Supplementary Fig. S2. Positive controls for the immunohistological detection of the indicated antigens in adjacent cryosections of an inflammatory tonsil. For pan-melanoma staining, a lymph node metastasis with confirmed expression of the genes expressing the target antigens was used. Positively stained antigens appear in red.
Supplementary Fig. S2 (followed). Negative controls for the immunohistological detection of the indicated antigens in adjacent cryosections of an inflammatory tonsil. For pan-melanoma staining, a lymph node metastasis with confirmed expression of the genes expressing the target antigens was used. The primary antibody was omitted. Positively stained antigens appear in red.
