BREAKING ADVANCES

183 Highlights from Recent Cancer Literature

CANCER RESEARCH 75TH ANNIVERSARY

COMMENTARIES

185 Landmark Study: The Relation of Solar Radiation to Cancer Mortality in North America
Joseph R. Bertino

186 Commentary on Huggins and Hodges: "Studies on Prostatic Cancer"
William G. Nelson

REVIEW

188 Lysyl Oxidase, a Targetable Secreted Molecule Involved in Cancer Metastasis
Thomas R. Cox, Alison Gartland, and Janine T. Erler

MEETING REPORT

193 Meeting Report Europhosphatase 2015: Phosphatases as Drug Targets in Cancer
Elmer Hoekstra, Maikel P. Peppelenbosch, and Gwenny M. Fuhler

PRIORITY REPORT

197 p73 and IGF1R Regulate Emergence of Aggressive Cancer Stem–like Features via miR-885-5p Control
Claudia Meier, Philip Hardstock, Sophie Joost, Vijay Alla, and Brigitte M. Pützer

PRÉCIS: These findings offer major new insight into how the p53 family member p73 promotes the pathogenesis of highly malignant cancers, with implications for how to eradicate tumor-initiating cells and overcome drug resistance.

CLINICAL STUDIES

206 Germline BAP1 Mutational Landscape of Asbestos-Exposed Malignant Mesothelioma Patients with Family History of Cancer
Jill A. Ohar, Mitchell Cheung, Jacqueline Talarchek, Suzanne E. Howard, Timothy D. Howard, Mary Hesdorffer, Hongzhuan Peng, Frank J. Rauscher, and Joseph R. Testa

PRÉCIS: BAP1 genetic testing may help identify individuals from families with a history of mesothelioma who are at higher risk of developing this cancer, but also with greater chances at long-term survival, an unusual pattern.

INTEGRATED SYSTEMS AND TECHNOLOGIES

216 Transcriptome Analysis of Recurrently Deregulated Genes across Multiple Cancers Identifies New Pan-Cancer Biomarkers
Bogumil Kaczkowski, Yuji Tanaka, Hideya Kawaji, Albin Sandelin, Robin Andersson, Masayoshi Itoh, Timo Lassmann, the FANTOM5 consortium, Yoshihide Hayashizaki, Piero Carninci, and Alistair R.R. Forrest

PRÉCIS: This genome-wide expression profiling approach identified new perspectives on DNA repetitive elements, often activated during cancer progression, as candidate biomarkers with pan-cancer potential.

MICROENVIRONMENT AND IMMUNOLOGY

227 Control of PD-L1 Expression by Oncogenic Activation of the AKT–mTOR Pathway in Non–Small Cell Lung Cancer
Kristin J. Lastwika, Willie Wilson III, Qing Kay Li, Jeffrey Norris, Haiying Xu, Sharon R. Ghazarian, Hiroshi Kitagawa, Shigeru Kawabata, Janis M. Taube, Sheng Yao, Linda N. Liu, Joell J. Gillis, and Phillip A. Dennis

PRÉCIS: This study contributes to the rapidly accumulating evidence that oncogene signaling drives immune escape, implying that anti-oncogenic therapeutic strategies may be useful primarily for leveraging immunotherapeutic combinations.

329  Cyclin D1 Promotes Androgen-Dependent DNA Damage Repair in Prostate Cancer Cells  
Mathew C. Casimiro, Gabriele Di Sante, Xiaoming Ju, Zhiping Li, Ke Chen, Marco Crossariol, Ismail Yaman, Michael Gormley, Hui Meng, Michael P. Lisanti, and Richard G. Pestell  
Précis: These findings shed light on how cyclin D1 promotes DNA damage repair mediated by androgens in the prostate, with potential clinical implications for treating therapy-resistant prostate cancer.

339  Obesity-Induced Colorectal Cancer Is Driven by Caloric Silencing of the Guanylin–GUCY2C Paracrine Signaling Axis  
Jieru E. Lin, Francheska Colon-Gonzalez, Erik Blomain, Gilbert W. Kim, Amanda Aing, Brian Stoecker, Justin Rock, Adam E. Snook, Tingting Zhan, Tery M. Hyslop, Michal Tomeczak, Richard S. Blumberg, and Scott A. Waldman  
Précis: These seminal findings offer the first mechanistic connection between obesity and negation of a universal tumor suppressor pathway in colon tumorigenesis, with immediate implications for a hormone replacement strategy to prevent colorectal cancer in high-risk obese patients.

347  Peritoneal Dissemination Requires an Sp1-Dependent CXCR4/CXCL12 Signaling Axis and Extracellular Matrix–Directed Spheroid Formation  
Yuta Kasagi, Yui Harada, Yosuke Morodomi, Toshiki Iwai, Satoru Saito, Kumi Yoshida, Eiji Oki, Hiroshi Saeki, Kippei Ohgaki, Satoru Saito, Kumi Yoshida, Eiji Oki, Hiroshi Saeki, Kippei Ohgaki, Masahiko Sugiyama, Mitsuho Onimaru, Yoshihiko Maehara, and Yoshikazu Yonemitsu  
Précis: These findings illuminate mechanisms of peritoneal cancer dissemination, highlighting the Sp1/CXCR4/CXCL12 signaling axis as a rational target for the development of therapeutics to manage this intractable form of malignancy.

358  SKAP2 Promotes Podosome Formation to Facilitate Tumor-Associated Macrophage Infiltration and Metastatic Progression  
Masamitsu Tanaka, Shintaro Shimamura, Sei Kuriyama, Daichi Maeda, Akiteru Goto, and Namiko Aiba  
Précis: These findings reveal how macrophages infiltrate tumors and enhance metastasis, suggesting a new way to attenuate the tumor-promoting effects of this innate immune cell population in the tumor microenvironment.

370  Skin Cancer Risk Is Modified by KIR/HLA Interactions That Influence the Activation of Natural Killer Immune Cells  
Karin A. Vineretsky, Margaret R. Karagas, Brock C. Christensen, Jacquelyn K. Kuriger-Laber, Ann E. Perry, Craig A. Storm, and Heather H. Nelson  
Précis: These findings reveal associations between hematocyte-based cancers and activating signals for natural killer immune cells, demonstrating a role for natural killer cell tumor immunity in controlling the most common types of skin cancer.

377  Characterization of a c-Rel Inhibitor That Mediates Anticancer Properties in Hematologic Malignancies by Blocking NF-κB–Controlled Oxidative Stress Responses  
Yusuke Shono, Andrea Z. Tuckett, Hsiou-Chi Liu, Ekaterina Doubrovina, Enrico Derenzini, Samedy Ouk, Jennifer I. Tsai, Odette M. Smith, Emily R. Levy, Fabiana M. Kreines, Carly G.K. Ziegler, Mary I. Scallion, Mikhail Doubrovin, Glenn Heller, Anas Younes, Richard J. O’Reilly, Marcel R.M. van den Brink, and Johannes L. Zakrzewski  
Précis: These results provide mechanistic insight and preclinical proof of concept for a novel small molecule to treat human lymphoid malignancies, with additional application in recipients of allogeneic bone marrow transplantations to ameliorate graft-versus-host disease, a major clinical challenge.

390  Maximizing the Efficacy of MAPK-Targeted Treatment in PTENLOF/BRAFMUT Melanoma through PI3K and IGF1R Inhibition  
Précis: These findings reveal that the efficacy of MAPK inhibitors for the treatment of PTEN-deficient and BRAF mutant melanoma can be significantly improved by incorporating pharmacological strategies that also inhibit PI3K and IGF1R signaling.
403 An Anti-EGFR IgA That Displays Improved Pharmacokinetics and Myeloid Effector Cell Engagement In Vivo
Stefan Lohse, Saskia Meyer, Laura A.P.M. Meulenbroek, J.H. Marco Jansen, Maaike Nederend, Anna Kretschmer, Katja Klausz, Uwe Mögling, Stefanie Derer, Thies Rösner, Christian Kellner, Denis Schewe, Peter Sondermann, Sanjay Tiwari, Daniel Kolarich, Matthias Peipp, Jeanette H.W. Leusen, and Thomas Valerius
Précis: Monoclonal antibodies are generally engineered as IgG for therapeutic use, but this study makes a case for how the benefits of an IgA platform to engage myeloid effector cells may offer a useful format for therapeutic development.

418 Neuropilin-2 Regulates Endosome Maturation and EGFR Trafficking to Support Cancer Cell Pathobiology
Samikshan Dutta, Sohini Roy, Navatha S. Polavaram, Marissa I. Stanton, Heyu Zhang, Pia Hönscheid, Terrence M. Donohue Jr, Hamid Band, Surinder K. Batra, Michael H. Muders, and Kaustubh Datta
Précis: This study deepens the evidence that endocytotic processes, which serve as disease modifiers in cancer, offer candidate targets for broadly managing malignancy.

429 Redirecting Transport of Nanoparticle Albumin-Bound Paclitaxel to Macrophages Enhances Therapeutic Efficacy against Liver Metastases
Tomonori Tanei, Francisca Leonard, Xuewu Liu, Jenolyn F. Alexander, Yuki Saito, Mauro Ferrari, Biana Godin, and Kenji Yokoi
Précis: A method for nanoparticle-mediated delivery of paclitaxel to macrophages within liver metastases can greatly enhance therapeutic efficacy, with immediate implications for clinical translation of the method to improve responses in patients with metastatic liver disease.

440 Treatment of Triple-Negative Breast Cancer with TORC1/2 Inhibitors Sustains a Drug-Resistant and Notch-Dependent Cancer Stem Cell Population
Neil E. Bhola, Valerie M. Jansen, James P. Koch, Hua Li, Luigi Formisano, Janice A. Williams, Jennifer R. Grandis, and Carlos L. Arteaga
Précis: This study describes how triple-negative breast cancer stem-like cells evade killing by PI3K/mTOR inhibitors, highlighting the Notch1 signaling pathway as target to enhance responsiveness to these classes of targeted drugs.

453 Effective Targeting of the Survivin Dimerization Interface with Small-Molecule Inhibitors
Jing Qi, Zizheng Dong, Jiaxu Liu, Robert C. Peery, Shaobo Zhang, Jing Yuan Liu, and Jian-Ting Zhang
Précis: These results offer preclinical proof of concept for an anticancer agent that targets an important oncogenic driver, but more generally describes a set of novel in silico screening strategies to therapeutically target oncogenic target proteins that may be considered undruggable.

463 Cancer Cell Dissemination and Homing to the Bone Marrow in a Zebrafish Model
Antonio Sacco, Aldo M. Roccaro, Dongdong Ma, Jiantao Shi, Yuji Mishima, Michele Moschetta, Marco Chiariini, Nikhil Munshi, Robert I. Handin, and Irene M. Ghobrial
Précis: These findings validate zebrafish as a suitable model to monitor cancer cell dissemination and homing to bone marrow, a critical hematopoietic niche, enabling more accessible in vivo investigations of bone metastasis.

472 Imaging, Biodistribution, and Dosimetry of Radionuclide-Labeled PD-L1 Antibody in an Immunocompetent Mouse Model of Breast Cancer
Anders Josefsson, Jessie R. Nedrow, Sunju Park, Sangeeta Ray Banerjee, Andrew Rittenbach, Fabien Jammes, Benjamin Tsui, and George Sgouros
Précis: This study reports a method to image and evaluate the delivery of radiation combined with immune checkpoint therapy to tumors, and thus offers a novel approach for dynamically monitoring therapy responsiveness.

TUMOR AND STEM CELL BIOLOGY

480 A Novel IL6 Antibody Sensitizes Multiple Tumor Types to Chemotherapy Including Trastuzumab-Resistant Tumors
Haifong Zhong, April Davis, Maria Ouzounova, Rosa A. Carrasco, Cui Chen, Shannon Breen, Yong S. Chang, Jiaqi Huang, Zheng Liu, Yihong Yao, Elaine Hurt, Jacques Moisan, Michael Fung, David A. Taylor, Shawn G. Clouthier, Zhan Xiao, Max S. Wicha, Hasan Korkaya, and Robert E. Hollingsworth
Précis: This study advances the concept that targeting the proinflammatory cytokine IL6 in breast cancers can heighten responses to therapy, including overcoming a major form of drug resistance in this disease, with an improved reagent that deserves clinical investigation.
491 Interactions between Adipocytes and Breast Cancer Cells Stimulate Cytokine Production and Drive Src/Sox2/miR-302b–Mediated Malignant Progression

Précis: This study identifies feed-forward signaling loops triggered by adipocyte-cancer cell interactions, driving inflammation and malignant growth and offering new therapeutic strategies to target breast cancers associated with obesity.

505 Correction: A Modeling Approach to Explain Mutually Exclusive and Co-Occurring Genetic Alterations in Bladder Tumorigenesis

Overall structure of a survivin dimer with deeply buried dimerization core residues shown by their molecular surface in gray and noncore residues shown by sticks in green. Qi and colleagues show that the deeply buried dimerization core residues in undruggable oncogenic dimeric proteins can be targeted using computational approaches for drug discovery to destroy these proteins. Specifically, a lead small-molecule inhibitor LQZ-7F targeting the dimerization core residues of survivin was discovered that induced proteasome-dependent survivin degradation, mitotic arrest, apoptosis, and blocked the growth of human xenograft tumors. For details, see article by Qi and colleagues on page 453.
