Cancer Research

OFFICIAL JOURNAL OF THE AMERICAN ASSOCIATION FOR CANCER RESEARCH

VOLUME 48 • NO. 6 • PP 1381-1695

ISSN 0008-5472 • CNREA 8

University of Miami School of Medicine is accepting applications and nominations for the position of director of the Papanicolaou Comprehensive Cancer Center, to succeed Dr. Gordon Zubrod, who is retiring. The individual must possess a record of research accomplishment and demonstrate administrative and leadership capability.

This position is tenured, the candidate should have an M.D. or Ph.D. degree, and qualify for professor level in their respective discipline. The director's charge is to initiate and enhance the cancer effort by developing and facilitating interdisciplinary programs in the areas of clinical care, research, and education for the school and community.

Please send correspondence and c.v. to Gerard A. Kaiser, M.D., Chairman Search Committee for Comprehensive Cancer Center, University of Miami, Cardiovascular Surgery (R114), Miami, 33101.

CANCER. IT'S SIMPLY NOT WHAT IT USED TO BE.

Over the last 40 years, research programs supported by the American Cancer Society have made increasing progress in the treatment, detection and prevention of cancer.

In 1986 alone, the Society funded over 700 projects conducted by the most distinguished scientists and research institutions in the country.

Which is why, this year, hundreds of thousands of people will be successfully treated for the disease.

We are winning.

But we need you to help keep it that way.

\$500,000,000 OF RESEARCH HELPED CLIFF SHAW PLAY BASEBALL AT AGE 85.

In November 1973, Cliff Shaw was stricken with cancer.

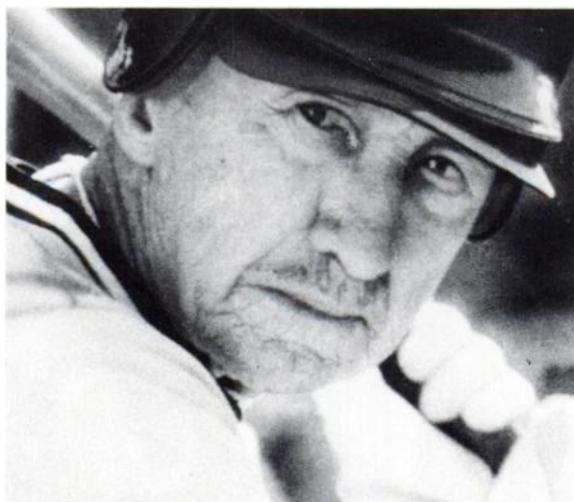

Fortunately, it was detected early enough. And with surgery, Cliff was able to continue living a healthy, active life.

There was a time when such a diagnosis was virtually hopeless.

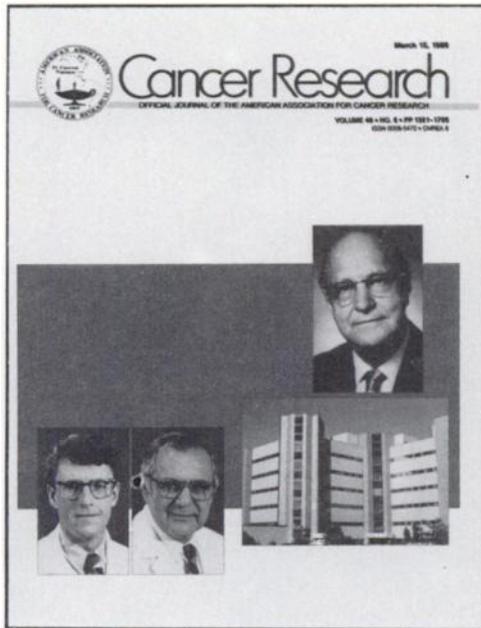

But today, cancer is being beaten. Over the years, we've spent \$500,000,000 in research. And we've made great strides against many forms of cancer.

With early detection and treatment, the survival rate for colon and rectal cancer can be as high as 75%. Hodgkin's disease, as high as 74%. Breast cancer, as high as 90%.

Today, one out of two people who get cancer gets well. It's a whole new ball game.

COVER LEGEND

Our cover in this issue features a second monument to Harold P. Rusch, a giant figure in the history of cancer research. Earlier issues of *Cancer Research* (29: 4, 1969; 33: 7, 1973) have paid tribute to his scientific acumen and leadership in making the McArdle Laboratory known throughout the world for its superlative staff, a fountainhead of progress, and a training ground for distinguished cancer scientists. After having pursued an outstanding scientific and administrative career as founder in 1946 and director until 1972 of the McArdle Laboratory, Rusch devoted his energy to founding and directing the Wisconsin Clinical Cancer Center.

Aware of the need for bringing the latest advances from the laboratory to the cancer patient, Rusch was

a leader in the movement to expand the nation's attack on cancer. Through membership on a U. S. Senate committee of consultants he was influential in recommending to Congress and their passage of the National Cancer Act in 1971. This Act called for an expanded national program, including creation of 15 comprehensive cancer centers. The Wisconsin Clinical Center was approved by the National Cancer Institute in 1973 and was constructed with grants from the National Cancer Institute, the State of Wisconsin, and the Wisconsin Alumni Foundation. It is a six-story structure adjoining the University Clinics and is devoted entirely to laboratories for experimental and clinical studies, outpatient clinics, and radiotherapy. It is a department of the University and has programs in breast cancer, immunomodulation, urological cancer, and cancer prevention. These comprise interdisciplinary teams in pharmacology, endocrinology, cell and radiobiology, radiotherapy, medical oncology, and surgery. Current faculty consists of 35 M.D.s and Ph.D.s and a total staff of 275.

Rusch directed the Center from 1972 until 1976, when he retired with the title of Emeritus Professor of Human Oncology. During his distinguished career he was editor of *Cancer Research*, 1950 to 1965, and President of the Association in 1954. He was a member of the National Advisory Cancer Board and is active in the American Cancer Society as a life member of their Board of Directors.

The current director of the Center is Paul P. Carbone, a renowned clinical oncologist. Pictured are Rusch (*top*) and, *left to right*, Timothy Kinsella, Carbone, and the Center. Kinsella is the newly appointed chairman of the department of human oncology. We are indebted to V. Craig Jordan for much information and the photographs.
