MRE11 Expression Is Predictive of Cause-Specific Survival following Radical Radiotherapy for Muscle-Invasive Bladder Cancer
Ananya Choudhury, Louisa D. Nelson, Mark T.W. Teo, Sameer Chilka, Selina Bhattacharai, Colin F. Johnston, Faye Elliott, Johanna Lowery, Claire F. Taylor, Michael Churchman, Johanne Bentley, Margaret A. Knowles, Patricia Harnden, Robert G. Bristow, D. Timothy Bishop, and Anne E. Kiltie

Précis: Findings define a biopsy marker that may predict the type of therapy most likely to cure individual patients of invasive bladder cancer.

The Promise of MicroRNA Replacement Therapy
Andreas G. Bader, David Brown, and Matthew Winkler

Précis: Study illustrates how cytotoxic nanoparticle therapies can incorporate an approved MRI contrast agent for superior noninvasive imaging in vivo, easing analysis of preclinical and clinical pharmacology.

The Sympathetic Nervous System Induces a Metastatic Switch in Primary Breast Cancer

Précis: Metastasis promoted by macrophages may be assisted by the sympathetic nervous system and thus blocked by drugs that antagonize adrenergic signaling.

Quantitative Imaging of Lymphatic Function with Liposomal Indocyanine Green
Steven T. Proulx, Paola Luciani, Stefanie Derzsi, Matthias Rinderknecht, Viviane Mumprecht, Jean-Christophe Leroux, and Michael Detmar

Précis: Quantitative noninvasive imaging of lymphatic flow will greatly assist the study of experimental cancer drugs being developed to target lymphatics, as well as the ability to image lymphedema and sentinel lymph nodes in cancer.

Loss of Osteoclasts Contributes to Development of Osteosarcoma Pulmonary Metastases
Liliana Endo-Munoz, Andrew Cumming, Danny Rickwood, Danielle Wilson, Claudia Cueva, Charlotte Ng, Geoffrey Strutton, A. Ian Cassidy, Andreas Evdokiou, Scott Sommerville, Ian Dickinson, Alexander Guminski, and Nicholas A. Saunders

Précis: Findings suggest that osteoclast-preserving therapies may help prevent or delay metastatic development in osteosarcoma.
Hyaluronan Deficiency in Tumor Stroma Impairs Macrophage Trafficking and Tumor Neovascularization
Nobutaka Kobayashi, Seiji Miyoshi, Takahide Mikami, Hiroshi Koyama, Masato Kitazawa, Michiko Takeoka, Kenji Sano, Jun Amano, Zenzo Isogai, Shumpei Niida, Kayoko Oguri, Minoru Okayama, John A. McDonald, Koji Kimata, Shun'ichiro Taniguchi, and Naoki Itano

Précis: Stromal hyaluronan serves as a microenvironmental signal for recruitment of tumor-associated macrophages, which are key cells involved in tumor neovascularization.

DACARBazine Treatment before Peptide Vaccination Enlarges T-Cell Repertoire Diversity of Melan-A–Specific, Tumor-Reactive CTL in Melanoma Patients
Belinda Palermo, Duilia Del Bello, Alessandra Sottini, Federico Serana, Claudia Ghidini, Novella Gualtieri, Virginia Ferraresi, Caterina Catricalà, Filippo Belardelli, Enrico Proietti, Pier Giorgio Natali, Luisa Imberti, and Paola Nisticò

Précis: Clinical findings support the concept that the use of chemotherapy before a cancer vaccine can promote renewal of tumor-reactive T cells and extend survival.

IFNγ Markedly Cooperates with Intratumoral Dendritic Cell Vaccine in Dog Tumor Models
Kai Mito, Kikuya Sugiura, Kana Ueda, Takako Hori, Takashi Akazawa, Jyoji Yamate, Hiroshi Nakagawa, Shingo Hatoya, Muneo Inaba, Norimitsu Inoue, Susumu Ikehara, and Toshio Inaba

Précis: Findings suggest a mechanism through which caveolin-1 can mediate antitumor effects in melanoma.

Chemotherapy-Induced Genotoxic Stress Promotes Sensitivity to Natural Killer Cell Cytotoxicity by Enabling Missing-Self Recognition
Jason H. Fine, Peter Chen, Aruz Mesci, David S.J. Allan, Stephan Gasser, David H. Raulet, and James R. Carlyle

Précis: Genotoxic and cell-stressing chemicals sensitize tumor cells to MHC-independent missing-self recognition by NK cells.
BRCA1-Associated Epigenetic Regulation of p73 Mediates an Effector Pathway for Chemosensitivity in Ovarian Carcinoma
Nageatte Ibrahim, Lei He, Chee-Ann Leong, Deyin Xing, Beth Y. Karlan, Elizabeth M. Swisher, Bo R. Rueda, Sandra Orsulic, and Leif W. Ellisen

Précis: Results define a regulatory mechanism that supports contributions of the p53-related protein p73 as a key mediator of the response to platinum chemotherapy in certain ovarian carcinomas.

Cyclin-Dependent Kinase–Mediated Phosphorylation Plays a Critical Role in the Oncogenic Functions of PELP1
Binoj C. Nair, Sujit S. Nair, Dimple Chakravarty, Rambabu Challa, Bramanandam Manavathi, P. Renee Yew, Bakesh Kumar, Rajeshwar Rao Tekmal, and Ratna K. Vadlamudi

Précis: Results define a key intersection between cell cycle control and estrogen receptor signaling that has implications for breast cancer progression.

Oncogenic Wip1 Phosphatase Is Inhibited by miR-16 in the DNA Damage Signaling Pathway
Xinna Zhang, Guohui Wan, Sizolwenkosi Mlotshwa, Vicki Vance, Franklin G. Berger, Hexin Chen, and Xiongbin Lu

Précis: Findings define a mechanism by which a DNA damage-induced microRNA controls a nodal regulator of DNA damage signaling.

Relationship between Radiation Exposure and Risk of Second Primary Cancers among Atomic Bomb Survivors
Christopher I. Li, Nobuo Nishi, Jean A. McDougall, Erin O. Semmens, Hiromi Sugiyama, Midori Soda, Ritsu Sakata, Mikiko Hayashi, Fumiyoshi Kasagi, Akihiko Suyama, Kiyohiko Mabuchi, Scott Davis, Kazumori Kodama, and Kenneth J. Kopecky

Précis: Individuals with substantial exposure to radiation who are diagnosed with a first primary cancer should be carefully screened for second primary cancers, particularly those that are radiation sensitive.

Human Papillomavirus Seropositivity Synergizes with MDM2 Variants to Increase the Risk of Oral Squamous Cell Carcinoma
Xiongming Chen, Erich M. Sturgis, Dapeng Lei, Kristina Dahlstrom, Qingyi Wei, and Guojun Li

Précis: Findings define a genetic marker elevating susceptibility to HPV-associated oral cancers, particularly in never smokers, never drinkers, and oropharyngeal cancer patients.

Ligand-Independent Toll-like Receptor Signals Generated by Ectopic Overexpression of MyD88 Generate Local and Systemic Antitumor Immunity
Zachary C. Hartman, Takuya Osada, Oliver Glass, Xiao Y. Yang, Gang-jun Lei, H. Kim Lyerly, and Timothy M. Clay

Précis: Ectopic expression of a common TLR adapter signaling protein can exert all the benefits of TLR signaling to antitumor immunity.

Differential Mechanisms of Acquired Resistance to Insulin-like Growth Factor-1 Receptor Antibody Therapy or to a Small-Molecule Inhibitor, BMS-754807, in a Human Rhabdomyosarcoma Model
Fei Huang, Warren Hurlburt, Ann Greer, Karen A. Reeves, Stephen Hillerman, Han Chang, Joseph Fargnoli, Friedrich Graf Finckenstein, Marco M. Gottardis, and Joan M. Carboni

Précis: Study offers the first definition and comparison of acquired resistance mechanisms for IGF-1R targeted therapies.

Discovery and Canine Preclinical Assessment of a Nontoxic Procaspase-3–Activating Compound
Quinn P. Peterson, Danny C. Hsu, Chris J. Novotny, Diana C. West, Dewey Kim, Joanna M. Schmit, Levent Dirikolu, Paul J. Hergenrother, and Timothy M. Fan

Précis: Findings demonstrate that direct activation of procaspase-3 by a small molecule can be well tolerated and efficacious as an anticancer strategy.

A Specific Need for CRKL in p210BCR-ABL–Induced Transformation of Mouse Hematopoietic Progenitors

Ji-Heui Seo, Lisa J. Wood, Anupriya Agarwal, Thomas O'Hare, Collin R. Elsea, Ian J. Griswold, Michael W.N. Deininger, Akira Imamoto, and Brian J. Druker

Précis: Results reveal a previously undefined linkage in BCR-ABL effector signaling that is essential to drive transformation of hematopoietic progenitor cells.

Modifying Akt Signaling in B-Cell Chronic Lymphocytic Leukemia Cells

Sebastian W. Hofbauer, Josefina D. Piñón, Gabriele Brachtl, Lucia Haginger, Wei Wang, Karin Jöhrer, Ingeborg Tinhofer, Tanja Nicole Hartmann, and Richard Greil

Précis: A survival pathway in chronic lymphocytic leukemia responding to antigenic and stromal support might be targeted by disrupting an Akt pathway mediating this support.

ABOUT THE COVER

Chronic stress promotes adrenergic-dependent infiltration of macrophages into primary mammary tumors, leading to enhanced metastasis. In an immunofluorescence analysis, anti–β2-adrenergic receptor (green), anti-F4/80 (red), and nuclear counterstaining (blue) were used to visualize 66cl4 mammary tumor cryosections from control and stressed mice. For details, see the article by Sloan and colleagues on page 7042 of this issue.
