BREAKING ADVANCES

183  Highlights from Recent Cancer Literature

CANCER RESEARCH 75TH ANNIVERSARY COMMENTARIES

185  Landmark Study: The Relation of Solar Radiation to Cancer Mortality in North America
    Joseph R. Bertino

186  Commentary on Huggins and Hodges: "Studies on Prostatic Cancer"
    William G. Nelson

REVIEW

188  Lysyl Oxidase, a Targetable Secreted Molecule Involved in Cancer Metastasis
    Thomas R. Cox, Alison Gartland, and Janine T. Erler

MEETING REPORT

193  Meeting Report Europhosphatase 2015: Phosphatases as Drug Targets in Cancer
    Elmer Hoekstra, Maikel P. Peppelenbosch, and Gwenny M. Fuhler

PRIORIT REPORT

197  p73 and IGF1R Regulate Emergence of Aggressive Cancer Stem–like Features via miR-885-5p Control
    Claudia Meier, Philip Hardstock, Sophie Joost, Vijay Alla, and Brigitte M. Pützer

    Précis: These findings offer major new insight into how the p53 family member p73 promotes the pathogenesis of highly malignant cancers, with implications for how to eradicate tumor-initiating cells and overcome drug resistance.

CLINICAL STUDIES

206  Germline BAP1 Mutational Landscape of Asbestos-Exposed Malignant Mesothelioma Patients with Family History of Cancer
    Jill A. Ohar, Mitchell Cheung, Jacqueline Talarchek, Suzanne E. Howard, Timothy D. Howard, Mary Hesdorffer, Hongzhuan Peng, Frank J. Rauscher, and Joseph R. Testa

    Précis: BAP1 genetic testing may help identify individuals from families with a history of mesothelioma who are at higher risk of developing this cancer, but also with greater chances at long-term survival, an unusual pattern.

INTEGRATED SYSTEMS AND TECHNOLOGIES

216  Transcriptome Analysis of Recurrently Deregulated Genes across Multiple Cancers Identifies New Pan-Cancer Biomarkers
    Bogumil Kaczkowski, Yuji Tanaka, Hideya Kawai, Albin Sandelin, Robin Andersson, Masayoshi Itoh, Timo Lassmann, the FANTOM5 consortium, Yoshihide Hayashizaki, Piero Carninci, and Alistair R.R. Forrest

    Précis: This genome-wide expression profiling approach identified new perspectives on DNA repetitive elements, often activated during cancer progression, as candidate biomarkers with pan-cancer potential.

MICROENVIRONMENT AND IMMUNOLOGY

227  Control of PD-L1 Expression by Oncogenic Activation of the AKT–mTOR Pathway in Non–Small Cell Lung Cancer
    Kristin J. Lastwika, Willie Wilson III, Qing Kay Li, Jeffrey Norris, Haiying Xu, Sharon R. Ghazarian, Hiroshi Kitagawa, Shigeru Kawabata, Janis M. Taube, Sheng Yao, Linda N. Liu, Joell J. Gillis, and Phillip A. Dennis

    Précis: This study contributes to the rapidly accumulating evidence that oncogene signaling drives immune escape, implying that anti-oncogenic therapeutic strategies may be useful primarily for leveraging immunochemotherapy combinations.
Table of Contents

239 PD-1 Blunts the Function of Ovarian Tumor–Infiltrating Dendritic Cells by Inactivating NF-κB

Précis: These findings reveal how the immunosuppressive molecule PD-1 blunts the activity of tumor-infiltrating dendritic cells, with important implications for the ongoing development of therapeutic strategies to correct immune escape, including by re-engaging innate immune cells.

251 A Preclinical Model of Malignant Peripheral Nerve Sheath Tumor-like Melanoma Is Characterized by Infiltrating Mast Cells
Michael Holzel, Jennifer Landsberg, Nicole Glodde, Tobias Räld, Meri Rogava, Stefanie Riesenberg, Albert Becker, Goran Jonson, and Thomas Tuting

Précis: These findings highlight the ability to study human melanoma heterogeneity in a mouse model, revealing how melanocyte-melanoma cell interactions contribute to the development of distinct subsets of melanomas within a single individual.

264 Improved Treatment of Breast Cancer with Anti-HER2 Therapy Requires Interleukin-21 Signaling in CD8+ T Cells
Deepak Mittal, Franco Caramia, Stefan Michiels, Heikki Joensuu, Pirkko-Liisa Kellokumpu-Lehtinen, Christos Sotiriou, Sherene Loi, and Mark J. Smyth

Précis: These findings offer a preclinical rationale to boost IL21 signaling in HER2-positive breast cancer patients as a strategy to improve trastuzumab responses and limit the development of drug resistance.

275 PRC2 Epigenetically Silences Th1-Type Chemokines to Suppress Effector T-Cell Trafficking in Colon Cancer
Nisha Nagarsheth, Dongjin Peng, Ilona Kryczek, Ke Wu, Wei Li, Ende Zhao, Lili Zhao, Shuang Wei, Timothy Frankel, Linda Vatan, Wojciech Szeliga, Yuli Dou, Scott Owens, Victor Marquez, Kaixiong Tao, Emina Huang, Guobin Wang, and Weiping Zhou

Précis: A repressive epigenetic program that operates in colon cancer limits the efficiency of effector T cell trafficking to the tumor microenvironment, with implications for improving the efficacy of cancer immunotherapy.

Molecular and Cellular Pathobiology

283 Combined MYC Activation and Pten Loss Are Sufficient to Create Genomic Instability and Lethal Metastatic Prostate Cancer
Grethchen K. Hubbard, Laura N. Mutton, May Khalili, Ryan P. McMullin, Jessica L. Hicks, Daniella Bianchi-Frias, Lucas A. Horn, Ibrahim Kulac, Michael S. Mouhamed, Peter S. Nelson, Sriniwasan Vigneshvaranan, Angelo M. De Marzo, and Charles J. Bieberich

Précis: The mouse model described can recapitulate key histopathologic and molecular features of human prostate cancer, including development of genomic instability and overt metastases to lymph nodes, liver, and lung.

293 HBXIP and LSD1 Scaffolded by IncRNA Hotair Mediate Transcriptional Activation by c-Myc
Yinghui Li, Zhen Wang, Hui Shi, Hang Li, Leilei Li, Rumping Fang, Xiaoli Cai, Bowen Liu, Xiaodong Zhong, and Lihong Ye

Précis: This seminal study defines an oncogenic RNA/protein complex that serves as an effector for c-Myc in activating transcription of its target genes, illuminating long-standing questions concerning how c-Myc drives carcinogenesis.

305 EPHA2 Blockade Overcomes Acquired Resistance to EGFR Kinase Inhibitors in Lung Cancer
Katherine R. Amato, Shan Wang, Li Tan, Andrew K. Hastings, Wensheng Song, Christine M. Lovly, Catherine B. Meador, Fei Ye, Pengcheng Lu, Justin M. Balko, Daniel C. Colvin, Justin M. Cates, William Pao, Nathanael S. Gray, and Jin Chen

Précis: Targeting a cell surface receptor kinase involved in cell-cell interactions appears to mitigate an important pathway of drug resistance in preclinical models of lung cancer, with immediate impact on clinical testing of the discovery.

319 Gender-Specific Molecular and Clinical Features Underlie Malignant Pleural Mesothelioma

Précis: Novel molecular differences associated with gender and histology underlie the development of an asbestos-associated cancer of the outer epithelial lining of the lung, with implications for prognostic outcomes in patients.
### Table of Contents

#### PREVENTION AND EPIDEMIOLOGY

**329** Cyclin D1 Promotes Androgen-Dependent DNA Damage Repair in Prostate Cancer Cells
Mathew C. Casimiro, Gabriele Di Sante, Xiaoming Ju, Zhiping Li, Ke Chen, Marco Crosariol, Ismail Yaman, Michael Gormley, Hui Meng, Michael P. Lisanti, and Richard G. Pestell

**Précis:** These findings shed light on how cyclin D1 promotes DNA damage repair mediated by androgens in the prostate, with potential clinical implications for treating therapy-resistant prostate cancer.

**339** Obesity-Induced Colorectal Cancer Is Driven by Caloric Silencing of the Guanylin–GUCY2C Paracrine Signaling Axis
Jieru E. Lin, Francheska Colon-Gonzalez, Erik Blomain, Gilbert W. Kim, Amanda Aing, Brian Stoecker, Justin Rock, Adam E. Snook, Tingting Zhan, Terry M. Hyslop, Michal Tomczak, Richard S. Blumberg, and Scott A. Waldman

**Précis:** These seminal findings offer the first mechanistic connection between obesity and negation of a universal tumor suppressor pathway in colon tumorigenesis, with immediate implications for a hormone replacement strategy to prevent colorectal cancer in high-risk obese patients.

**347** Peritoneal Dissemination Requires an Sp1-Dependent CXCR4/CXCL12 Signaling Axis and Extracellular Matrix–Directed Spheroid Formation
Yuta Kasagi, Yui Harada, Yosuke Morodomi, Toshiki Iwai, Satoru Saito, Kumi Yoshida, Eiji Oki, Hiroshi Saeki, Kippei Ohgaki, Masahiko Sugiyama, Mitsuho Onimaru, Yoshihiko Maehara, and Yoshikazu Yonemitsu

**Précis:** These findings illuminate mechanisms of peritoneal cancer dissemination, highlighting the Sp1/CXCR4/CXCL12 signaling axis as a rational target for the development of therapeutics to manage this intractable form of malignancy.

**358** SKAP2 Promotes Podosome Formation to Facilitate Tumor-Associated Macrophage Infiltration and Metastatic Progression
Masamitsu Tanaka, Shintaro Shimamura, Sei Kuriyama, Daichi Maeda, Akiteru Goto, and Namiko Aiba

**Précis:** These findings reveal how macrophages infiltrate tumors and enhance metastasis, suggesting a new way to attenuate the tumor-promoting effects of this innate immune cell population in the tumor microenvironment.

#### THERAPEUTICS, TARGETS, AND CHEMICAL BIOLOGY

**370** Skin Cancer Risk Is Modified by KIR/HLA Interactions That Influence the Activation of Natural Killer Immune Cells
Karina A. Vineretsky, Margaret R. Karagas, Brock C. Christensen, Jacquelyn K. Kuriger-Laber, Ann E. Perry, Craig A. Storm, and Heather H. Nelson

**Précis:** These findings reveal associations between hematopoietic-based cancers and activating signals for natural killer immune cells, demonstrating a role for natural killer cell tumor immunity in controlling the most common types of skin cancer.

**377** Characterization of a c-Rel Inhibitor That Mediates Anticancer Properties in Hematologic Malignancies by Blocking NF-κB–Controlled Oxidative Stress Responses
Yusuke Shono, Andrea Z. Tuckett, Hsiou-Chi Liou, Ekaterina Doubrovina, Enrico Derenzini, Samedy Ouk, Jennifer I. Tsai, Odette M. Smith, Emily R. Levy, Fabiana M. Kreines, Carly G.K. Ziegler, Mary I. Scallion, Michael D. Doubrovina, Glenn Heller, Anas Younes, Richard J. O'Reilly, Marcel R.M. van den Brink, and Johannes L. Zakrzewski

**Précis:** These results provide mechanistic insight and preclinical proof of concept for a novel small molecule to treat human lymphoid malignancies, with additional application in recipients of allogeneic bone marrow transplantations to ameliorate graft-versus-host disease, a major clinical challenge.

**380** Maximizing the Efficacy of MAPK-Targeted Treatment in PTEN<sup>LOF</sup>/BRAF<sup>MUT</sup> Melanoma through PI3K and IGF1R Inhibition

**Précis:** These findings reveal that the efficacy of MAPK inhibitors for the treatment of PTEN-deficient and BRAF mutant melanoma can be significantly improved by incorporating pharmacological strategies that also inhibit PI3K and IGF1R signaling.
403 An Anti-EGFR IgA That Displays Improved Pharmacokinetics and Myeloid Effector Cell Engagement In Vivo
Stefan Lohse, Saskia Meyer, Laura A.P.M. Meulenbroek, J.H. Marco Jansen, Maaike Nederer, Anna Kretschmer, Katja Klausz, Uwe Möginger, Stefanie Derer, Thies Rösner, Christian Kellner, Denis Schewe, Peter Sondermann, Sanjay Tiwari, Daniel Kolarich, Matthias Peipp, Jeanette H.W. Leusen, and Thomas Valerius
Précis: Monoclonal antibodies are generally engineered as IgG for therapeutic use, but this study makes a case for how the benefits of an IgA platform to engage myeloid effector cells may offer a useful format for therapeutic development.

418 Neuropilin-2 Regulates Endosome Maturation and EGFR Trafficking to Support Cancer Cell Pathobiology
Samikshan Dutta, Sohini Roy, Navatha S. Polavaram, Marissa J. Stanton, Heyu Zhang, Tanvi Bhola, Pia Hönscheid, Terrence M. Donohue Jr, Hamid Band, Sanjiv K. Bhardwaj, Michael H. Muders, and Kaustubh Datta
Précis: This study deepens the evidence that endocytotic processes, which serve as disease modifiers in cancer, offer candidate targets for broadly managing malignancy.

429 Redirecting Transport of Nanoparticle Albumin-Bound Paclitaxel to Macrophages Enhances Therapeutic Efficacy against Liver Metastases
Tomonori Tanei, Francisca Leonard, Xuewu Liu, Jenolyn F. Alexander, Yuki Saito, Mauro Ferrari, Biana Godin, and Kenji Yokoi
Précis: A method for nanoparticle-mediated delivery of paclitaxel to macrophages within liver metastases can greatly enhance therapeutic efficacy, with immediate implications for clinical translation of the method to improve responses in patients with metastatic liver disease.

440 Treatment of Triple-Negative Breast Cancer with TORC1/2 Inhibitors Sustains a Drug-Resistant and Notch-Dependent Cancer Stem Cell Population
Neil E. Bhola, Valerie M. Jansen, James P. Koch, Hua Li, Luigi Formisano, Janice A. Williams, Jennifer R. Grandis, and Carlos L. Arteaga
Précis: This study describes how triple-negative breast cancer stem-like cells evade killing by P38K/mTOR inhibitors, highlighting the Notch1 signaling pathway as target to enhance responsiveness to these classes of targeted drugs.

453 Effective Targeting of the Survivin Dimerization Interface with Small-Molecule Inhibitors
Jing Qi, Zizheng Dong, Jianguo Liu, Robert C. Peery, Shaobo Zhang, Jing-Yuan Liu, and Jian-Ting Zhang
Précis: These results offer preclinical proof of concept for an anticancer agent that targets an important oncogenic driver, but more generally describes a set of novel in silico screening strategies to therapeutically target oncogenic target proteins that may be considered undruggable.

463 Cancer Cell Dissemination and Homing to the Bone Marrow in a Zebrafish Model
Antonio Sacco, Aldo M. Roccaro, Dongdong Ma, Jiatao Shi, Yuji Mishima, Michele Moschetta, Marco Chiarini, Nikhil Munshi, Robert I. Handin, and Irene M. Ghebrial
Précis: These findings validate zebrafish as a suitable model to monitor cancer cell dissemination and homing to bone marrow, a critical hematopoietic niche, enabling more accessible in vivo investigations of bone metastasis.

472 Imaging, Biodistribution, and Dosimetry of Radionuclide-Labeled PD-L1 Antibody in an Immunocompetent Mouse Model of Breast Cancer
Anders Josefsson, Jessie R. Nedrow, Sunju Park, Sangeeta Ray Banerjee, Andrew Rittenbach, Fabien Jammes, Benjamin Tsui, and George Sgouros
Précis: This study reports a method to image and evaluate the delivery of radiation combined with immune checkpoint therapy to tumors, and thus offers a novel approach for dynamically monitoring therapy responsiveness.

480 A Novel IL6 Antibody Sensitizes Multiple Tumor Types to Chemotherapy Including Trastuzumab-Resistant Tumors
Haihong Zhong, April Davis, Maria Ouzounova, Rosa A. Carrasco, Cai Chen, Shannon Breen, Yong S. Chang, Jiaqi Huang, Zheng Liu, Yihong Yao, Elaine Hurt, Jacques Moisan, Michael Fung, David A. Tice, Shawn G. Clouthier, Zhan Xiao, Max S. Witha, Hasan Korkaya, and Robert E. Hollingsworth
Précis: This study advances the concept that targeting the proinflammatory cytokine IL6 in breast cancers can heighten responses to therapy, including overcoming a major form of drug resistance in this disease, with an improved reagent that deserves clinical investigation.
Interactions between Adipocytes and Breast Cancer Cells Stimulate Cytokine Production and Drive Src/Sox2/miR-302b–Mediated Malignant Progression
Précis: This study identifies feed-forward signaling loops triggered by adipocyte-cancer cell interactions, driving inflammation and malignant growth and offering new therapeutic strategies to target breast cancers associated with obesity.

Correction: A Modeling Approach to Explain Mutually Exclusive and Co-Occurring Genetic Alterations in Bladder Tumorigenesis
