Supplementary Figure 3. PEDF reduces tumor volume in a model of primary breast tumors. 
A, Growth curves for control and PEDF-expressing tumors in the mammary fat pad. Black circles= control tumors; grey squares= PEDF tumors. B, Immunofluorescence for a proliferation marker (anti-Ki67, green) and for PEDF (anti-FLAG, red) in a PEDF-expressing tumor 28 days post-implantation. Nuclei were counterstained with DAPI (blue). C, Blood vessel density in mammary fat pad tumors 28 days post-implantation.
