## BREAKING ADVANCES

1243  Highlights from Recent Cancer Literature

## REVIEWS

1245  Interplay between Immune Checkpoint Proteins and Cellular Metabolism

* Sangbin Lim, Joshua B. Phillips, Luciana Madeira da Silva, Ming Zhou, Oystein Fodstad, Laurie B. Owen, and Ming Tan

1250  Recommended Guidelines for Validation, Quality Control, and Reporting of TP53 Variants in Clinical Practice

1261  Advances in the Classification and Treatment of Mastocytosis: Current Status and Outlook toward the Future

* Peter Valenti, Cem Akin, Karin Hartmann, Gunnar Nilsson, Andreas Reiter, Olav Hartmann, Karl Solz, Wolfgang R. Sperr, Luis Escrichano, Tracy I. George, Hanneke C. Kluin-Nelemans, Celalettin Ustun, Massimo Triggiani, Knut Brockow, Jason Gotlib, Alberto Orfao, Lawrence B. Schwartz, Sigurd Brosby-Olsen, Carsten Bindlev-Jensen, Petri T. Kovanen, Stephen J. Galli, K. Frank Austen, Daniel A. Aebischer, Hans-Peter Horny, Michel Arock, and Dean D. Metcalfe

## INTEGRATED SYSTEMS AND TECHNOLOGIES

1271  Systematic Pan-Cancer Analysis Reveals Immune Cell Interactions in the Tumor Microenvironment

* Frederick S. Yawn, Yue Wang, David W. Mullins, Steven Fiering, and Chao Cheng

**PRÉCIS:** This study uses genomic data to deepen our understanding of the interplay between immune cells within the tumor microenvironment, with a specific focus on myeloid cell-driven modulation of CD8+ T cells and their role in patient survival.

## MICROENVIRONMENT AND IMMUNOLOGY

1283  Bone Pain Induced by Multiple Myeloma Is Reduced by Targeting V-ATPase and ASIC3

* Masahiro Hiasa, Tatsuo Okui, Yohance M. Allette, Matthew S. Ripsch, Ge-Hong Sun-Wada, Hiroki Wakabayashi, G. David Roodman, Fletcher A. White, and Toshiyuki Yonedo

**PRÉCIS:** These findings present a mechanistic rationale to relieve the severe bone pain experienced by multiple myeloma patients, with immediate clinical implications for treatment.

1296  A Multifunctional Role for Adjuvant Anti-4-1BB Therapy in Augmenting Antitumor Response by Chimeric Antigen Receptor T Cells

**PRÉCIS:** Combination therapy using an agonistic antibody can significantly enhance CAR T-cell response, concomitant with reduced numbers of immunosuppressive cell types, suggesting a potentially powerful approach to treat solid cancers with adoptive immunotherapy.

1310  Radiation-Induced Enhancement of Antitumor T-cell Immunity by VEGF-Targeted 4-1BB Costimulation

* Brett Schrand, Bhavna Verma, Agata Levy, Shraddha Patel, Iris Castro, Ana Paula Benaduce, Randall Brennerman, Oliver Umland, Hideo Yagita, Eli Gilboa, and Adrian Ishkanian

**PRÉCIS:** Immunomodulatory aptamers can be targeted directly to tumors by binding to radiation-induced tumor stress products, increasing therapeutic index.

1322  Immune Toxicities Elicited by CTLA-4 Blockade in Cancer Patients Are Associated with Early Diversification of the T-cell Repertoire

* David Y. Oh, Jason Cham, Li Zhang, Grant Fong, Serena S. Kwek, Mark Klinger, Malek Faham, and Lawrence Fong

**PRÉCIS:** Autoimmune side effects often seen with immune checkpoint inhibitors are associated with rapid increases in the diversity of the circulating T-cell pool.
Table of Contents

MOLECULAR AND CELLULAR PATHOBIOLOGY

1331 Bone Metastasis of Prostate Cancer Can Be Therapeutically Targeted at the TBX2–WNT Signaling Axis

Précis: These findings provide a mechanism-based targeting rationale to inhibit bone metastasis in advanced prostate cancer, a common feature of late stage disease.

1345 Rbl1 Expression Determines the Differential Effects of Ascorbic Acid in Normal and Cancer Cells
Xiaowei Wei, Yong Xu, Fang Fang Xu, Lukansa Chaiswing, David Schnell, Teresa Noel, Chi Wang, Jingfei Chen, Daret K. St. Clair, and William H. St. Clair

Précis: Changing ROS levels affects levels of the NF-kB transcription factor Rbl1, thereby affecting the capability of i.v. ascorbic acid to differentially and usefully influence the radiosensitivity of normal and cancer tissues.

1357 A Transposon-based Analysis Reveals RASA1 Is Involved in Triple-Negative Breast Cancer

Précis: Allelic loss of Rasa1, a gene controlling the Ras pathway, is a frequent occurrence in triple-negative breast cancer.

1369 Long Noncoding RNA LINC00092 Acts in Cancer-Associated Fibroblasts to Drive Glycolysis and Progression of Ovarian Cancer
Linjie Zhao, Galile Jir, Xiaobing Le, Chenlu Wang, Lian Xu, Min Feng, Yaguang Zhang, Huiliang Yang, Yu Xuan, Yanfei Yang, Lingzi Lei, Qilian Yang, Wayne Bond Lau, Bonnie Lau, Yi Chen, Xiangbing Deng, Shaohua Yao, Tao Yi, Xia Zhao, Yuquan Wei, and Shengtao Zhou

Précis: This study uncovers a positive feedback loop in the metabolism of cancer-associated fibroblasts and epithelial ovarian cancer cells critical for their metastatic progression.

1383 Aberrant Phosphorylation of SMAD4 Thr277-Mediated USP9x–SMAD4 Interaction by Free Fatty Acids Promotes Breast Cancer Metastasis
Yong Wu, Xiaoting Yu, Xianghua Yi, Ke Wu, Sami Dwabe, Mohammad Atefi, Yahya Elshimali, Kevin T. Kemp II, Krutika Bhat, Jesse Haro, Marianna Sarkissyan, and Jaydutt V. Vadgama

Précis: These findings highlight the mechanism behind the increased risk of distant metastatic recurrence in overweight and obese breast cancer patients.

1395 Tumor-Associated Neutrophils and Macrophages Promote Gender Disparity in Hepatocellular Carcinoma in Zebrafish
Chuan Yan, Qiqi Yang, and Zhiyuan Gong

Précis: Increased production of the chronic inflammation factor cortisol contributes to the predominance of liver cancer development in males versus females.

PREVENTION AND EPIDEMIOLOGY

1408 Biomarker Dynamics in B-cell Lymphoma: A Longitudinal Prospective Study of Plasma Samples Up to 25 Years before Diagnosis
Florentin Spith, Carl Wibom, Esmeralda J.M. Krop, Ann-Sofie Johansson, Ingegerd A. Bergdahl, Roel Vermuelen, and Beatrice Melin

Précis: Sustained B-cell activation is a dynamic process during lymphomagenesis that may be indicative of occult disease or disease progression in monitoring patients with indolent lymphomas.

THERAPEUTICS, TARGETS, AND CHEMICAL BIOLOGY

1416 Reprogramming Medulloblastoma-Propagating Cells by a Combined Antagonism of Sonic Hedgehog and CXCR4
Stacey A. Ward, Nicole M. Warrington, Sara Taylor, Najla Kfoury, Jingjin Luo, and Joshua B. Rubin

Précis: These findings suggest a mechanism-based approach to eradicate the most recalcitrant cells in one common type of pediatric brain cancer.

1427 Two-Pore Channel Function Is Crucial for the Migration of Invasive Cancer Cells
Ong Nam Phuong Nguyen, Christian Grimm, Lina S. Schneider, Yu-Kai Chao, Carina Atzberger, Katrin Bartel, Anna Watermann, Melanie Ulrich, Doris Mayr, Christian Wahl-Schott, Martin Biel, and Angelika M. Vollmar

Précis: These findings reveal a role for endolysosomal two-pore channels in leading edge formation in cancer cells, suggesting their novelty as targets for treatment of invasive tumors.

1439 Constitutive NOTCH3 Signaling Promotes the Growth of Basal Breast Cancers
Lisa Choy, Thís J. Hagenbeek, Margaret Solon, Dorothy French, David Finkle, Amy Shelton, Rayna Vennock, Matthew J. Brauer, and Christian W. Siebel

Précis: An antibody that can directly assess receptor signaling distinguishes constitutive and ligand-independent activity of the oncogenic Notch pathway in enabling the malignant growth of basal breast cancers.
Bone Marrow Adipocytes Facilitate Fatty Acid Oxidation Activating AMPK and a Transcriptional Network Supporting Survival of Acute Monocytic Leukemia Cells

Précis: These findings suggest that targeting metabolic abnormalities in leukemia cells located in the bone marrow is potentially promising and innovative therapeutic approach.

Fibrinolytic Enzyme Cotherapy Improves Tumor Perfusion and Therapeutic Efficacy of Anticancer Nanomedicine
Ameya R. Kirtane, Tanmoy Sadhukha, Hyunjoon Kim, Vidhi Khanna, Brenda Koniar, and Jayanth Panyam

Précis: These findings suggest that cotherapy with a fibrinolytic enzyme could be used to improve diffusion, intratumoral distribution, and overall effectiveness of anticancer nanomedicine.

[18F](2S,4R)4-Fluoroglutamine PET Detects Glutamine Pool Size Changes in Triple-Negative Breast Cancer in Response to Glutaminase Inhibition
Rong Zhou, Austin R. Pantel, Shihong Li, Brian P. Lieberman, Karl Ploesl, Hoon Choi, Eric Blankemeyer, Hsiaoju Lee, Hank F. Kung, Robert H. Mach, and David A. Mankoff

Précis: These findings reveal the utility of a noninvasive PET imaging method to monitor pharmacodynamic responses to cancer drugs that target glutamine breakdown.

Prostate Cancer Patients with Late Radiation Toxicity Exhibit Reduced Expression of Genes Involved in DNA Double-Strand Break Repair and Homologous Recombination
Bregje van Oorschot, Lon Uitterhoeve, Ilja Oomen, Rosemarie ten Cate, Ian Paul Medema, Harry Vrieling, Lukas J.A. Stalpers, Perry D. Moerland, and Nicolaas A.P. Franken

Précis: Patients who are inherently less efficient at DNA double-strand break repair may be at risk for severe late radiation toxicity.

Aberrant SYK Kinase Signaling Is Essential for Tumorigenesis Induced by TSC2 Inactivation
Ye Cui, Wendy K. Steagall, Anthony M. Lamattina, Gustavo Pacheco-Rodriguez, Mario Stylianou, Pranav Kidambi, Benjamin Stump, Fernanda Golzarri, Ivan O. Rosas, Carmen Priolo, Elizabeth P. Henske, Joel Moss, and Souheil El-Chemaly

Précis: These results illuminate how mutations in the tumor suppressor gene TSC2 lead to formation of a variety of organ lesions.

Correction: Long Noncoding RNA GCASPC, a Target of miR-17-3p, Negatively Regulates Pyruvate Carboxylase-Dependent Cell Proliferation in Gallbladder Cancer

Correction: Cdk5 Directly Targets Nuclear p21^{CIP1} and Promotes Cancer Cell Growth

Correction: Differential Regulation of the Melanoma Proteome by eIF4A1 and eIF4E
ABOUT THE COVER

Many human tumors are characterized by extensive fibrin deposition in their extracellular matrix. Shown here is a representative image of a human colon tumor section stained for fibrin. For details, see article by Kirtane and colleagues on page 1465.
