

Figure S2. Enumeration of CD34+CD45-CD31- cells in different tissues of C57BL/6 mice bearing tumors. Matched numbers of viable WAT SVF cells and cells from other tissues were gated first on CD31-CD45- cells and then on CD34+ cells (ASC in WAT) as in Fig. 1B. SSC-A: side scatter. Gates were set based on the isotype IgG controls separately for each tissue.
