Supplementary figure legend

S-Figure 1, Combination of Auranofin and MK2206 induced PARP cleavage in H460 cells with re-expression of functional KEAP1. H460 cells were transfected with DsRed-KEAP1 or vector control. Twenty-four hours after transfection, cells were treated with Auranofin, MK2206 or combination for additional 48 hours. Cell lysates were prepared and western blotting was performed with antibody against PARP.
