Sup. Fig. 4: Phenotype of chCD4 T cells in BC patients before and after neo-adjuvant chemotherapy: (a-c) Numbers of total (a) or effector (b) chCD4 and effector CD8 (c) T cells. p values according to Wilcoxon signed rank tests. (d) Example (corresponding to the red dot in a-c) of phenotype of the effector chCD4 T cells before (pre) and after (post) chemotherapy. (ND: not done) (e) Representative stainings of naïve, memory and effector subsets in chCD4 T cells and proportions of CD28−CD11b+, Ki67+, 2B4+ and HLADR+ in effector chCD4 of BC patients, before (upper panels) and after (lower panels) chemotherapy. (f) MGG coloration of the indicated FACS sorted subsets from PBMCs of BC patients. Arrows indicate cytoplasmic granules. 1000X magnification.
