Sup. Fig. 1: chCD4 T cells are not Treg and chCD4 T cells comprises mostly effector cells
(a): Example of Foxp3 and Helios staining of chCD4 T cells and T-Reg. (b) Proportion of cells expressing Foxp3 (left panel) and Helios (right panel) transcriptional factors in each subset from HD and mUM patients. (c) Correlation between the numbers of effector (CD27⁻) chCD4 (CD127⁻CD25⁻CD4⁺CD3⁺) and total numbers of chCD4 in mUM patients (left panel) and Breast Cancer (BC) patients (right panel).
