BECAUSE OF CHEMOTHERAPY KAREN ANDERSON IS A STATISTIC.

THE KIND OF STATISTIC WE LIKE TO BRAG ABOUT.

When Karen was only 18 years old, her doctor discovered she had a deadly form of leukemia. Facing incredible odds, a survival rate of only 3%, Karen spent the next three years in intensive chemotherapy.

Not only was her life at stake, but if she did survive, there were serious questions as to whether she'd be able to have children.

Now, eight years and two sons later, you'd never suspect that this vigorous young mother had battled a disease that kills more than 15,000 Americans every year.

Karen, Brian and Erik are living proof that we're gaining in the fight against cancer. It's a fight we can't afford to lose. It's your donations that help us continue the research, education and rehabilitation programs that will give us more statistics like Karen Anderson. The kind of statistics we can all be proud of.

**SHARE THE
COST OF LIVING** 

Give to the American Cancer Society.
