*Dr. LaSalle D. Leffall, past president, American Cancer Society.*

## **“If everyone over 50 had checkups for colorectal cancer, the cure rate could be as high as 75%.”**

“If more people had colorectal cancer checkups, more people could be cured,” says Dr. LaSalle D. Leffall, Jr., M.D., F.A.C.S., Professor and Chairman of the Department of Surgery, Howard University Hospital, Washington, D.C. “It’s that simple. You can’t cure it if you don’t know you have it.” But if it’s detected early, the cure rate for colorectal cancer is very high. Your doctor can perform the digital and proctoscopic exams, and you take care of the simple stool blood test at home.

The present cure rate is 44%. We believe it could be at least 31% higher. Since men and women are equally affected by this disease, we urge everyone over 50 to get regular checkups at the intervals specified in the box on the right.

Fact is, there will be 130,000 new cases of colorectal cancer this year. You can help us cure 75% of them.

If you are not in the age group affected, please pass

this information on to someone you know who is. The warning signs for colorectal cancer are: a change in bowel habits and blood in the stool.

People with a family history of colon or rectal cancer or ulcerative colitis are at higher risk and are urged to be doubly cautious.

Help us raise the cure rate.

**Colorectal Cancer Checkup Guidelines for men and women over 50 without symptoms:**

- Digital exam every year
- Stool blood test every year
- Procto exam every 3 to 5 years after 2 initial negative tests 1 year apart.

No one faces  
cancer alone.

**AMERICAN CANCER SOCIETY®**
