin E2 Inhibits p53 in Human Breast Adipose Stromal Cells: A Novel Mechanism for the Regulation of Aromatase in Obesity and Breast Cancer  
Xuyi Wang, Maria M. Docanto, Hiromobu Sasano, Kathleen Cunningham Foundation Consortium for Research into Familial Breast Cancer, Camden Lo, Evan R. Simpson, and Kristy A. Brown

**Pricis**: These results show that in addition to its conventional roles in cell-cycle arrest and apoptosis, p53 may also prevent mammary gland hyperplasia and dysplasia by inhibiting expression of aromatase in breast adipose stromal cells.

656  
β-Catenin Promotes Regulatory T-cell Responses in Tumors by Inducing Vitamin A Metabolism in Dendritic Cells  
Yuan Jong, Indumathi Manoharan, Amol Suryawanshi, Tanmay Majumdar, Melinda L. Angus-Hill, Pandelakis A. Koni, Balaji Manicasamy, Andrew L. Mellor, David H. Munn, and Santhakumar Manicasamy

**Pricis**: In this seminal study, yet another fundamental oncogenic pathway is linked to immune escape, a fundamental driver of malignant conversion that is coordinated with tumor growth, offering new opportunities to reposition cancer cell-centric therapeutic drugs in trials in which they may be more properly conceptualized as immunotherapeutic agents.

666  
Genetic Mutation of p53 and Suppression of the miR-17–92 Cluster Are Synthetic Lethal in Non–Small Cell Lung Cancer due to Upregulation of Vitamin D Signaling  

**Pricis**: These genetic findings suggest that vitamin D receptor agonists may be highly efficacious in p53 mutant lung cancers, a possibility with immediate implications for clinical evaluation.

Suppressing TGFβ Signaling in Regenerating Epithelia in an Inflammatory Microenvironment Is Sufficient to Cause Invasive Intestinal Cancer

Hiroko Oshima, Mizuho Nakayama, Tae-Su Han, Kuniko Naoi, Xiaoli Ju, Yusuke Maeda, Sylvie Robine, Kiichiro Tsuchiya, Toshiro Sato, Hiroshi Sato, Makoto Mark Takeo, and Masanobu Oshima

Précis: These provocative results show how invasive colon cancers can develop simply as a result of chronic inflammation that engenders evolution of immune escape, alongside epithelial cell regeneration that seeks to restore colonic tissue in the face of ongoing inflammation.

LETTER TO THE EDITOR

Cep63 recruits Cdk1 to the Centrosome—Letter
Mohammad Alsara, Harald Löffler, Anne Fechter, Jiri Bartek, and Alwin Krämer

CORRECTION

Correction: AIMP3 Haploinsufficiency Disrupts Oncogene-Induced p53 Activation and Genomic Stability

ABOUT THE COVER

Human neural stem cell (hNSC) transplantation reverses chemotherapy-induced cognitive dysfunction through a mechanism involving the preservation of host neuronal morphology. The image shows Golgi-Cox impregnated neurons in the hippocampus of rats treated with chronic cyclophosphamide and engrafted with hNSCs. Disruptions to overall granule cell and CA1 pyramidal cell neuronal architecture caused by cyclophosphamide were ameliorated in the brains of rats receiving hNSC transplantation when analyzed 2 months posttransplantation. For further details, see article by Acharya and colleagues on page 676.
