### Table of Contents

**BREAKING ADVANCES**

3197 Highlights from Recent Cancer Literature

**REVIEW**

3199 Sialic Acids Sweeten a Tumor’s Life
Christian Büll, Marieke A. Stoel, Martijn H. den Brok, and Gosse J. Adema

**MICROENVIRONMENT AND IMMUNOLOGY**

3205 Immune-Based Antitumor Effects of BRAF Inhibitors Rely on Signaling by CD40L and IFNγ
Ping-Chih Ho, Katrina M. Meeth, Yao-Chen Tsui, Bhaskar Srivastava, Marcus W. Bosenberg, and Susan M. Kaech

Précis: The robust antitumor properties of B-Raf kinase inhibitors appear to relate to an ability to correct immune escape, suggesting new uses for these drugs in cancer treatment through combination with active immunotherapies.

**MOLECULAR AND CELLULAR PATHOBIOLOGY**

3218 p53 Is Positively Regulated by miR-542-3p
Yemin Wang, Jen-Wei Huang, Maria Castella, David George Huntsman, and Toshiyasu Taniguchi

Précis: These findings define a microRNA that potently activates p53 and suppresses ribosome biogenesis, defining a novel core regulatory pathway in cell proliferation and survival.

3228 Global Transcriptome Analysis of Formalin-Fixed Prostate Cancer Specimens Identifies Biomarkers of Disease Recurrence

Précis: This study defines a novel biomarker panel that outperforms existing technology, with the potential to improve the clinical management of prostate cancer by predicting patients who are likely to progress to advanced metastatic disease.

3238 Colorectal Cell Lines Are Representative Models of the Main Molecular Subtypes of Primary Cancer
Dmitri Mouradov, Clare Sloggett, Robert N. Jorissen, Christopher G. Love, Shan Li, Antony W. Burgess, Diego Arango, Robert L. Strausberg, Daniel Buchanan, Samuel Wormald, Liam O’Connor, Jennifer L. Wilding, David Bicknell, Ian P.M. Tomlinson, Walter F. Bodmer, John M. Mariadason, and Oliver M. Sieber

Précis: This study positively addresses the question of how well in vitro-established colorectal cancer cell lines represent primary human tumors, in the absence of any stromal or organismal context, providing a genome-level validation that supports their continued use as tools to investigate colorectal cancer biology and drug responses.

**PREVENTION AND EPIDEMIOLOGY**

3248 Insulin, Estrogen, Inflammatory Markers, and Risk of Benign Proliferative Breast Disease
Chelsea Catsburg, Marc J. Guiter, Chu Chen, Michele L. Cote, Geoffrey C. Kabat, Rami Nassir, Lesley Tinker, Jean Wactawski-Wende, David L. Page, and Thomas E. Rohan

Précis: This study identifies independent risk factors for benign proliferative breast disease, suggesting that these factors directly influence the early stages of breast cancer development.

3259 Noninvasive Urinary Metabolomic Profiling Identifies Diagnostic and Prognostic Markers in Lung Cancer
Ewy A. Mathé, Andrew D. Patterson, Majda Hazanar, Soumen K. Manna, Kristopher W. Krausz, Elise D. Bowman, Peter G. Shields, Jeffrey R. Idle, Philip B. Smith, Katsuhiro Anami, Dickran G. Kazandjian, Emmanuel Hatzakis, Frank J. Gonzalez, and Curtis C. Harris

Précis: Global metabolomics can be used to uncover novel metabolites detected in urine and lung tumor tissue, which have diagnostic and prognostic utility.
THERAPEUTICS, TARGETS, AND CHEMICAL BIOLOGY

3271 Novel Polymeric Nanoparticles for Intracellular Delivery of Peptide Cargos: Antitumor Efficacy of the BCL-2 Conversion Peptide NuBCP-9
Manoj Kumar, Dikshi Gupta, Gurpal Singh, Sapna Sharma, Madhusudan Bhat, C.K. Prashant, A.K. Dinda, Surender Kharbanda, Donald Kufe, and Harpal Singh

Precis: Striking demonstrations of in vivo efficacy are a highlight of this study, which reports an effective nanoparticle formulation for sustained delivery of anticancer peptides to target intracellular oncoproteins.

3282 Notch3 Pathway Alterations in Ovarian Cancer
Wei Hu, Tao Liu, Cristina Ivan, Yunjie Sun, Jie Huang, Lingegowda S. Mangala, Takahito Miyake, Heather J. Dalton, Sunila Pradeep, Rajesh Rupaimoole, Rebecca A. Previs, Hee Dong Han, Justin Bottsford-Miller, Behrouz Zand, Yu Kang, Chad V. Pecot, Alpa M. Nick, Sherry Y. Wu, Ju-Seog Lee, Vasudha Sehgal, Prahald Ram, Jinsong Liu, Susan L. Tucker, Gabriel Lopez-Berestein, Keith A. Baggerly, Robert L. Coleman, and Anil K. Sood

Precis: These findings identify previously unknown mechanisms underlying an important signaling pathway in serous ovarian cancers, identifying new biomarker-driven approaches for therapy.

3294 Inhibiting Tankyrases Sensitizes KRAS-Mutant Cancer Cells to MEK Inhibitors via FGFR2 Feedback Signaling
Marie Schoumacher, Kristen E. Hurov, Joseph Lehar, Yan Yan-Neale, Sherry Y. Wu, Jianxin You

Precis: This study addresses the long-standing challenge of developing highly effective therapeutics against KRAS-mutant cancers, also identifying a strategy to suppress a newly discovered resistance mechanism.

TUMOR AND STEM CELL BIOLOGY

3306 Separating Tumorigenicity from Bile Acid Regulatory Activity for Endocrine Hormone FGF19
Mei Zhou, Xueyan Wang, Van Phung, Darrin A. Lindhout, Kalyani Mondal, Jer-Yuan Hsu, Hong Yang, Mark Humphrey, Xunshan Ding, Taruna Arora, R. Marc Learned, Alex M. DePaoli, Hui Tian, and Lei Ling

Precis: These results conclusively link the cancerous properties of the FGF19–FGFR4 pathway in liver to STAT3 activation, with potential implications for how to improve the treatment of chronic liver disease and cancer.

3317 IDH1 Mutations Alter Citric Acid Cycle Metabolism and Increase Dependence on Oxidative Mitochondrial Metabolism
Alexandra R. Grassian, Seth J. Parker, Shawn M. Davidson, Aji S. Divakaruni, Courtney R. Green, Xiang Zhang, Kelly L. Slocum, Minying Pu, Fallon Lin, Chad Vickers, Carol Joud-Caldwell, Franklin Chung, Hong Yin, Erika D. Handly, Christopher Straub, Joseph D. Grownney, Matthew G. Vander Heiden, Anne N. Murphy, Raymond Pagliarini, and Christian M. Metallo

Precis: These results suggest therapeutic opportunities to exploit a set of metabolic vulnerabilities specific to IDH1 mutation in cancer cells.
3357 Transient Induction of ING4 by Myc Drives Prostate Epithelial Cell Differentiation and Its Disruption Drives Prostate Tumorigenesis

Penny L. Berger, Sander B. Frank, Veronique V. Schulz, Eric A. Nollet, Matthew J. Edick, Brittany Holly, Ting-Tung A. Chang, Calen Hostetter, Suwon Kim, and Cindy K. Miranti

Précis: This study identifies a pivotal signaling node that may explain why MYC and PTEN inactivation cooperate in prostate tumorigenesis.

3369 E2F1 Responds to Ultraviolet Radiation by Directly Stimulating DNA Repair and Suppressing Carcinogenesis

Anup Kumar Biswas, David L. Mitchell, and David G. Johnson

Précis: This article defines a nontranscriptional function in DNA repair for the core cell-cycle regulatory transcription factor E2F1.
