Miss Raquel Welch

Learn the seven warning signals of cancer. You'll be in good company.

1. Unusual bleeding or discharge.
 2. A lump or thickening in the breast or elsewhere.
 3. A sore that does not heal.
 4. Change in bowel or bladder habits.
 5. Hoarseness or cough.
 6. Indigestion or difficulty in swallowing.
 7. Change in size or color of a wart or mole.
- If a signal lasts longer than two weeks, see your doctor without delay.
- And be sure to have a health checkup once a year, no matter how well you may feel.

Fight Cancer with a checkup and a check
