Groundbreaking work in cancer treatment...

IMMUNOTHERAPY OF HUMAN CANCER

William D. Terry, M.D. and **Steven A. Rosenberg, M.D., Ph.D.**, National Cancer Institute, National Institutes of Health, Bethesda, Maryland, editors

Dr. William D. Terry and Dr. Steven A. Rosenberg have compiled a unique text on the immunotherapy of human cancer which for the first time assembles in a single volume all modern clinical trials of immunotherapy. Oncologists, cancer researchers, immunologists and medical students will find this a valuable source of information on recent and current clinical trials, and on newer approaches to immunotherapy.

The volume contains 70 chapters dealing with immunotherapy for acute myelogenous leukemia, acute lymphocytic leukemia, non-Hodgkin's lymphoma, multiple myeloma, melanoma, and lung, breast, colorectal, genitourinary and gynecologic cancers. Results with interferon and other agents are also presented.

SOME OF THE MOST IMPORTANT WORK FOR CANCER IS BEING DONE OUTSIDE THE LAB.

It's being done in automobiles and living rooms. Over coffee and cake. By people like Madeline Mitza and Theresa Barbieri.

Now, like Theresa, Madeline is bringing help and hope to other women as a Reach to Recovery volunteer.

They met when Madeline was in treatment for breast cancer and Theresa was the volunteer who drove her to her therapy appointments.

Madeline and Theresa are living proof that it's people who give people the will to live. The work in the lab must continue. And so must the work outside. We need your help.

SHARE THE COST OF LIVING

Give to the American Cancer Society.
